In October, 1921, a committee was appointed under the presidency of the Hon Mr A. P. Muddiman, I.C.S. to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class who were also justices of the peace, and by judges of the Sessions Courts, but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions. This decision, embodied in the 'Libert Bill', aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey (India): "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884 by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains, but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This

provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions Judge has the right, however trivial be the charge to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans. Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered. Since 1886 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—“That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee should be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals. As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (55443-463) the new Chapter XXXIII (55443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code.

High Courts

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown, they hold office during the pleasure of the Sovereign, at least one-third of their number are barristers, one third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more Judges, in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all

the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates in the Presidency towns. Frequent magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions, on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district* as District Judge he presides in its principal civil court of original jurisdiction, its functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs 500 in the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs 2,000. As in solvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns in the most similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Cotons are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by juries.

Legal Practitioners

Legal practitioners in India are divided into Barristers-at Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts, and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons only qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex-officio*, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts similar machinery is generally in use. Funding an opportunity of detailed inquiries in India, these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1923 relating to the constitution of Bar Councils for the several High Courts in India have been recently adopted by the Indian Bar Courts Act, XXXVIII of 1926.

Composition of the Bar

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development: "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 160 solicitors, of whom more than 180 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the remainder Indian."

Law Officers.

The Government of India has its own law colleagues in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the

local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister). The United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate. The Punjab has a Legal Remembrancer Government Advocate and a Junior Government Advocate, and Burma a Government Advocate, besides a Secretary to the Legal Legislative Council. Sheriffs are attached to the High Courts of Calcutta, Madras, and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General in Council. They contain cases determined by the High Courts and by the Judicial Committee on appeal from the particular High Courts. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1898. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power

The supreme power of Parliament to legislate for the whole of India cannot be questioned in practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q.v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the semindars and to place it on Government. He ordered the District Judges of Bengal in 1792 to open a Thana (Police Station) for every 400 square miles of their jurisdiction and to appoint stipendiary thanadars (Police Station Officers) and subordinates.

In Madras in 1816 Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Presidency.

In Khandaesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police, and Sir George Clerk Governor of Bombay in 1843, applied the lesson by appointing full time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1858 which showed that 3 Collectors had no time for real police superintendence. In 1859 the principle of full time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and reorganisation, and the Madras Act was mainly followed in India Act V of 1861. An Act for the Regulation of Police, which still governs police working everywhere in India except Madras and Bombay, which has its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delhi Imperial Area Police and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned, subject only to the general control of the Governor General.

Within the Local Government area the police are enrolled and organised in District forces at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary, and Police Station Officers may also be dismissed by the D.S.P.

The D S P is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of law and the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police, Inspector-General of Police, and Home Department. Generally speaking, the D S P has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C I B.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as Criminal Investigation Departments and work under a Deputy Inspector General. They collate information about crime edit the *Crimes Gazette*, take over from the District Police crimes with ramifications into several jurisdictions and they control the working of such scientific police developments as the Finger Print Identification Bureau.

Headquarters and Armed Police.—At the chief town of each District the D S P has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D S P are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 303 service rifles. At most head quarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are Thana and Thanadar. It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a motuall hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers the Thanadar who like police of all ranks, is supposed to be always on duty is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are cognisable by the police. The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the thanadar succeeds in establishing a *prima facie* case against the accused the prosecution in court is conducted free of charge by a police prosecutor, who is generally a junior pleader, engaged by Government to conduct police cases in the lower courts. Cases committed

to the Sessions are conducted by the Public Prosecutor or one of his Assistants and the reports of these officers and the comments of the judge are a means for the D S P to know whether his thanadars are doing their work properly.

Out Posts.—When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile, the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant thana. The secret of good mofussil police working in normal times is dispersion. A single policeman however junior represents the rule of law and is an agent of Government.

The Chain of Promotion.—Ordinarily the constable may aspire to become a jamadar or with ability and luck a Police Station Officer or even Inspector. The directly recruited matriculate who comes in through the Police Training School as a Thanadar may ordinarily become an Inspector or a Deputy Superintendent or exceptionally a Superintendent. The direct Deputy an officer reserved for Indians has a good chance of becoming Superintendent, and perhaps Deputy Inspector General. The direct Assistant Superintendent whether from England or from India is sure of a Superintendence and has chances of D I G after 25 years service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund.

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is superimposed in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready not only from this cause, but also because Presidency Magistrates can give upto six months or Rs 200 fine summarily, without formal record of proceedings and if only whipping or fine up to Rs 200 is inflicted there need be not even any statement of reasons for the conviction.

Round Figures.—The process of reorganisation and retrenchment goes on ceaselessly, annual administration reports for the ten major provinces and four minor administrations appeared tardily and there are no unified statistics for the police of India and Burma. The following figures are therefore merely to be regarded as approximations, giving a general idea of the numbers of police and the volume of work put through yearly.—There are about 30,000 Military Police, chiefly in Burma, Assam, and Bengal, and these cost about one and a third crores. The maintenance of them is a departure from the principles laid down by the 1860 Commission and the 1861 Act.

Provincial Police including Burma total about 200,000 and cost ten and a half crores or an average of about one crore per major Province.

There are about 10,000 Thanas or Police Stations which annually investigate from five to six thousand murders, four thousand dacoities, twenty five thousand cattle thefts, one hundred and seventy thousand ordinary thefts and as many burglaries. They place on trial every year about three-quarters of a million persons, of whom about half a million or more are convicted. The jail population of India which is over a hundred thousand consists of many habituals who on release proceed to prey on the public until such time as the police again secure their conviction and incarceration.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas, but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognisable crime —

JAILS

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement) and simple imprisonment. Accommodation has also to be provided in the jails for civil and under trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission which consisted of only two members both officials serving under the Government of India, is strikingly long, and reviews the whole question of jail organisation and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected or have been modified. In some cases they have been abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission is the one that might in fact be described as the corner stone of their report is that there should be in each Presidency three classes of jails. In the first place, large central jails for convicts sentenced to more than one year's imprisonment as in central district jails at the headquarters of districts, and thirdly, subsidiary jails and 'lock ups' for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General. He is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and wardens, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1915, says — "The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the inefficiency of Central Prisoners and the difficulty of obtaining good and sufficient wardens."

The Jails Committee.—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments and is subject

to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led lately to the appointment of a Jails Committee which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation, of recruiting a better class of wardens, of providing education for prisoners and of developing prison industries so as to meet the needs of the economy. Departments of Government. Other important recommendations included the separation of civil from criminal offenders, the adoption of the English system of release on license in the case of adolescents and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners, the provision of separate accommodation for prisoners under trial, the institution of the star class system and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls but extramural employment on a large scale is sometimes allowed as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multihand employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles, the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as 'minor'. Among the 'major' punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid

warders and convict warders are employed With this is bound up the question of a special class of well behaved prisoners which was tried from 1908 onwards in the Thana Jail

Juvenile Prisoners.—As regards "youthful offenders"—i.e. those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18, discharge after admonition delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit and whipping by way of school discipline

The question of the treatment of young adult prisoners has in recent years received much attention Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15 and therefore ineligible for admission to the reformatory school has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal and similar places progress has been made in this direction In 1905, a special class for selected juveniles and young adults was established at the Dharwar jail in Bombay in 1908 a special juvenile jail was opened at Alipore in Bengal in 1909 the Melkita jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and juvenile adult convicts was opened at Marilly in the United Provinces, and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines Other measures had previously been taken in some cases a special reformatory system for "juvenile adults" had for example, been in force in two central jails in the Punjab since the early years of the decade and Borstal enclosures had been established in some jails in Bengal But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1913.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report published in 1921, was summarised in the

Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court Sentences of imprisonment for less than twenty-eight days should be prohibited

The Indeterminate Sentence.—The sentence of every long term prisoner should be brought under revision as soon as the prisoner has served half the sentence in the case of the non-habitual and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case The revision should be carried out by a Reviewing Board, composed of the Inspector General of Prisons, the Sessions Judge and a non-official In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release

Transportation and the Andamans.—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jallie Commission report but it was not till 1926 that a definite decision was reached It was then decided that henceforth only those convicts should normally be sent to the Andamans who volunteered to commit that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land that in certain conditions they should be entitled to release to obtain occupancy rights over the land which they had cultivated and that the importation of wives and families should be encouraged The object of these changes was to promote the development of a free colony of persons, who would alter the terms of their sentences had expired make the Andamans their permanent home The effect up to date has been to introduce a completely new outlook on life into the settlement, but it is still too soon to appreciate its potentialities It has recently been found necessary to send to the Andamans certain convicts either sentenced to transportation for life or to long terms of rigorous imprisonment for permanent incarceration in the Cellular Jail Such prisoners will not be released and allowed to go into the settlement and its development will in no way be affected by their presence

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

Jail Population

451

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilize both Government and private agency for the control of settlements.

The variations of the jail population in British India during the five years ending 1930 are shown in the following table —

	1930	1929	1928	1927	1926
Jail population of all classes on 1st January	137 129	140 142	136 414	132 253	129,753
Admissions during the year	771 18	598 503	587 206	582 243	504,097
Aggregate	908 316	738 710	723 630	714 496	634,850
Discharged during the year from all causes	744 946	601 81	681 6 3	578 065	552,824
Jail population on 31st December	163 170	137 129	140 113	136 431	132,226
Convict population on 1st January	110 184	118 970	116 151	113 301	111 595
Admissions during the year	223 533	187 067	167 013	160 835	162,772
Aggregate	333 717	296 037	283 174	283 137	274,367
Released during the year	196 996	163 790	60 375	162 628	157 568
Transported beyond seas	1,500	1,821	506	1 3 1	783
Casualties, &c.	2,441	2 514	2 407	2,460	2,286
Convict population on 31st December	136 502	116 187	118 793	116 161	113,274

More than one half of the total number of convicts received in jails during 1930 came from the classes engaged in agriculture and cattle tending, about 154,000 out of 281,000 are returned as illiterate.

The percentage of previously convicted prisoners fell from 20 to 13, while the number of venial offenders rose from 339 to 757. The following table shows the nature and length of sentences of convicts admitted to jails in 1928 to 1930 —

Nature and Length of Sentence	1930	1929	1928
Not exceeding one month	35 773	29 838	20,776
Above one month and not exceeding six months	109 714	67 425	68,271
" six months " " one year	40 878	31 235	34 603
" one year " " five years	29 060	28,410	27,280
" five years " " ten "	3 935	4 502	3,754
Exceeding ten years	33	13	400
Transportation beyond seas—			
(a) for life	1 592	1 637	1 736
(b) for a term	37	1	42
Sentenced to death	1,126	1,175	1,108

The total daily average population for 1930 was 129 364 the total offences dealt with by criminal courts was 252 and by Superintendents 129 420. The corresponding figures for 1929 were 116,008 282 and 135 977 respectively.

The total number of corporal punishments showed a slight decrease, viz., from 221 to 220. The total number of cases in which penal diet (with and without cellular confinement) was prescribed was 5,293 as compared with 5,229 in the preceding year.

Total expenditure increased from Rs 1,85 16 674 to Rs 2 00 42,83 while total cash earnings increased from Rs 22,18 746 to Rs 29 56 224 there was consequently an increase of Rs. 8,04,431 in the net cost to Government.

The death rate decreased from 13 65 per mille in 1929 to 11 73 in 1930. The admissions to hospital were higher and the daily average number of sick rose from 21 26 to 23 88.

The Laws of 1932

BY

RATANLAL RANCHHODDAS, *Advocate, High Court,*

AND

MANHAR R VAKIL, *Barrister at-Law*

1 The Indian Companies (Supplementary Amendment) Act—The proviso to s 144 (1) of the Indian Companies Act 1913 as amended by the Indian Companies (Amendment) Act, 1930 lays down that a firm whereof the partners all hold auditor's certificates may be appointed by its firm name to be auditor of a company and may act in its firm name. As the proviso stands certain accountant firms doing business in India and having partners who do not visit India will in future be debarred from appointment as auditors of a company in India in their firm names unless each partner, whether resident in India or abroad is granted an Indian auditor's certificate. The present Act removes this defect by substituting the words whereof all the partners practising in India for the words whereof the partners all in sub-clause (a) of clause (a) of s 2 of the Indian Companies (Amendment) Act 1930.

2 The Employers and Workmen Disputes Repealing Act—The Employers and Workmen (Disputes) Act was passed in 1930 to provide for the speedy determination of disputes relating to wages in the case of certain workmen. The Royal Commission on Labour which invited opinions regarding the utility of this Act recommended its entire repeal. The present Act gives effect to that recommendation.

3 The Wheat Import Duty (Extending) Act—This Act extends the existing duties on wheat and wheat flour for a further period of one year viz up to the 31st March 1933. s 2 of the wheat (Import Duty) Act 1931 is repealed (s 3).

4 The Indian Finance (Supplementary and Extending Amendment) Act—The Act is intended to enable the assessments of income exceeding Rs 1,000 but not exceeding Rs 1,999 to be carried out expeditiously and economically. The Income-tax officer is authorised except where he has served a notice under sub s (2) of s 22 of the Indian Income-tax Act 1922, to make a summary assessment of the income of an assessee to the best of his judgment. He must thereafter serve on the assessee a notice of demand in a form to be prescribed by the Central Board of Revenue. An assessee in respect of whom such summary assessment has been made may within thirty days of receipt of the notice of demand, make an application to the Income-tax Officer for the cancellation or revision of the assessment. The Income-tax officer must after examining any accounts and documents and hearing any evidence which the assessee may produce and such other evidence as the Income-tax Officer may require determine by order in writing the amount of the tax, if any, payable by the assessee. Such determination will be held final. An application to the

Income-tax Officer for the cancellation or revision of the assessment will be deemed to be a return under sub-s (2) of s 22 of the Indian Income tax Act 1922 if an assessee files therewith a return of his income.

5 The Wire and Wire Nail Industry Protection Act 1932—The Act gives effect to the proposal made by the Tariff Board in their report on the grant of protection to the wire and wire nail industry. A temporary protective duty of Rs 45 per ton is imposed on iron or steel wire and wire nails. This duty remains in force until the 31st March 1934.

6 The Bamboo Paper Industry (Protection) Act—The Act gives effect to the recommendations of the Tariff Board regarding the grant of protection to the paper and paper pulp industries. The protective duties imposed on certain printing paper and writing paper by the Bamboo Paper Industry (Protection) Act 1925 and the Bamboo Paper Industry (Protection) Act 1927, are continued. A protective duty of Rs 45 a ton is imposed on imported wood pulp. These protective duties remain in force for a period of seven years.

7 Salt Additional Import Duty Extending Act—This Act extends the operation of the Salt (Additional Import Duty) Act, 1931 for a further period of one year.

8 The Bengal Criminal Law Amendment (Supplementary) Act—The Act re-enacts as 4, 5 and 6 of the Bengal (Criminal Law Amendment) (Supplementary) Act, 1925 to supplement the provisions against the commission of terrorist crimes in Bengal. Section 2 empowers the Local Government with the previous sanction of the Governor General in Council, to make an order committing to custody in a jail outside Bengal any person against whom an order under sub-s (1) of s 2 of the Bengal (Criminal Law Amendment) Act, 1930 is made, section 4 bars jurisdiction under the powers conferred by s 401 of the Criminal Procedure Code 1898 in respect of any person arrested, committed to or detained in custody under the Bengal Criminal Law Amendment Act 1930 or the present Act. The Act remains in force for a period not exceeding three years.

9 The Indian Partnership Act—Before the passing of the present Act the law relating to Partnership was contained in Chapter XI of the Indian Contract Act 1872 which is now repealed. Many important matters relating to partnership were left untouched in Chapter XI. In addition to these omissions the development of trade in India had shown further matters on which legislation was required. The present Act was therefore passed. It is the second of the series (the first being the Indian Sale of Goods Act, (1880) embodying a branch of the

law relating to Contract in a separate self contained enactment. It is mainly based on the English Partnership Act 1890.

Sec 1 to 3 are preliminary. The Act came into force on the 1st day of October 1932. Section 60 which comes into force on October 1, 1933, s. 1 (3). An act of a firm is defined as act or omission by all the partners or by any partner or agent of the firm which gives rise to a right enforceable by or against the firm (s. 2 (a)).

Sec. 4 to 8 deal with the nature of partnership. Sec. 4 defines partnership as the relation between persons who have agreed to share the profits of a business carried on by all or any of them acting for all. Under the Act the words a firm are used where persons who have entered into partnership with one another are referred to collectively. The relation of partnership arises from contract and not from status and therefore the members of a joint Hindu family carrying on a family business are not partners in such business (s. 5). Under s. 6 in determining the existence of partnership regard must be had to the real relation between the parties as shown by all relevant facts taken together and not merely to their expressed intention. Under s. 7 partnership it will be defined as a partnership where no provision is made by contract between the partners for the duration or the determination of their partnership. Particular partnership arises when a person becomes a partner with another person in particular adventures or undertakings (s. 8).

Sec 9 to 17 deal with the relations of partners to one another. A partner must indemnify the firm for any loss caused to it by his fraud in the conduct of the business of the firm (s. 10). The partners may determine their mutual rights and duties by contract either express or implied. Such a contract may be varied by consent of all the partners. Such a contract may also provide that a partner shall not carry on any business other than that of the firm while he is a partner (s. 11). Sec 12 and 13 deal respectively with the conduct of the business and the mutual rights and liabilities of the partners. Among other things the above sections provide that no change may be made in the nature of the business without the consent of all the partners that the partners must contribute equally to the losses sustained by the firm and that a partner must indemnify the firm for any loss caused to it by his wilful neglect in the conduct of the business of the firm. Under s. 14 the good will of the business is included among the property of the firm. Under s. 15 (b) if a partner carries on any business of the same nature as and competing with that of the firm he must account for and pay to the firm all profits made by him in the business. Sec 17 deals with the rights and liabilities of partners after the happenings of certain events i.e. (a) after a change in the constitution of the firm, (b) in the case of a firm constituted for a fixed term after the expiry of the term and (c) in the case of a firm constituted to carry out one or more undertakings where additional undertakings are carried out.

Sec 18 to 30 deal with relations of partners to third parties. A partner is the agent of the

firm for the purposes of the business of the firm (s. 18). He has an implied authority to do an act which is done to carry on in the usual way business of the kind carried on by the firm. There are certain limitations to the implied authority of a partner and it is capable of extension and restriction by contract between the partners (sec 19 and 20). Sec 21 enables a partner to bind the firm by any act done in an emergency for the protection of the firm from loss. An act or instrument done or executed by a partner in either a person on behalf of the firm if done or executed in the firm name binds the firm (s. 22). Under s. 23 an admission made in the ordinary course of business by a partner concerning the affairs of the firm is evidence against the firm. Notice to a partner who habitually acts in the business of the firm of any matter relating to the affairs of the firm operates as notice to the firm (s. 24). Under s. 25 every partner is jointly and severally liable for all acts of the firm which he is a partner in. Under s. 26 the firm is liable for the wrongful acts of a partner who by loss or injury is caused to any third party. Sec 27 deals with the liability of a firm for misapplication by partners of money or property received from a third party. Sec 28 introduces the doctrine of holding out. A person who represents himself to be a partner in a firm is liable as a partner in that firm to any one who has on the faith of such a representation given credit to the firm. The legal representative of the estate of a deceased partner is not liable for any act of the firm done after his death although the business is continued in the old firm name or in the deceased partner's name. Sec 29 deals with the rights of a transferee of a partner's interest. It entitles him only to receive the share of profits of the transferring partner but does not entitle him during the continuance of the firm to interfere in the conduct of the business or to require an account or to inspect the books. Under s. 30 a minor may be admitted to the benefits of partnership with the consent of all the partners. The minor is liable for the acts of the firm but the minor is not personally liable for any such act. The minor cannot sue for his share of the property or profits except when he wishes to sever his connection with the firm. On attaining majority the minor has the option of becoming a partner in the firm or of severing his connection with it.

Sec 31 to 36 deal with incoming and outgoing partners. The consent of all existing partners is required to the introduction of a new partner (s. 31). Sec 32 deals with the right of a partner to retire. It also considers the liability of the retired partner for acts of the firm and the liability of the firm for acts of the retired partner. Under s. 33 a partner may be expelled from a firm by a majority of the partners in the exercise of good faith of powers conferred by contract between the partners. The consent of the partner whose connection with the firm on the date of the order of adjunction (s. 34). An outgoing partner may carry on a business competing with that of the firm subject to certain restrictions. An outgoing partner may make an agreement with his partners that on ceasing to be a partner he will not carry on any business similar to that of the firm within a specified period or local limits.

(s 56) S 57 deals with the right of an outgoing partner, in certain case to share the profits of the firm made since he ceased to be a partner

Ss 39 to 56 deal with the dissolution of a firm and its legal consequences. The dissolution of the firm, in the complete breakdown of the relation of partnership between all the partners (s 39) A firm may be dissolved with the consent of all the partners or in accordance with a contract between the partners (s 40) A firm is also dissolved by the adjudication of all the partners as insolvent or by the happening of any event which makes it unlawful for the business of the firm to be carried on (s 41) A firm is dissolved by the death of a partner or by the adjudication of a partner as insolvent (s 42) A partnership at will may be dissolved by any partner giving notice in writing to all the other partners of his intention to dissolve the firm (s 43) S 44 gives the grounds on which a partner may sue for dissolution of the firm e.g. where a partner has become of unsound mind or where a partner wilfully or persistently commits breach of agreement or where a partner has transferred the whole of his interest in the firm to a third party Under s 45 the liability for acts of partners done after dissolution continues until public notice is given of the dissolution S 46 deals with the right of partners to a share of the net assets of the firm its dissolution S 47 deals with the continuing authority of partners for purposes of winding up the affairs of the firm S 48 sets out the rules to be observed in settling the accounts of a firm after dissolution S 49 deals with the payment of firm debts and of a partner's debts due from any partner Under s 50 a surviving partner may enter into transactions for personal profits undertaken during the winding up but he must account for the profits obtained S 51 provides for the return of premium to a partner who has paid it on entering into partnership for a fixed term on the premature dissolution of the firm S 52 deals with the rights of partner entitled to rescind a partnership contract for fraud or misrepresentation of any of the parties thereto S 53 empowers every partner to prevent any partner from using the firm name or property for his own benefit until the winding up is complete The goodwill of the business must be sold when the affairs of the firm are wound up, either along with the property or separately Notwithstanding the sale of the goodwill of a firm, any partner may carry on a business competing with that of the buyer, and may even advertise the business but he may not (a) use the firm name (b) represent himself as carrying on the business of the firm or (c) solicit old customers of the firm A partner may make an agreement with the buyer of the goodwill of a firm that he will not carry on any business similar to that of the firm within a specified period or local limits (s 55)

Ss 56 to 71 deal with the registration of firms S 56 empowers the Governor-General in Council to exempt any province from the provisions of these sections S 57 authorizes the local Government to appoint Registrars of Firms The registration of a firm may be effected by sending to the Registrar a statement accompanied by the prescribed fee containing certain particulars as to the firm e.g. names and addresses of the partners, the duration of their

partnership (s 58) The Registrar must record an entry of the statement in the Register of Firms and must file the statement (s 59) S 60 provides for the recording of alterations in the firm name and the principal place of business of the firm S 61 relates to noting in the Register of the closing and opening of branches and s 62 to noting of changes in the name and addresses of parties S 63 provides for the recording of changes in the constitution of a firm and the dissolution of a firm S 64 empowers the Registrar to correct mistakes, whether made by himself or by the persons sending his statements or notices S 65 provides for the amendment in the entry in the Register of firms by the order of a Court S 66 provides for the inspection by any person on payment of a fee the Register of firms and the document filed by the Registrar Under s 67 any person may obtain on payment of a fee a certified copy of an entry in the Register of Firms S 68 makes the documents recorded or noted in the Register of Firms conclusive evidence of the facts contained therein as against any person who has signed them It also makes certified copies of entries in the Register evidence of registration and of the contents of the documents S 69 deals with the effect of non registration A partner in a firm cannot sue the firm or an alleged partner to enforce a right arising from a contract or conferred by this Act unless the firm is registered and the person suing is shown in the Register of Firms An unregistered firm also cannot sue a third party to enforce a right arising from a contract Non registration of a firm or a partner does not affect any right to sue for the dissolution of a firm or for accounts of a dissolved firm or any right to realize the property of a dissolved firm or the powers of an Official Assignee Receiver or Court to realize the property of an insolvent partner Firms which have places of business outside British India can institute a suit without being registered S 70 imposes a penalty for making a false declaration in any document sent to the Registrar S 71 gives power to the Governor-General in Council and the Local Government to make rules to supplement the provisions relating to the registration of firms S 72 deals with the mode of giving a public notice under the Act S 73 among other enactments repeals the whole of Chap XI of the Indian Contract Act 1872

10 The Code of Civil Procedure (Amendment) Act.—Courts in British India are sometimes required to take evidence for foreign tribunals in civil and commercial matters There is no specific provision in the law of India prescribing the procedure to be followed in such matters The present Act by inserting new rules in Order XXVI of the First Schedule to the Code of Civil Procedure, 1908 lays down the procedure to be followed on such an occasion

11 The Public Solicitors Validation Act—Sections 81 and 92 of the Code of Civil Procedure 1908 empower the Advocate General to institute or to give consent to the institution of certain suits relating to public matters In order to provide for provinces where there is no Advocate General or for remote areas in the Presidencies s 93 of the Code provides that these powers of the Advocate General may be exercised with the previous sanction of the Local Government

by the Collector or by such officer as the Local Government may appoint in this behalf. Local Governments have taken the view that it was sufficient under this section for them to give previous sanction to the Collector or to the special officer generally and not in respect of each particular suit. Their Lordships of the Privy Council however have in a recent case held that the previous sanction of the Local Government must be recorded in respect of each particular suit. The result of this decision was that a large number of pending suits were subject to dismissal through no fault of plaintiffs. The present Act removes this hardship by validating all such pending suits and also provides for the retrial of all claims which may have been in the meantime dismissed whether in the Court of first instance or in the Court of Appeal on the ground of the absence of the requisite sanction.

12. The Foreign Relations Act.—It is a recognised principle of International Law that States in their relations with other States are responsible for acts committed by persons within their jurisdiction. In accordance with this principle most modern systems of law have made provision for the punishment of those against the heads of Foreign States. The present Act enables the Government of India to discharge this international responsibility. S 2 empowers the Governor General in Council to prosecute for offences of defamation committed against a Ruler of a State outside but adjoining India or against the consort or son or principal minister of such Ruler. S 3 empowers the Governor General in Council to forfeit or to detain in the course of transmission through the post certain publications containing matter which is defamatory of the persons aforesaid and which tend to prejudice the maintenance of friendly relations between His Majesty's Government and the Government of the State.

13. The Sugar Industry (Protection) Act.—This Act gives protection to the sugar industry in British India for a period of six years and provides for the determination of the extent of the protection to be conferred for a further period of eight years. A duty of 25 per cent *ad valorem* is imposed on molasses and a duty of Rs 7 4 0 per cwt on sugar and sugar candy, excluding confectionery. S 2 empowers the Governor General in Council to increase the above duties in certain circumstances.

14. The Indian Air Force Act.—This Act provides for the administration and discipline of the officers and men of the new Indian Air Force. Ss 1 to 6 are preliminary. The following persons are subject to this Act viz—
(a) Officers and Warrant officers of the Indian Air Force. (b) Persons enrolled under this Act. (c) Persons not otherwise subject to Military or air force law who are employed by, or are followers of the Indian Air Force. (s 2).

Warrant Officer means a person appointed gazetted, or in pay as a warrant officer in the Indian Air Force. **Airman** means any person subject to this Act other than an officer (s 6).

Ss 7 to 18 relate to the enrolment and discharge of airmen and to the powers of dismissal and reduction which may be used to secure efficiency, as distinct from the powers of dismissal and reduction by way of punishment exercised by Courts-martial. Under s 9 the enrolling officer must satisfy himself that the person signing the enrolment paper is of unimpaired Indian descent or if he is of mixed Indian and non Indian descent or is of unimpaired non Indian Asiatic descent is domiciled in India.

Ss 19 to 30 include provisions relating to penalties which may be imposed by way of discipline. Ss 19 to 24 relate to punishments which may be imposed by Courts-martial. S 25 relates to minor punishments which may be imposed by commanding and other officers without the intervention of a Court-martial. Ss 26 to 30 relate to penal deduction from pay and allowances.

Ss 31 to 38 deal with Air Force Offences and their punishments.

Ss 39 to 64 relate to arrest inquiries concerning absconders and the appointment duties and powers of a Provost Marshal. A Provost Marshal must be appointed by the Commanding Officer for the prompt and instant repression of irregularities and offences committed in the field or on the march (s 63).

Ss 65 to 92 relate to the constitution jurisdiction and powers of Courts-martial. Courts-martial are of three kinds namely (1) general courts-martial (2) district courts-martial and (3) field general courts-martial (s 65).

Ss 93 to 99 deal with the procedure of Courts-martial. Under s 90 every decision of the courts-martial must be passed by an absolute majority of votes. In the case of an equality of votes as to either finding or sentence the decision must be in favour of the accused. Sentence of death cannot be passed without the concurrence of two thirds at the least of the members of the court.

Ss 100 to 110 relate to confirmation revision, pardon and remission of sentences where under higher authorities are given powers to deal with findings and sentences of Courts-martial.

Ss 111 to 119 relate to the execution of sentence and the disposal of property regarding which any offence is committed.

Ss 120 to 128 include provisions of the nature of privileges, relating to both persons and property.

Under s 129 the Governor General in Council is empowered to make rules for the purpose of carrying into effect the provisions of this Act.

15. The Indian Tariff (Wireless Broadcasting) Amendment Act.—This Act was passed to provide funds to enable Government to continue wireless broadcasting in India by increasing the import duties leviable on wireless reception instruments and apparatus and component parts thereof to 50 per cent *ad valorem* without any surcharge.

16. The Indian Emigration (Amendment) Act.—The amendment of clause (b) of sub-s (2) of s 21 of the Indian Emigration Act 1923 authorizes the making of a rule to protect anyone

who does not hold a license to recruit from causing or assisting a person to emigrate (s 2). In several cases where there had been a clear breach of the Indian Migration Rules the prosecution failed owing to the absence of proof of inducement within the meaning of clause (b) of sub-s (2) of s 2 of the Indian Migration Act 1922. S 2 (c) of the present Act by substituting in the aforesaid clause for the word inducement which was narrowly interpreted by the courts the words cause or assist makes clear that no element of enticement need necessarily be present to constitute the offence.

S 3 (b) provides for the punishment of such breaches of the rules as are committed in the course of recruitment proceedings even when the breach is not actually committed by the licensed recruiter himself provided that the recruiter is privy to the breach.

17 The Cantonments (Amendment) Act—The Officer Commanding the District is exempted from assuming the duties of the Officer Commanding the station under the Cantonments Act 1924. S 2 of the present Act which came into operation on February 29 1932 exempts the Officer Commanding in Chief the Command from becoming the Officer Commanding the station for the purposes of the Cantonments Act 1924.

18 The Ancient Monuments Preservation (Amendment) Act—Under s 2 of the present Act the Local Government is empowered to make rules to restrict or regulate certain operations including quarrying excavating or blasting for the purpose of protecting or preserving an ancient monument. The Local Government may also make rules forbidding the carrying on of any of the aforesaid operations except in accordance with the rules and with the terms of a license. S 3 empowers the Governor General in Council after consulting the Local Government to declare any area to be a protected area and vests all rights in antiquities buried in such an area in Government. Any Officer of the Archaeological Department of any person holding a license may enter upon and make excavations in a protected area. The Governor General in Council is empowered to make rules to regulate archaeological excavation in protected areas and to regulate the division of all antiquities found between Government and the licensee. A further provision enables the Government to acquire a protected area which contains an ancient monument or antiquities of national interest and value.

19 The Trade Disputes (Amendment) Act—Before the passing of this Act s 13 of the Trade Disputes Act 1920 gave inadequate protection to those who served on or were connected with courts of Inquiry and Boards of Conciliation. The members of such tribunals were placed under the necessity of deciding in respect of every item of information obtained by them concerning any Trade Union or business whether such information was to be regarded as confidential or not. S 2 (a) of the present Act remedies this defect by making it the duty of the person desiring information to be kept confidential to prefer a request to this effect to the Court or Board. 2 (b) limits the operation

of s 13 of the Trade Disputes Act 1920 to wilful disclosures. S 2 (c) provides for the trial of offences under s 13 by a Criminal Court not inferior to that of a Presidency Magistrate or a magistrate of the first class. S 2 (e) makes the sanction of the authority appointing a court or a Board a condition precedent to the institution of a suit or prosecution under s 13.

20 The Port Haj Committee Act—The Haj Inquiry Committee which was appointed by the Government of India in March 1929 to inquire into the arrangements in force for pilgrims proceeding to the Hajj from India proposed that the Port Haj Committee existing at the ports of Bombay Karachi and Calcutta should cease to be merely advisory and consultative bodies and should be entrusted by law with administration of all work connected with the pilgrim traffic at the ports. The present Act gives effect to the proposal with certain modifications. S 1 (2) extends the Act in the first instance to the Presidency of Bombay and Bengal only. The Governor General in Council may extend the Act to any other maritime province. S 4 gives the composition of the Port Haj Committee of the ports of Bombay Karachi and Calcutta. S 5 gives power to the Government to alter the composition of these committees. Ss 7 8 9 and 10 relate to the nomination election co-option term of office formation of new committees eligibility of candidates election disputes rank or filling casual vacancies and like matters. Ss 11 12 and 13 relate to the chairman and vice-chairman of Port Haj Committee. Ss 14 15 and 16 concern to the officers and servants of the committees. S 17 relates to the meetings of committees and the conduct of their business. S 18 enumerates the duties of the committees. S 19 provides for the inspection of pilgrim ships. S 20 places at the disposal of the committees all sources of income which are in any way connected with pilgrims to the Hajj. S 21 limits the application of the income to expenses incurred in the discharge of the duties of the committees and to any other object which the Local Government may prescribe by rule.

21 The Code of Criminal Procedure (Amendment) Act—Section 2 (a) and (b) of the present Act by amending s 326 sub-s (5) and (64) of the Criminal Procedure Code 1898 provides for the payment of compensation to a person opposing an application for transfer which turns out to be either frivolous or vexatious. The amount of compensation must not exceed Rs 250. S (2) (c) provides for the adjournment of a case if a party notifies his intention to move for a transfer at any stage before the defence closes its case. The Court will not be bound to adjourn the case upon a second or subsequent intimation from the same party or where an adjournment has already been obtained by one of several accused upon a subsequent intimation by any other accused. The inherent power of the Court under s 344 of the Criminal Procedure Code 1898 to adjourn a case is not affected by the above provisions.

22 The Tea District Emigrant Labour Act—The Assam Labour and Emigration Act 1901 which regulated emigration to the tea

districts of Assam was designed like its predecessors mainly to regulate the recruitment and engagement of indentured labour. Attempts were made by amending Acts in 1909, 1915 and 1927 to adapt the Act to meet altering conditions. These changes however having proved inadequate the Royal Commission on Labour recommended the replacement of the existing legislation by a new enactment. The present Act embodies the scheme prepared by the Commission, with certain minor modifications.

Ss 1 to 6 are preliminary. Recruiting province is defined as any province other than Assam [s. 2 (c)]. Assisted emigrant means an adult who has left his home in any recruiting province and is proceeding to any place in Assam to work as a labourer on a tea estate and received assistance from any person [s. 2 (f)]. An emigrant labourer is defined as a person who has last entered Assam as an assisted emigrant and is employed on a tea estate [s. 2 (h)]. For the general administration of the system which this Act establishes the Governor General in Council is empowered to appoint a Controller of Emigrant Labour and one or more Deputy Controllers of Emigrant Labour (s. 3).

Ss 7 to 16 deal with repatriation. Under s. 7 every emigrant labourer on the expiry of three years from the date of his entry into Assam will have the right of repatriation as against his employer. It will also be possible to claim repatriation within three years in the event of the emigrant (1) being dismissed otherwise than for wilful and serious misconduct (s. 8) (2) falling ill (s. 9) (3) not being provided with suitable work or (4) having his wages unjustly withheld (s. 10) (4) a b c d. Repatriation within one year of entry into Assam will also be possible where there has been serious undue influence fraud or other misrepresentation or other irregularities in recruiting (s. 10 (2) a b). Under s. 11 repatriation can be ordered at any time by a Criminal Court in the case of a labourer who has been assaulted by the employer or his agent.

Ss 16 to 25 enable the Local Government subject to the control of the Government of India to impose control over the forwarding of assisted emigrants. Assisted emigrants will ordinarily be forwarded through licensed local agents in the recruiting districts (ss. 17 and 18) by prescribed routes (s. 19) on which provision for food shelter etc. must be made by employers and medical supervision can be exercised. Only employers who make satisfactory provision will be able to recruit, and retain licenses for local agents (s. 17 (9)) and the operations of local agents and others engaged in forwarding will be subject to inspection and scrutiny (s. 22).

Ss 26 to 31 enable the Local Government subject to the control of the Government of India, to impose control over the recruitment of assisted emigrants. Employers will be prevented from recruiting otherwise than by means of certified persons employed in the gardens (garden sardars) or recruitment agencies in the recruiting provinces (ss. 27 and 28).

S. 32 prohibits the recruitment of children unless they are accompanied by their parent or guardian. It also prohibits the recruitment of a married woman who is living with her

husband unless she is proceeding with the consent of her husband. S. 33 empowers the Controller to detain and return to the employer a person sick or some migrating from any province. The provisions of this Act are intended to apply only to emigration for work on tea plantations in the first instance but under s. 38 power is retained to extend its application to lands and premises in Assam other than tea estates. The Assam Labour and Migration Act 1912 and the amending Acts of 1908, 1915, and 1927 are repealed.

23 The Criminal Law Amendment Act—The (Civil Disobedience) movement made it necessary to supplement the criminal law by means of certain Ordinances promulgated by the Governor General in exercise of his powers under s. 72 of the Government of India Act. The Special Powers Ordinance which combined powers taken by the earlier Ordinances (issued on December 21, 1932). The present Act which remains in force for three years reproduces in the form of an Ordinance to Acts already on the Statute book certain provisions of the Special Powers Ordinance 1932.

24 The Bengal Suppression of Terrorist Outrages (Supplementary) Act—The Bengal Suppression of Terrorist Outrage Act 1932 passed by the Legislative Council of the Government of Bengal, has provided for appeals to the Court of Session against sentences of transportation not exceeding three years and of imprisonment not exceeding four years when passed by a Magistrate. S. 3 of the present Act provides for appeals to the High Court of Judicature in Calcutta in all cases in the Presidency towns of Calcutta and for appeals in the mofussil from any sentence of transportation for a term exceeding two years or of imprisonment for a term exceeding four years. S. 10 of the Bengal Suppression of Terrorist Outrages Act 1932 (far of jurisdiction in certain matters) cannot affect the jurisdiction of the High Court. S. 4 of the present Act extends the bar of jurisdiction to the High Court also. S. 6 extends jurisdiction to courts including the High Court with proceedings under the Bengal Suppression of Terrorist Outrages Act 1932.

25 The Indian Tariff (Ottawa Trade Agreement) Amendment Act—The present Act amends the Indian Tariff Act 1894 in pursuance of the Trade Agreement made at Ottawa on August 20, 1932 and the Supplementary Agreement relating to Iron and Steel made on September 22, 1932. In the Government of India and His Majesty's Government in the United Kingdom. Under s. 2 of the present Act the duty to be levied and collected on any article chargeable under Parts VIII or IX of the Second Schedule to the Indian Tariff Act 1894 (added by s. 4) will be at the standard rate specified for it unless a preferential rate is specified for such article if it is the product or manufacture of the United Kingdom or of a British Colony. Part VIII enumerates articles which are liable to duty at 30 per cent, ad valorem or to preferential duty at 20 per cent. Part IX enumerates articles which are liable to duty at special rates or to preferential duty at lower rates.

India and the League of Nations.

India is a Founder Member of the League of Nations and enjoys in it equal rights with other Member States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conferences held in London in 1921, 1923 and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be autonomous communities, equal in status, in no way subordinate to one another in any respect or their domestic or external affairs though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations. India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919 but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold in all essential respects the same position in relation to the administration of public affairs in India as is held by His Majesty the King Emperor in Great Britain. And there are certain other respects in which India's Constitutional position in the Empire is not the same as that of the Self-Governing Dominions. India for example is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when as one of the States of the Empire she joined in the Paris Peace Negotiations in 1918. India's membership of the League of Nations places her in a unique position among all non-self-governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article I of the Covenant by which the League was established and which states that any fully self-governing State, Dominion or Colony not named in the Annexes may become a member of the League. She is the only original member which is not self-governing, and in virtue of the restriction under para 11 of article I on the admission of members other than original members she will so long as the present constitution of the League endures, remain the only member which is not self-governing.

India's Attitude,

On questions coming before the League, India has exactly the same rights as any other Member-State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction but in practice, he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917 recommending *inter alia* recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the International Labour Organisation she has been successful in bringing Empire policy into line with her own on more than one occasion. In many of those conferences particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Commonwealth. One interesting case occurred in 1920 at the Geneva Maritime Conference when India delegates in the face of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonise with her constitutional position as defined in the Government of India Act. Nevertheless, as the Secretary of State in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929 showed, it has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits. It was not legally possible for the Secretary of State to relinquish his constitutional power of control, nor consistently with responsibility to Parliament could he delegate it. But it has been his constant endeavour to restrict its exercise to a minimum, to keep even its existence as far as possible in the background and to allow to the Indian Government the greatest possible freedom of action under the influence of their Legislature and of public opinion.

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits even though, as has occurred in some instances, it brings her into conflict with His Majesty's Government. In 1925 for example at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M. S. Government which resulted in India settling the question of Indian hemp to her own liking. In the event of such conflict within those limits, the Secretary of State acts if he acts at all as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates but rather with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain. India has participated in all the Assemblies of the League, in the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-League International Conferences, including the Washington Conference on Naval Armaments in 1921, in Genoa Economic Conference in 1922 and the International Naval Conference held in London in 1930. India is also represented on several permanent League bodies e.g. the governing body of the International Labour Office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. It is interesting to note that since 1921 Sir Atul Chatterjee has been acting as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932.

The Personnel of the Indian Delegation has from the outset largely been Indian in race, though owing to the constitutional organisation of the Indian administration it has frequently been necessary for her to be represented by Englishmen. This has especially been the case when specialized experts were required. The Indian character of the personnel has as rapidly as possible been increased and in 1929 the Indian Delegation to the annual Assembly of the League was for the first time led by an Indian (The Hon. Sir Mohammed Habibullah Member for Education, Health and Lands in the Executive Council of His Excellency the Viceroy and Governor-General). In the following year the delegation was led by the Maharaja of Bikaner. While the delegations to the Inter-

national Labour Conference are becoming almost entirely Indian in personnel, the workers' delegations always have been Indian. This is merely an expression of the general policy of the Secretary of State that an increasing number of Indians should be given the opportunity of being trained in the international field. An example of the increasing part being played by Indians in League work occurred in 1930 when during the Assembly of that year and at the instance of Sir Jehangir Coyaji a member of the Indian delegation an important resolution was passed in reference to the need for an inquiry into world depression. The Indian Delegation to the League Assembly in 1932 consisted of H. H. the Aga Khan (Leader), Sir Pra. Bhasaniwar Pattani (President of Bhavnagar State Council), Sir Dunsy Jiraj (Member of the Council of India) Members and Sir Jehangir Coyaji (Head of the Department of History Economics and Politics Andhra University).

The Secretary of State in his Memorandum to the Parliamentary Statutory Commission wrote — India's membership of the League has had the effect of stimulating her national self-consciousness and has laid the foundations of an informed public interest in international affairs. India's representatives have not confined themselves merely to the role of spectators but have played a prominent part in many of the meetings which they have attended. She has fully justified her position as a separate Member of the League by her co-operation in the economic and social spheres which form so large a part of its activities. But in certain questions where special Indian interests are involved the Indian Delegation can and does take an independent line and may even find itself in opposition to other parts of the Empire. But sometimes on non-political questions the British and Indian Delegations have remained in opposite camps. On such questions when special Indian interests are at stake India's right of independent action extends to speaking and voting against the views advanced on behalf of His Majesty's Government. Lord Reading in a note at the end of his Viceroyalty stated his conclusion that the system of consultation between the Secretary of State and the Government of India had worked satisfactorily and that the Government of India without any definition of its problematical rights, already in practice obtained all the advantages which it might claim.

The year 1932 saw the opening of a League of Nations Bureau in Bombay in response to the demands of successive delegations to Geneva. Its purpose is to keep in touch with representative Indian opinion so that Geneva and India may be brought closer together.

Labour in India.

During the years preceding the appointment of the Royal Commission on Indian Labour in 1920 very little authentic information was available regarding Labour in India and the sections dealing with this question in *The Indian Year Book* were more or less confined to a description of the main Acts in Labour Legislation in India and to such information as could be gleaned from the official reports of the administration of these Acts and from the Reports published of Enquiries conducted by the Labour Office of the Government of Bombay. With the appointment of a Royal Commission on Labour in India all Provincial Governments and Railways and many of the larger labour employing organisations and Associations of such organisations made enquiries into labour conditions in their respective territories and jurisdictions, and compiled fairly comprehensive

Memoranda for submission to the Royal Commission. Many of these Memoranda have been published and contain a fund of the most valuable information possible. No use could of course be made of such information as the Governments and others submitting these Memoranda desired to keep confidential. But where descriptions were given of existing conditions which must be known to large bodies of persons in the respective localities concerned and which could easily be obtained by any person enquiring, every endeavour has been made to make this section as complete as possible by the presentation of essential facts. The Editors of *The Indian Year Book* gratefully acknowledge the sources which have been made use of in the compilation of this note.

GROWTH OF THE LABOUR PROBLEM

India is and has always been a pre-eminently and predominantly agricultural country and over 70 per cent of her people are dependent on the soil for their livelihood. Except in a comparatively few cases there is no settled and permanent labour force in most industrial centres in India. The vast majority of industries draw the labour they require from the village—labour which seldom breaks the contact with village life and periodically returns to renew its associations with it. This fact cannot be too strongly emphasised. If it is lost sight of it would be most difficult to understand how large bodies of comparatively low paid men and women can afford to participate in strikes involving complete stoppage of work and loss in wages for periods of half a year. Such strikes would be impossible if Indian industrial labour did not have agriculture to fall back upon as a subsidiary occupation during periods of prolonged industrial disputes. The figures for the 1931 Census show that the number of persons of gainfully occupied in the whole of India amounts to 184 millions or 83.8 per cent of the total population. Of this number 68 per cent are men and 32 per cent women. The proportion of the working population *i.e.* earners and working dependents engaged in agriculture is over 108 millions or 66.4 per cent.

The emergence of Indian industrial labour as such may be considered to be associated with the year 1880. Its growth and development since that date may be divided, for purposes of broad generalisation, into four periods: (1) from 1880 to 1915, (2) from 1916 to 1921, (3) from 1922 to 1927, and (4) from 1928 to the present day. The first period marks the growth of factory development with a slow but steady decline in cottage industries. The total number of cotton mills in India rose from 68 to 264 and the number of persons employed from 40,000 to 260,000. The total number of jute mills rose from 23 to 66 and the number of persons employed from 27,000 to 216,000. There was a vast expansion in railways and many new industries were established. Labour was immobile, earnings in agricultural pursuits were extremely low, commodities were comparatively cheap, and industrialists were able to get

all the labour they wanted by tapping the adjacent villages at any rates of wages they liked to offer so long as they were higher than those which could be earned by work in the fields. Both the men and the women employed were considered to be a part of the plant of the factory; child labour was exploited, and little thought was given to the human element behind the worker. Hours of work were excessive, no amenities were provided because the only thing that the worker was expected to do was to work, eat and sleep. The provision of housing was a necessary evil which had to be provided where factories were situated away from towns. The factories Act was modelled more on the lines of providing against loss of life due to accident rather than from the grinding work which a factory worker was expected to do. The humanitarian employer was considered to be a pest who would ruin industry and all that industrialists thought of was the greatest return which could be obtained from the capital invested.

The second period emerged soon after the outbreak of the great war. Large contingents of Indian troops were sent overseas, and had to be supplied with adequate clothing and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and materials to the various seats of war. Heavy demands were made by the belligerent countries for raw products. India secured the opportunity for which she had been looking for generations. Her credit expanded, her industries thrived and the returns on capital invested in every branch of trade and industry became phenomenal. Prices soared high. Owing to the influx of large bodies of persons to the towns, housing became hopelessly inadequate and rents rose to such an extent as to call for legislative restrictions. But nobody thought of those who were mainly responsible for the creation of the added wealth of India. Labour was still considered to be that inarticulate part of the plant of the factory which it had always been. The end of the War brought visions of an Utopia. Big commercial and industrial enterprises were floated. Agriculturists were securing high prices for their produce. Labour was in great

demand not only in agriculture but also in commerce and industry. The successes which labour met with during the war in demands for increases in rates of wages impelled them to demand further increases with each increase in the cost of living. Where demands were not granted strikes were threatened. The influenza epidemic of 1918 which swept away large masses of the population of the country created a big gap in the available supply of labour and since then all the strikes of the period for increases in wages were successful owing partly to the necessity for speeding up production and partly to the shortage in the available supply of labour.

The gradual demobilisation of the Armies of the War and the closing up of the various Munitions Works disbanded millions of men and women who rapidly spent the savings secured during the War. The pre-war industries in the belligerent countries could not be reorganised at once. The spectre of unemployment loomed large. Credit fell. With the fall in credit the demand for manufactured articles declined and prices began to show a marked downward tendency. The year 1922 may be considered as the beginning of this period of reaction and depression and the beginning of the third period in the history of Indian industrial labour. Labour all over the world demanded an improvement in the conditions of life and work. The creation of an International Organisation to deal with all questions connected with labour from an international point of view and the commitment of India as one of the signatories to the Treaty of Versailles, to the ratification and acceptance as far as possible of the Conventions and Recommendations adopted by the International Labour Conference have made it obligatory for her to fall into line with the other industrial countries of the world in ameliorating labour conditions. The beginning of this period therefore saw a radical revision of the existing Factory Law by an Amending Act passed early in 1922. The existing Indian Mines Act was replaced by another Act of 1923 during which year a Workmen's Compensation Act was also passed for the first time. A Trade Union Act was passed in 1920.

The depression in trade and industry which set in in 1922 has continued ever since. Various attempts have been made by all classes of industrialists to reduce the wages of labour in order to reduce costs of production. Co-ordinated action taken by the Ahmedabad Mill owners Association to reduce the wages of operatives in the Ahmedabad cotton mills by 20 per cent with effect from the 1st April 1923 was successful to the extent of an eventual cut of 15.625 per cent being agreed to after a general strike lasting more than two months. A similar attempt made by the Bombay Mill owners Association in 1925 to reduce wages by 11½ per cent was, however, frustrated by a strike lasting for nearly three months which was eventually settled in favour of the workers by a maintenance of the existing rates on the removal of the Excise Duty of 8½ per cent on cotton manufactures in India by a Special Ordinance issued by the Governor-General in Council. Similar attempts made in individual concerns in the Districts succeeded mainly for want of effective combination among the workers. No other organised attempts were

made to effect reductions in wages. There were several reasons for this. The most important of these was that after the period of the decline in prices had set in after 1920 real wages in comparison with the standard of life of the year 1914 began to improve and labour was deterred not to let go the advantage gained in the struggles immediately following the end of the War. This period was one in which a considerable number of Acts in connection with labour were placed on the Statute Book. In addition to these the Government of India had asked Provincial Governments to consider proposals for legislating with a view to prompt payment of wages. The inquiries held in 1926-27 into the question of Deductions from Wages or Payments in respect of fines indicated legislation on the lines of the Truck Acts. It was becoming obvious to the Industrial Employer that Government were most anxious to do all they could to improve labour conditions in India. The employers as a whole, therefore, did not desire to precipitate matters by insisting on reductions in wages. It was imperative, however, that something should be done, and done quickly to reduce costs of production. The only way to do this without reducing wages was in the view of the employers to ask the workers to do more work during the existing hours of employment so as to enable the employer to dispense with a number of workers and thus to reduce his wages bill.

The fourth period beginning with the year 1925, therefore saw the advent of *Radicalism* seen or more efficient methods of working. Employers particularly those in Bombay city, proposed to ask workers to mind more machines in return for a compensatory increase in wages. Some advanced firms controlling cotton mill agencies actually introduced various efficiency measures in their mills. The introduction of these measures necessitated reductions in the numbers employed. The beginning of this period coincided with the entry of the Communists into the Trade Union movement in India.

When the so-called Labour Group of the Indian National Congress failed to obtain acceptance of their ideas by the Congress they formed in January 1927 a *Workers and Peasants Party* one of whose objects was to promote the organisation of trade unions and to wrest them from their alien control. Communist emissaries were sent out to India by the Third International to further war against imperialism the destruction of capital and the creed of revolution. The Workers and Peasants Party started a paper called the *Krant* (Revolution) in May 1927 which however had to cease publication at the end of the year owing to financial difficulties. The members of the Party took an active part in the strike of the operatives in the cotton mills in the Sassoon group early in 1928 but their attempts to bring about a general strike in the cotton mills in Bombay failed owing to the opposition of the Bombay Textile Labour Union which had been formed by Mr. N. M. Joshi in January, 1928. When another great group of mills in Bombay under the agency of Messrs. Currimbhoy Ebrahim and Sons sought to introduce efficient methods of work, the Communists saw their opportunity. All the operatives of the Currimbhoy group were brought out on the

19th April 1928 and the Communists with the help of the turbulent elements in the industry brought about a complete stoppage of work by picketing, intimidation and stone throwing in all other mills in Bombay (except two mills at Colaba) by the 26th April. Owing to internal dissensions in another Union of cotton mill workers called the Gini Kamgar Mahamandal they secured the support of Mr A. A. Alwe its President, and formed a new Union called the Bombay Gani Kamgar Union on the executive of which several prominent Communists were appointed. The Communists revived the publication of their paper the *Kranti* and they were successful, by holding almost daily meetings at which revolutionary speeches were delivered and by the publication of hand bills in capturing the imagination of the workers and keeping the strike going for a period of nearly six months. They also took an active part in the prolonged strikes of the same year in the Tata Iron and Steel Works at Jamshedpur and in the workshops of the Bengal Nagpur Railway at Kharagpur. They actively associated themselves with the strike on the South Indian Railway and they secured an entry into several Unions connected with Municipalities, Port Trusts and other Public Utility Services. After the calling off of the General Strike in the Bombay Mills on the 8th October 1928, they endeavoured to paralyse the cotton mill industry in Bombay by calling several lightning strikes in individual mills on the flimsiest of pretexts, even though the terms of the settlement of that strike required that all disputes between the employers and employees on the interpretation of the terms of agreement should be referred to the Bombay Strike Enquiry Committee which had been appointed by the Government of Bombay to express opinions on the matters in contention.

Bombay has seen few riots and disturbances of the type which broke out in the City on the 2nd February 1929 and which resulted in the death of 149 persons and the destruction of property. The *Strike Enquiry Committee* appointed by the Government of Bombay found that the origin of the riots was the series of inflammatory speeches delivered by certain leaders of the Gini Kamgar Union during the General Mill Strike of 1928 and again during the Bombay Oil Strike which lasted from the 7th December 1928 till after the date of the riots.

In 1929 the Gini Kamgar Union succeeded in calling another General Strike in the Bombay Mills on questions connected with dismissals which they interpreted as a direct attack by the Millowners to undermine the Union. The strike although not so complete in character as the strike of 1928, nevertheless lasted from 26th April to 18th September, 1929, and was called off only when the Court of Enquiry appointed by the Government of Bombay under the Trade Disputes Act had reported in unequivocal terms that the whole blame for this strike lay with the Bombay Gini Kamgar Union. But the Communist group was able to capture the Indian Trade Union Congress at the 11th Session held in Nagpur and to force the moderate elements consisting of Messrs. Diwan

Chaman Lal, N. M. Joshi, B. Shiva Rao, V. V. Giri, R. R. Bakshi, etc. to secede from the Congress on that body passing resolutions boycotting the Royal Commission on Labour in India and the International Labour Conference by appointing the Workers Welfare League, a Communist organisation in England as their Agents for Great Britain, and the declaration of Independence and the establishment of a Socialist Republican Government of the Working Classes in India.

It is of importance to lay stress on the problems connected with the Communist menace in India. The object of the Communists is not so much the welfare of labour as the spread of revolution. Their ultimate aim is the destruction of capital and the replacement of the established Government by a dictatorship of the proletariat. The manner in which they can achieve this is by penetrating trade unions by calling strikes in industries by unduly prolonging them by putting up strings of preposterous and absurd demands, by refusing conciliation or arbitration and by sending masses of workers seething with discontent into the districts to preach their gospels of class hatred and class war to the ignorant masses in the villages of India. Fortunately for industry, thirty of the more prominent and avowed Communists all over India were arrested in March 1929 under Section 121 A of the Indian Penal Code for organised conspiracy, under the direction of the Communist International and other Associated bodies to deprive the King of the Sovereignty of British India. The trial of those 30 persons in what is now historically known as the famous Meerut Conspiracy case lasted from 1929 to 1932 when some of the prisoners were released on bail pending final judgment. Judgment in the case was delivered at Meerut by Mr. Justice the Session Judge on the 16th January 1933. One of the thirty accused died in prison three were acquitted and the remaining 26 were sentenced to terms of imprisonment varying from transportation for life to three years. Musaffar Ahmad was transported for life, Dange, Ghate, Spratt, Jogikar and Nimkar were sentenced to transportation for 12 years, Badli Mirajkar and Usmani to transportation for 10 years, Sohanlal Joshi, Abdul Majid and Goswami to transportation for seven years, and Ayudhya Prasad, Adhikari, P. C. Joshi and Daxal to transportation for five years. Chakravarti, Basak, Hutchinson, Mitta, Shahwalia and Saigal were sentenced to rigorous imprisonment for five years, and Shangal, Rude, Alvi, Kase, Gowrahankar and Kadam to rigorous imprisonment for three years. Ghose, Mukherjee and Banerjee were acquitted. Some of the prisoners who were released on bail made frantic efforts to regain their hold on Labour Unions. The good sense of the workers prevailed in most cases, but the Communists have again succeeded in getting into some of the more important Unions. Notably the Railway Unions and they are again endeavouring to capture the workers in the Textile Industry in Bombay. In the absence of strong leadership there are however several factories in their camps and different groups are working in the same industry.

ROYAL COMMISSION ON INDIAN LABOUR

The British Government, in consultation with the Government of India appointed on 24th May, 1929 a Royal Commission to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India on health, efficiency and standard of living of workers and on relations between employers and employed and to make recommendations. The Royal Commission consisted of the Right Honourable Mr J H Whitley as Chairman with the Rt Hon Mr Srinivasa Sastry P C Sir Alexander Murray, Kt, CBE, Sir Ibrahim Rahimtoolah Kt KCSI, CBE, Sir Victor Sassoon, Bart, Dewan Chaman Lal M LA Miss Deryl M Le Power Deputy Chief Inspector, Trade Boards, England, and Messrs R M Joshi M LA G Clow CBE FCS, G D Birla M LA Kabeer ud-din Ahmed M LA and John Cliff Assistant General Secretary Transport and Railway Workers Union, England as members and with Messrs S Lall ICS and A Diddin from the India Office, London as Joint Secretaries. Mr J H Green, MBE was Assistant Secretary Lt Col A J H Russell, CBE, LMS, was subsequently appointed as a Medical Assessor and Mr S K Deshpande, B Litt. (Oxon), Senior Investigator of the Labour Office, Government of Bombay was appointed as a Statistician to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments the Railways and Associations of Employers and Employed left for England on the 22nd March 1930. The Commission returned on the 11th October 1930 and after touring Ceylon and Burma went to Delhi in November.

The Report of the Commission was published in June 1931 and is a document of first rate importance which will be the text-book of social legislation and labour welfare for many years to come. Moreover the value of its recommendations is enhanced by the fact that they are practically unanimous and represent the considered opinion of employers, workers, legislators and officials all of whom were represented on the Commission. Every aspect of the labour problem in India has been considered and discussed and the recommendations number many hundreds and cover a very wide field.

A summary containing the principal recommendations of the Royal Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. The Government of India in the Department of Industries and Labour classified these recommendations under six different groups according as they involved or required: (1) Central legislation, (2) Administrative action by the Government of India, (3) Provincial legislation, (4) Administrative action by local Government and Administrations, (5) Action by public bodies e.g. Municipalities, Universities etc. and (6) Action by employers and their organisations or by Workers, Unions and the recommendations so grouped were forwarded by the Government of India

to all Local Governments and Administrations under cover of a circular letter dated the 30th September 1931 with a request that Provincial Governments should give careful consideration and examination to those recommendations in connection with which they were required to initiate provincial legislation or to take administrative action, and to bring such recommendations as fell within the last two groups to the attention of the public bodies and the organisations of the employers and the employed concerned. The Government of India published about the end of the year 1932 a first Report showing the action taken by the Provincial Governments up to the 1st July 1932 and by the Central Government up to the 30th September 1932 on the recommendations made by the Commission. Owing mainly to financial stringency no Provincial Governments have so far accepted any local legislation implementing the Commission's recommendations but the Government of India have not only passed three Acts—(1) Act 11 of 1932 repealing the *Employers and Disputes Act 1890*, (2) The *Trade Disputes (Migrant Labour) Act 1932* which replaced the *Assam Labour and Emigration Act, 1901* as amended by the *Amending Acts of 1908, 1915 and 1927*, and which comes into force on the 1st April 1933, and (3) the *Trade Disputes Amendment Act 1932* but they have also drawn up four other Bills for (1) amending and consolidating the *Indian Factories Act*, (2) amending the *Workmen's Compensation Act 1923*, (3) amending the *Land Acquisition Act 1894* and (4) making the Pledging of the Labour of Children illegal. The Government of India have also submitted proposals to Local Governments and Administrations for initiating new legislation in connection with the following matters—

- (1) The amendment of the *Indian Mines Act* for a reduction in the weekly and daily limits of hours of work, and for certain other matters.
- (2) *Employees Liability (Re "Common Employment" and "Assumed Risk")*.
- (3) *Extension of Workmen's Compensation to Agriculture and Forestry*.
- (4) *Making illegal the Besetting of an Industrial Establishment for the recovery of debt*.
- (5) *Fixation of Hours of Work of Dock Labourers*.
- (6) *Allotment of Seamen's Wages and Exemption of Salaries and Wages from Attachment*.

The Royal Commission made several recommendations for the control of those factories which do not use power and which are at present not regulated. The Government of India are at present engaged in formulating proposals for a new and a separate Act for the regulation of such factories. Proposals for the drafting of a Bill on the lines of the *British Truck Acts* for the control of fines and deductions from wages were under departmental examination by the Government of India when this note was compiled. Other matters are to be shortly taken up for more detailed knowledge of the

action taken administratively by the Provincial Governments, Public Bodies and Employers and Workers Organisations the reader is referred to the recent report published by the Government of India as it is obviously impossible to give a recital of such matters in a compact book of reference such as the *Indian Year Book*, but as it might be of considerable interest to the users of the *Indian Year Book* to have a summary of the legislative proposals at present under consideration readily available, we propose to substitute in place of the summary referred to above summaries of the more important changes already effected or proposed to be made in the near future. Other important recommendations made by the Royal Commission have also been included in the various chapters into which this note is divided, the changes proposed in connexion with the Workmen's Compensation Act 1923, the Indian Factories Act 1911 the Indian Mines Act 1923, the Indian Trade Disputes Act 1929 and Recruitment for Assam will be dealt with under the various headings into which this chapter is divided. Summaries of the proposals for new legislation are given below—

New Labour Legislation Proposed.

Proposal to make Beetting an Industrial Establishment for the purpose of collecting debts a criminal and cognisable offence.—

One of the several recommendations of the Royal Commission is that the beetting of an industrial establishment for the purpose of collecting debts should be made a criminal and cognisable offence. In this connexion the Government of India have invited the views of all Local Governments and Administrations in the Department of Industries and Labour Circular letter, dated the 27th August 1932. The Government of India point out that the proposal aims at preventing two practices associated with the recovery of debts from industrial workers. One of these is the system whereby money lenders are permitted by some employers to enter the factory and to collect their dues before the workman receives his pay. The other practice is for the money lender to wait outside the factory gate and to secure payment before the workman can part with any portion of his wages. The objection to both these practices is that they tend to make the payment of interest and the repayment of debts the first charge on wages. When the dues are collected within the factory the workman has as a rule, no means of resisting the deduction and when the dues are collected at the gate an element of intimidation not infrequently enters into the transaction. The Government of India recognise that the Commission's proposal does not go far enough as it relates only to action in or near an industrial establishment but it appears to them to offer the possibility of stamping out the practice of recovering private debts at the pay desk and of checking at least the power of the money lender to make his demands a first charge on industrial wages. As such the Government of India are despatched provisionally to support the proposal. Replies from the Local Governments were asked to be submitted by the 1st January 1933

and the matter is under the further consideration of the Government of India.

The Prohibition of the Pledging of the Labour of Children.—The Royal Commission found evidence in such widely separated areas as Amritsar, Ahmedabad and Madras of the practice of pledging child labour that is the taking of advances by parents or guardians on agreements written or oral, pledging the labour of their children. In some cases the children so pledged were subjected to particularly unsatisfactory working conditions. The Commission considered that the state would be justified in adopting strong measures to eradicate the evil. The Government of India accepted this recommendation and introduced a Bill in the Legislative Assembly on the 5th September 1932 which proposes to impose penalties on parties to agreements pledging the labour of children and on persons knowingly employing children whose labour has been pledged. The Bill was referred by the Assembly to a Select Committee of the House and the Committee presented their Report on the 16th September 1932. They introduced an important modification in the Bill by providing that an agreement to pledge the labour of a child which is made without detriment to a child and not made in consideration of any benefit other than reasonable wages to be paid for the child's services, and terminable at not more than a week's notice will not be an agreement within the meaning of the definition of such an agreement. At the moment of writing it is possible that the second reading of the Bill will be taken up at the Budget session of the Assembly which began on the 6th February.

Employers' Liability (Re: "Common Employment" and "Assumed Risk").—At page 315 of their Report the Commission recommended that a measure should be enacted which would exempt employers from the defence of common employment and assumed risk in civil suits for damages arising out of employment. Persons injured by accident may have a remedy by a suit for damages against their employer in the civil court and it has been suggested that the law then applicable is inequitable because two defences may be evolved by the employer to defeat claims which he should justly be called upon to meet. One is the defence of common employment, by which an employer can plead that an accident was due to the default of a fellow workman, and the other is the defence of assumed risk, by which an employer is not liable for injury caused to workmen through the ordinary risks of employment and a workman is presumed to have assumed risks which were apparent when he entered upon his occupation. When the Indian Workmen's Compensation Act was first introduced it had in addition to the provisions for workmen's compensation clauses designed to abrogate these defences. In certain cases but the Joint Select Committee of the Legislature deleted the clauses in question apparently because they were not satisfied that the doctrines which were derived from the British Common Law, would be accepted by Indian courts. They observed at the same time that if the doctrines in question were so accepted and were regarded as inequitable they

should be removed for all workmen and not for the limited classes to which the Workmen's Compensation Bill was to apply. There is little evidence to show that the existing position gives rise to hardship but it is possible that suits are not pursued because of the admitted ambiguity of the law and the Royal Commission are of the opinion that as the doubts in question are iniquitable there is need for ensuring that they cannot be invoked. The majority recommend that a measure for this purpose should now be enacted and that it might follow the lines of the clauses deleted in 1923 but should of course be applicable to all workmen.

The Government of India in the Department of Industries and Labour issued a circular letter dated the 3rd February 1932 addressed to all Local Governments of Governors Provinces and the Chief Commissioners of Delhi and Ajmer-Merwara on the subject the Government of India point out that the two main objections taken by the majority of the Select Committee to the proposal were (1) that it was uncertain that the Courts would accept the defence which the doctrines were designed to remove and (2) that if the doctrines were iniquitable they should be removed for all workmen and not only for specified classes. The latter objection in their opinion is met by the Commission's proposal. As regards the former they state that the cases of the kind to which the proposed law would be applicable are naturally rare but that in the only reported case which they have been able to trace (B. A. L. T. 173) the doctrine of common employment was not satisfactorily applied. The Government of India incline to the opinion that the defence in question is iniquitable and they are therefore not disposed to attach much weight to the fact that it is seldom likely to be invoked or to any remaining doubt that there may be as to the readiness of the Courts to apply them. The clarification of the law would in itself be in their view an advantage and they are disposed to favour legislation on the lines proposed by the Commission. The Government of India however requested that Local Governments should consider the possibility of limiting the scope of the law so as to include all workmen covered by the Workmen's Compensation Act or alternatively to include only such of those workmen who are in receipt of more than Rs. 300 per month. The replies forwarded by the local Governments on the subject are under the consideration of the Government of India.

Amendment of the Land Acquisition Act 1894.—A Bill further to amend the Land Acquisition Act 1894, for certain purposes was introduced in the Legislative Assembly on the 12th September 1932. It was decided during the debate that the Bill should be circulated for purpose of eliciting opinion thereon. The Government of India accordingly circulated a Bill for opinion to all Local Governments, Administrations under cover of Local Self Government Department letter dated the 29th September 1932. The Bill is based on the proposal of the Royal Commission on Indian Labour that the Land Acquisition Act be so amended as to enable land to be acquired when it is intended for the housing of labour either by

companies or by other employers. They stated that in a number of instances brought to their notice land suitable for the development of housing schemes had been held at ransom by the owners and that fantastic values were placed upon it as the result of the construction of factories and other industrial concerns in the neighbourhood. The provision of adequate housing for workmen is one of the urgent needs of industry and the present Bill seeks to give effect to that recommendation.

Hours of Work of Dock Labourers.—There is at present no legal restriction on the hours of work of dock labour in India and the Royal Commission who examined this question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day overtime being paid for at 33 1/3 percent over ordinary rates. The Government of India have not been able to arrive at any definite conclusions regarding the practicability of controlling the hours of work in the ports and conditions of dock labour in India and feel a difficulty as to the form which the necessary legislation should take if the recommendations are finally accepted. In a circular letter addressed a circular letter in November 1912 to Local Governments who control Port major or minor asking them to examine the question and to furnish the Government of India with their views. The Government of India have pointed out in their circular letter that if the necessary legislation takes the form of an amendment or an amplification of the Indian Factories Act 1908 it would be straining the scope of the Act thereby and that if it be framed as a separate Act there would be difficulties in the use of the term "employer" and in framing penal sections. They are disposed to the view that the most suitable method of giving statutory effect to the recommendation would be to amend the Indian Factories Act on the analogy of the Factory and Workshop Act 1901 of the United Kingdom expanding the scope of the term "factory" so as to include dock, wharf, quay etc.

The circular letter of the Government of India also raises the question of minimum age for the employment of children in ports. As a result of the consideration given to the Washington Convention fixing the minimum age for admission of children to industrial employment the Indian Legislature passed an Act in 1922 making it obligatory on the Local Government to frame rules under the Indian Ports Act of 1908 prohibiting the employment of children under the age of 12 years upon the handling of goods at piers jetties landing places wharves, quays, docks, warehouses and sheds. This enactment did not prevent children below the prescribed age being employed on the waterside of the ship as it was not clear whether the Act prohibited such employment or not. The matter was put beyond doubt by a subsequent amending Act which covered all employment in handling of goods in any port subject to this Act. The Royal Commission considered that work of this kind is not suitable for children and a system of half time working is not

practicable. They therefore recommended that the minimum age should be raised to 14 years. The Government of India are provisionally in agreement with this recommendation and also with another which suggests that the enforcement of these provisions should be entrusted to the factory inspection staff. They have, however, requested the Local Government to furnish their views on the questions raised after consulting the interests concerned.

Exemption of Salaries and Wages from Attachment.—The Royal Commission have made several recommendations in connexion with the indebtedness of the industrial works and have suggested various methods not only for reducing such indebtedness but also to protect the workers from unnecessary harassment in the matter of the repayment of their debts. Their first recommendation in this connexion refers to the recovery of debts through employers. The Commission state that under the Civil Procedure Code it is possible for a money lender to secure the attachment of the wages of any one who is not a labourer or a domestic servant and they understand that the majority of workers in industry would not be regarded as labourers within the meaning of the Act. But in respect of certain classes of employees, particularly railway servants and the servants of local authorities, the law allows the money lender to use the employer as his debt collector to a much larger extent. In such cases it is possible to attach half of an employee's salary or the amount by which that salary exceeds twenty rupees a month whichever is less. In some cases private employers are required to make similar recoveries although the legality of this is doubtful. Thus in the case of an employee in receipt of a regular salary the money lender can secure an order directing the railway administration to hand over month by month, a large part of the employee's salary until the whole decree has been covered—a period which extends in some cases to years rather than months. The comparative security of railway service further increases the attraction of the railway servant for the money lender and all the evidence

received by the Commission goes to show that the level of indebtedness in terms of wages is higher among railway servants than among industrial employees as a whole. The Commission therefore recommended that the salary and wages of every workman receiving less than Rs 300 a month be exempted entirely from the possibility of attachment. If on examination there are found to be objections to applying this exemption to every one employed on a salary less than Rs 300 a month the Commission consider that the definition of workman in the Workmen's Compensation Act might be suitable.

The Government of India in the Department of Industries and Labour issued a circular letter dated the 25th November 1932 to all Local Governments and Administrations inviting an expression of their views on the subject. The Government of India are of opinion that the Commission were disposed to favour the grant of such exemption to all persons receiving less than Rs 300 a month and they therefore consider that it is desirable to review the questions generally and not solely with regard to industrial employees. Replies to their letter were asked to be submitted by the 1st April 1933.

Extension of Workmen's Compensation to Agriculture and Industry.—In their recommendation No. 234 the Royal Commission suggested that the question of the inclusion of persons employed by the larger agricultural employers and of those employed in reserved forests deserves examination. The Government of India addressed a circular letter dated the 21st December 1931 to all Local Governments and Administrations inviting their views on the subject after consulting the interests concerned. Replies were requested by the 1st June 1932. In the light of the replies received the Government of India arrived at the conclusion that no action is desirable at present on the question of the inclusion in the Workmen's Compensation Act of persons employed by the larger agricultural employers. The proposal for the inclusion of fresh employees is still under consideration.

INDUSTRIAL WORKERS IN INDIA

In 1922 India obtained recognition by the League of Nations as one of the eight chief industrial States in the world. The grounds on which this claim was based are stated in the Memorandum prepared by the India Office which gave the following figures to illustrate the industrial importance of the country—

22,000,000 agricultural work (excluding peasant proprietors) 141,000 maritime workers, lascars, etc., a figure second only to that for the United Kingdom over 20,000,000 workers in industries, including cottage industries, mines and

transport, railway mileage in excess of that in every country except the United States

The figures for the 1931 Population Census for India show that the number of Agricultural Labourers has increased to nearly 31½ million. This figure excludes cultivating owners (27 million), cultivating tenants (34 million), landlords (3½ million) and others (8½ million). The number of earners plus working dependants in Industry Trade Transport and Mines amounts to twenty six millions. Nearly eleven million persons are employed as domestic servants

Factory Labour

467

The latest figures for the number employed in factories are those available in the All India Report for Factories for 1931 which are reproduced in Summary form in the table given below —

Growth of Factories

Year	Number of Factories	Average Daily Number of Persons Employed
1922	5,144	1,361,602
1923	5,985	1,409,173
1924	6,406	1,455,592
1925	6,920	1,494,958
1926	7,251	1,518,391
1927	7,613	1,533,382
1928	7,863	1,520,315
1929	8,129	1,553,169
1930	8,144	1,528,302
1931	8,143	1,431,487

Age and Sex Distribution of Factory Labour

Year	Men	Women	Children	Total
1922	1,086,457	206,887	67,658	1,361,002
1923	1,113,608	221,040	74,620	1,409,173
1924	1,147,729	235,332	72,531	1,455,592
1925	1,173,719	247,614	68,725	1,494,958
1926	1,208,628	240,669	69,094	1,518,391
1927	1,222,602	253,158	57,622	1,533,382
1928	1,216,471	252,933	50,911	1,520,315
1929	1,249,106	257,161	46,843	1,553,169
1930	1,225,420	254,305	47,972	1,528,302
1931	1,174,372	231,184	25,932	1,431,487

Statistics for 1931 (1) By 1 Province

Province	Number of Factories	Average Daily Number of Persons Employed
Madras	1,470	1,37,377
Bombay	1,541	3,41,349
Bengal	1,471	4,80,439
United Provinces	424	83,223
Punjab	600	44,720
Bihar	947	90,812
Bihar and Orissa	280	63,959
Central Provinces and Berar	734	64,388
Assam	622	48,386
North-West Frontier Province	26	1,000
Baluchistan	10	1,731
Ajmer-Merwara	40	13,791
Delhi	46	12,472
Bangalore and Coorg	27	2,743
Total	8,143	1,431,487

Statistics for 1931 (2) By Classes of Concerns

Class of Concerns	Number of Factories	Average Daily Number of Persons Employed
Government and Local Fund Factories	972	130 081
"Cellars	472	608 144
(Cotton Spinning and Weaving)	302	381 201
Iron Mills	109	270 150
Engineering	614	128 040
Railway Workshops	70	53 216
Minerals and Metals	120	47 781
Food Drink and Tobacco	1 084	178 274
Chemicals and Dyestuffs	437	47 704
Paper and Printing	368	90 121
Processes relating to glass wood and stone	864	43 906
Processes connected with skins and hides	93	5 024
Others and Unspecified	2,204	150 445
Miscellaneous	15	7 009
Total	8 113	1,411 487

For the first time since the publication of the above statistics the figures for the number of factories and the persons employed are classified according to perennial and seasonal factories. In 1931 the total number of perennial factories amounted to 3 757 with 1 143 984 workers and the number of seasonal factories amounted to 4 406 with 287 253 workers.

MIGRATION

(The holders of the Indian Year Book regret that it was not possible to revise this section in the light of the 1931 census as the All-India Postal Census Report and the majority of the Provincial Census Reports were not available when we went to press.)

The industrial centres in India are not able to supply the necessary labour that is required for industrial undertakings and there is consequently a considerable amount of migration from other parts of India to such centres. The extent of this migration is given in detail in Chapter III, Vol. I Report of the Census of India for 1921 as follows — The labour reserves are found chiefly among the lower classes of the centre and south of the country. The centre supplies the tea plantations and mining industries of the Eastern provinces; the south meets the southern industrial demand and the bulk of the Burmah and overseas demand while the more technical industries in the cities of the Western provinces are supplied chiefly from the neighbouring agricultural tracts.

Among these provinces and States which attract a larger number of emigrants from other provinces and States are Assam, Bengal, Burma, Bombay, Mysore, Central Provinces and Berar, and Punjab and Delhi. According to the 1921 Census there were nearly a million and a quarter immigrants in Assam as against 75 000 emigrants in Bengal there were more than a million and three-fourths immigrants as against about a quarter of a million emigrants. Bombay gained a little over a million but sent out 568,000 to the other provinces. The population figures for Central Provinces and Berar and Punjab and Delhi show a number of immigrants amounting to more than 600,000 in each case. The number of emigrants from the Central Provinces and Berar amounted to a little more than 400,000 and from Punjab and Delhi to

half a million. In all these cases industrial and other employers were not able to recruit their requirements from their own territories. The position, however, is vastly different in the case of Bihar and Orissa. The United Provinces, Madras, Rajputana and to a small extent Hyderabad (Deccan). The number of emigrants from Bihar and Orissa amounted to nearly two million as against 887,000 immigrants with a net loss of over a million and a half to the provinces. In the case of the United Provinces there were 1 400,000 emigrants as against a little over 400 000 immigrants with a net loss of nearly a million. Madras lost nearly a quarter of a million and Rajputana 625 000.

Within the Provinces — It is neither necessary nor feasible to deal with the various streams of migration between district and district of the same province or within a district. These movements vary according to times and seasons, but it may be useful to show the extent to which and the source from which some of the more important industrial centres draw their labour force.

In Bombay, according to the Census Report for the year 1921 the percentage of the total population which had actually been born in the City has steadily declined at each census. In 1872 the percentage of the persons born in Bombay to total population was 31.1, in 1891 26, in 1911 19.6 and in 1921, 16. An important point, however, to remember in considering these figures is the fact that, whenever possible, workers send their wives to their native places for purposes of confinement. Many of those

provinces of Madras, Bengal the United Provinces Bihar and Orissa the Central Provinces and Assam can by notification in the local official Gazette prohibit all persons from recruiting engaging, inducing or assisting any native of India or any specified class of natives of India to emigrate from the whole or any specified part of the province to any labour district or any specified portion of any labour district, either absolutely or otherwise than in accordance with such of the provisions of the Act as may be specified.

The following are the main types of migration of Indian Labour —

- (1) Casual migration consisting of movements between adjacent villages,
- (2) Temporary movements of labour on works of construction or by exigencies of trade or the stress of famine banias journeys pilgrimages etc
- (3) Periodic migration owing to the seasonal demands for agricultural labour
- (4) Semi permanent migration when the inhabitants of one place migrate to another for trade but return at inter-

vals to their native place where they sometimes even leave their families and spend their declining years and

- (5) Permanent migration where economic or other reasons have caused a permanent displacement of population

In the first three cases the emigrants invariably return to their villages. In the fourth and fifth cases the majority of workers return for a short visit after two or three years, but there is a considerable minority which has settled down at the industrial centres in which they have worked. Evidence is however overwhelming that owing to the home loving character of the Indian worker he seldom or never breaks his contact with his village home. The number of workmen of rural origin who have severed their connexion with their village and with agriculture is very small and is usually confined to such skilled workers as have left their homes permanently to settle in the important centres of factory industry. As the large majority of workers return home annually or biennially there is little disturbance of family life except in the case of Assam where the system of recruitment now in force directly encourages the importation of families, and women are almost as numerous as men in the residential labour population on the tea estates.

RECRUITMENT OF LABOUR

The methods adopted for the recruitment of labour in India have received general condemnation even from employers and the Whitley Commission has much to say on the subject.

Recruitment except in the case of special apprentices and higher paid workers employed on railways, is effected either through Sardars (Recruiters) or Contractors or direct at the mill or factory gates. The difficulties in connexion with recruitment are due (1) to the want of a stable labour force at any particular town or centre (2) to the general illiteracy of the Indian labourer and (3) to the inherent attachment of the worker taking up industrial employment to his village life and home.

The contractor is sent out to overcome the innate conservatism of the Indian peasant. He is helped in his work by the poverty and indebtedness of the peasant and also by occasional bad harvests, but in addition he not infrequently indulges in fraud and misrepresentation by painting a rosy picture of the future that awaits the peasant in a town with its crowded bazaars and other amusements which are absent in the village. The essence of the system is the payment of an advance to the prospective labourer in order to enable him to free himself from his pecuniary difficulties. The contractor retains some form of control over his recruits and takes good care to recover the amount of the advance together with the interest, which is generally calculated at an exorbitant rate. Generally, the employers do not deal directly with the labourers recruited by a contractor. The latter is paid a lump-sum from which he pays his men and retains a portion for himself. In the Central Provinces, however, it is reported that labour is actually purchased from private

contractors at so much per head. The system of recruitment by contractors is most in use in Burma owing to the scarcity of labour in that province and the necessity of recruitment from distant places.

The method of recruitment through Sardars is also dependent on the payment of advances, which however are made at the cost of the employer. The Sardar is an operative already at work in the mill or plantation and is sent out to recruit labour from among his relations acquaintances or neighbours. He is drawn therefore from the same class as the recruits themselves and can therefore be relied on to deal more fairly with them. Another advantage of this system of recruitment is that the men recruited are insured against unemployment and find work waiting for them at their destination. On the other hand, it does not infrequently happen especially in the Tea Gardens in Assam that the Sardar recruits persons who are lured away from their homes by prospects of a bright future and who, on arrival find that conditions of work and wages are not so bright as they imagined it is however only in plantations that this form of recruitment has been used to any appreciable extent.

The recruitment of labour at the mill gate or at the surface of mines is the form of recruitment which is gradually gaining in importance over the other two methods. The news of the very much higher rates of wages paid in towns (which to the village sounds fabulous as he has no idea of the higher cost of living) spreads throughout the countryside and draws large crowds of would be workers. They are to be found at convenient gathering places on the thoroughfare waiting to be picked up for employment.

The older hands also return from their village with groups of friends, relations and neighbours who come in the hope of finding employment in the mills. But the ignorance, simplicity and poverty of the Indian peasant render his exploitation an easy matter. The employer does not recruit himself the men required for his establishment but holds the overseer, jobber or mukadama responsible for the adequate supply of labour in the department. The latter takes the place of the contractor and exacts bribes from the new recruits. He also acts as a money lender and thereby reaps a double harvest from the needy labourer. It would appear therefore that education and organisation are the only means by which Indian workers can escape from the clutches of intermediaries who like harpies are ever ready to prey on them.

In the coalfields in Bihar and Orissa unskilled labour is recruited by means of Sardars. The Sardar visits villages and brings the labour with him and the labour brought by him forms his gang. He has to pay the labour *buckeehah* (kharat) and travelling expenses and for this purpose he frequently receives advances either from the contractor or from the Company concerned. At the Bhowra colliery advances varying from Rs. 3 to Rs. 10 are paid to the recruits in addition to their travelling allowances and food. Such advances are seldom recovered and never if the gang maintains good attendance at work. The Sardar obtains remuneration for his services in various ways. Sometimes he is paid a commission and a salary, but generally he is paid a certain amount on each ton of coal raised by miners working in his gang. Independent recruiters are paid at 9 pies per tub raised. In the Central Provinces the recruiters or mukadams as they are called receive 3 pies per head per week from the individual labourers whom they recruit and wages from the employers.

The Tata Iron and Steel Company at Jamshedpur maintain an Employment Bureau where skilled and unskilled workers are registered and employed. Applicants for work assemble in a yard and daily requirements are selected by the officer in charge. No outside recruitment

is done in the Ahmednagar of the world but in the event of special qualifications being required and no applicants being available the post is advertised in a few leading newspapers.

The methods adopted by different Indian railways for the recruitment of unskilled labour are generally the same as those which obtain in other industries. In the case of workshop men, a trade test is generally given and in every case a medical examination has to be gone through. Special apprentices for the higher grades are engaged by all Railways. The terms and conditions attached to apprenticeship in most cases are similar.

The Royal Commission on Indian Labour has made several recommendations with regard to the employment of the factory worker for the guidance of employers in general. We reproduce below some of the more important of these recommendations—

- (a) Jobbers should be excluded from the engagement and discharge of labour.
- (b) Whenever the scale of the factory permits, a Labour Officer should be appointed directly under the General Manager. His main functions should be in regard to engagements, discharges and discipline.
- (c) Where it is not possible to appoint a whole time Labour Officer the Manager or some responsible officer should retain complete control of engagements and discharges.
- (d) Employers' Associations in co-operation with trade unions should adopt a common policy to stamp out bribery.
- (e) Where women are engaged in substantial numbers at least one educated woman should be appointed in charge of their welfare and supervision throughout the factory.
- (f) Workers should be encouraged to apply for definite period of leave and should be with a promise that on their return at the proper time they will be able to resume their old work. Wherever possible an allowance should be given to the worker who goes on leave after approved service.

RECRUITMENT FOR ASSAM.

The Assam Labour and Emigration Act 1901 was designed mainly to regulate the recruitment and engagement of indentured labour. It had not been possible for some years for any worker in Assam to be subjected to a penal contract and in consequence of this and other changes the law became entirely unsuited to present conditions. Attempts were made by amending Acts in 1908, 1915 and 1927 to adapt the Act to meet existing conditions. Substantial parts of the original Act were repealed and large numbers of rules framed in an endeavour to use the Act to regulate the recruitment of emigrants who are subject to no indenture. These changes proved inadequate and they made the law extremely confused. Large parts of the surviving provisions of the Act became completely ineffective and those provisions which were operative were open to weighty criticisms.

During the years 1926-1928 the Government of India carried on consultations with the Local Governments in regard to amending the law governing recruitment of labour for the Assam tea gardens. In the meanwhile the Royal Commission on Labour had been appointed and they collected a large amount of evidence on the subject. The Commission recommended the replacement of the existing legislation by a new enactment and suggested that the power conferred by section 3 of the Assam Labour and Emigration Act of 1901 to prohibit recruitment in Assam in particular localities should be withdrawn immediately. They recommended that the new Act should provide (a) that no selected emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the Tea Industry or by suitable groups of employers and approved by the Local Government or by

such authority as it may appoint. (b) that the Government of India should have power to frame rules regarding transport arrangements in particular for the laying down of certain specified routes to Assam and for the maintenance of depots at necessary intervals and (c) that in the event of the recurrence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed garden sirdars and licensed recruiters. Another recommendation of the Commission was that the Assam Labour Board should be abolished and in its place the Government of India should appoint a Protector of Immigrants in Assam to look after the interests of emigrants from other Provinces. With regard to the question of repatriation, The Commission recommended that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employers' expense and that the Protector should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the ground of health unsuitability of the work to his personal capacity or for other sufficient reason.

The Government of India framed a Bill called the Tea Districts Emigrant Labour Bill based mainly on the recommendations of the Commission but with variations in respect of minor details. The Bill was introduced in the Legislative Assembly on the 11th March 1932 and was circulated to all Local Governments for opinion. It was then referred to a select Committee who presented their Report to the Assembly on the 5th September 1932. The Bill was amended by the select Committee was passed by the Indian Legislature in September 1932 and received the assent of the Governor General on the 28th October 1932. The new Act came into operation from the 1st April 1933.

The Tea Districts Emigrant Labour Act 1932 extends to the whole of British India including the Southal Parganas and repeals the Assam Labour and Migration Act 1901 and the subsequent amending Acts. The first object of the Act is to make it possible on the one hand to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam Tea Gardens as may be justified and required by the interests of emigrants and potential emigrants and on the other hand, to ensure that no restrictions are imposed which are not justified. Local Governments are empowered, subject to the control of the Government of India to impose control over the forwarding of assisted emigrants (Chapter III) or over both their recruitment and their forwarding as occasion may dictate (Chapters III and IV). Employers will be prevented from recruiting otherwise than by means of certificated garden sirdars or licensed recruiters. It is made unlawful to assist persons under 16 to emigrate unless they are accompanied by their parents or guardians. With regard to the question of repatriation (Chapter II) every emigrant labourer on the expiry of a period of three years from the date of his entry into Assam will have the right of repatriation as against the employer employing him at such expiry (Section 7) and any emigrant labourer who

before the expiry of three years from his entry into Assam is dismissed by his employer otherwise than for wilful and serious misconduct will also have the right of repatriation (Section 8(1)). It will also be possible to claim repatriation within three years in the event of the emigrant falling ill or being provided with suitable work or having his wages unjustly withheld or for any other sufficient cause. (Section 10 (1)). Further repatriation can be ordered at any time by a criminal court in the case of a labourer who has been assaulted by the employer or by his agent (Section 11). Where an employer fails to make all the necessary arrangements for the repatriation of a labourer working under him within fifteen days from the date on which a right of repatriation accrues to an emigrant labourer the controller may direct the employer concerned to dispatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (Sections 13 and 15).

Section 8 of the Act makes provision for the appointment of a Controller of Emigrants with a staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish and the charges are to be met from an annual cess called the Immigrant Labour cess which shall be levied at such rate not exceeding Rs 5 per cent on each emigrant as the Governor General in Council may by a notification in the Gazette of India determine for each year of levy.

The provisions of the Act are intended to apply only to migration for work on tea plantations in the eight specified districts in Assam in the first instance, but power is retained to extend its application to other industries and to other districts in Assam if necessary (Section 58).

Labour Statistics—The Annual Report on the working of the Assam Labour Board during the year ending the 30th June 1932 has been published. The Report shows that the total number of persons recruited during the year was 49,807 as against 50,506 in the previous year. The average of advances to garden sirdars for each adult recruit fell in 25 and rose in 3 agencies as compared with the preceding year. No cases occurred in which the local Agents were found to be extravagant or indifferent in the matter of giving advances to sirdars. The total number of garden sirdars prosecuted for offences in connexion with recruitment was 32 as compared with 69 in the previous year. The rate of cess on garden sirdars and emigrants was eight annas per head during 1931-32. The actual receipts from the cess amounted to Rs 28,721 8-0.

Reforms in the Bombay Cotton Mill Industry—In a circular letter dated the 8th January 1930 the Bombay Millowners Association have instructed all mills affiliated to the Association to introduce wherever possible a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. The introduction of a system for providing Discharge Certificates to operatives leaving service has also been recommended,

The certificates are to contain a record of the service of the operative concerned and in all cases of recruitment the men presenting them selves for employment will be asked to produce their Discharge Certificates. Notices are to be posted at all mills stating (a) that all persons will be engaged by the Manager or by the head of the department concerned and (b) that any

heads of departments assistants or jobbers accepting bribes from the workpeople will be instantly dismissed.

Several groups of mills are considering the possibility of employing labour officers who will be responsible for the direct recruitment of labour and for welfare work generally.

ABSENTEEISM AND LABOUR TURNOVER.

Though there is meagre statistical information available on this subject it may be stated with a fair amount of accuracy that the Indian worker is more habituated to absent himself from work than his prototype in other countries. He has yet to get himself thoroughly adapted to the industrial environment in which he finds himself. The reasons for his absence are not always connected with his love of rest but in many cases absence is due to causes beyond his control such as sickness domestic difficulties etc. The effects which poor and indifferent housing have on his work have been dealt with in the Section on Industrial Housing.

The Factory Labour Commission of 1907 made an inquiry into the number of absent workers and came to the conclusion that the average worker took 2 days off every month and a further holiday of from 3 to 7 weeks every year. In addition he receives the weekly holiday and from 4 to 10 Indian holidays during the year. The question of absenteeism received the attention of the Indian Lark Board (Cotton Textile Industry) and it was urged in evidence before them that the efficiency of labour in Bombay was greatly reduced by the high percentage of absenteeism among the operatives. The Board came to the conclusion that Ahmedabad had a great advantage over Bombay in the matter of absenteeism, both in respect of a

low rate throughout the year and also of the absence of the wide seasonal variations which were apparent in other centres of the textile industry. They therefore recommended that in order to minimise the effect of absenteeism there should be a general adoption of a system already in force in a few mills in Bombay under which a certain number of spare looms are entertained in each department except the weaving. The Board said the percentage of extra men in each department is not necessarily the same but we were given to understand that spread over the whole of the mill it usually worked out at about 10 per cent.

The Labour Office of the Government of Bombay publishes in the *Labour Gazette* every month statistics of absenteeism in the textile mills at the important centres of the cotton industry in the Bombay Presidency and in engineering workshops of the Bombay and Karachi Port Trusts. If figures of absenteeism for each day during any month are examined it is found that they are higher on days immediately following any day. The following table gives the figures for percentage absent each month by month for the year 1932 with averages for the whole year for cotton textile mills in four important centres of the Bombay Presidency.

PERCENTAGE ABSENTEEISM IN THE TEXTILE INDUSTRY

Month	Bombay	Ahmedabad	Sholapur	Boroch
January	8.4	3.70	1.24	7.81
February	9.72	3.64	15.82	9.42
March	10.04	3.86	16.20	8.44
April	9.94	4.10	16.98	9.15
May	10.43	4.22	18.60	†
June	9.30	3.68	16.15	†
July	8.70	3.53	12.59	†
August	8.60	3.61	10.98	†
September	9.03	3.89	13.64	†
October	8.31	3.67	11.74	†
November	8.57	3.46	13.01	8.67
December	8.49	3.43	13.43	5.71
Average for year	8.14	3.74	14.09	8.20

Information not available

In the Electrical and Mechanical Departments of Railways absenteeism generally amounts from 10 to 11 per cent. As in cotton mills absenteeism is greater immediately after pay day. In Railways in Burma absenteeism is lower and roughly amounts to 2.50 per cent.

Labour Turnover—A charge is very often levelled against the Indian worker that owing to his migratory character he changes his place of employment very frequently and that this results in a high rate of labour turnover. There is however very little information available regarding the average period of service or the rates of turnover at important industrial centres in India. In the case of the Linpress Mills at Nagpur it has been estimated that since 1908, the average period of continuous service of the employees amounted to 7.89 years. In another cotton mill in the Central Provinces the average duration of employment worked out at about 40 months while in the case of other factories it roughly amounted to about 30 months. Out of a total number of 3,700 workers engaged in the Pench Valley Coal Mines it was found that 1,650 workers were in employment for less than a year, 650 from 1 to 2 years, 700 from 2 to 3 years and 800 workers had more than 3 years continuous service to their credit. In the manganese mines in the Central Provinces the average duration of employment comes to about 9 to 10 months for the whole of the labour force in any one year. One to two years is on an average the period of employment of workers in the Tata Iron and Steel Works. The total labour turnover during normal working for the three years 1925-1926 and 1927, in the same Works amounted to 35.4 per cent, 31.3 per cent and 31.1 per cent respectively. In the Indian Cable and Company in Bilhar and Orissa however skilled labour has remained practically unchanged during the last five years but the unskilled workers recruited from the aboriginal class had changed to the extent of about 30 per cent annually. In one of the mills at Cawnpore the average period of continuous service amounted to 8.87 years.

The Labour Office conducted a special enquiry into the length of service of cotton mill workers in Bombay City in 1927-28. A sample of 1 in 10 tenements was decided upon and the information was collected on suitable schedules by the L. I. O. Investigators of the Labour Office from the inmates of such tenements who were reported to be cotton mill workers. Only the predominant working class localities were visited for the purposes of the enquiry and the total number of schedules accepted for final tabulation was 1,348.

Of the 1,348 workers 968 or 73.29 per cent were men and 380 or 26.71 per cent were women.

Nearly 31 per cent of the operatives began work in the mills before the 15th year, 38 per cent between the 16th and the 20th year, 32 per cent between the 20th and the 25th year and the remaining 9 per cent joined the first mill after they had attained the age of 30.

Sixty-three per cent of the workers were born in the Konkan and 27 per cent in the Deccan while the rest came from different parts of the country. Not a single worker gave his place of origin as Bombay City.

About 48 per cent. of the workers covered by the sample continued in the employment of the same mill without change, 34 per cent served in two or three mills and 18 per cent had served in 4 or more mills. The highest number of mills served by an individual was 15. The cause of leaving the mills was for going to native place in 26 per cent cases, low wages and for bettering prospects in 21 per cent cases, absence due to illness in 14 per cent cases and retrenchment in 10 per cent cases. Other causes for leaving mills were unsuitable conditions of work, dismissal, strike, resignation, etc.

The approximate period of total service (including the period of non attendance) was reported to be less than 5 years in 37.54 per cent cases, 5 to 10 years in 23.87 per cent cases, 10 to 15 years in 15.88 per cent cases, 15 to 20 years in 9.13 per cent cases and more than 20 years in 14.08 per cent cases. The percentages of workers who had not changed mills was 67 in the case of operatives with less than 5 years service and 42 for workers with 5 to 10 years service. In the other service groups the percentage of operatives working in the same mill varied between 23 and 42.

The actual active service was reported to be less than 5 years in 46.51 per cent cases, 5 to 10 years in 24.26 per cent cases, 10 to 15 years in 13.95 per cent cases and 15 to 20 years in 7.20 per cent cases. In the remaining 8.08 per cent cases the actual service was more than 20 years.

A large number of workers in the age groups 15-20 and 20-25 had served for a period of less than 5 years while the most common period of service in the age group 25-30 was between 5 and 10 years. In the age group 30-35 about 30 per cent of the workers had served for less than 5 years and 19 per cent for a period of 5 to 10 years. Among workers of 35 to 40 years of age, the number of those falling in each of the first five service groups was between 16 and 20 per cent.

LABOUR IN FACTORIES

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881 as amended in 1891. Under the chief provisions of the amended Act Local Governments were empowered to appoint Inspectors of Factories and Certifying Surgeons to testify, as to the age of children. A mid day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts and Sunday labour was prohibited subject to certain exceptions. The hours of employment for women were limited to 11 with intervals of rest amounting to at least an hour and a half, their employment between 8 p.m. and 6 a.m. was prohibited as a general rule except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to 7 and their employment at night-time was forbidden. Children below the age of 9 were not to be employed. Provision was made for fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding etc.

The next Factory Act to be passed into law was Act XII of 1911. This Act extended the definition of factory so as to include seasonal factories working for less than 4 months in the year, shortened the hours within which children, as a general rule, women might be employed and further restricted the employment of women by night by allowing it only in the case of cotton spinning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives making inspection more effective and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act for the first time, applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain exceptions, no person shall be employed in any textile factory for more than 12 hours in any one day. It also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions which were factories worked in accordance with an approved system of shifts) no person may be employed before 5.30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The Acts now in force.—The ratification by India of the Conventions adopted by the International Labour Conference held in Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911. This was undertaken during 1921 and the Indian Factories Amendment Act 1922 introduced a series of important reforms including the adoption of a 60-hours week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extension of the Act to a large number of small factories, drastic restriction of the exempting provisions etc. The principal object of the amending Act of 1922 was the

removal of a difficulty which had arisen in connection with the law relating to the weekly holiday. The experience gained during the three years which immediately followed the revision of the Act in 1911 indicated that the amending Act had worked smoothly and that the main principles followed in 1922 commanded general acceptance. It was not considered necessary therefore to modify any of the main principles of the Act but several administrative difficulties had arisen in connection with some sections of the Act—one such difficulty relating to Section 21 which provided for intervals. Local Governments were asked in June 1925 to consider a possible solution of the difficulty and to bring to the notice of the Government of India any difficulties which might have arisen in connection with other provisions. On receipt of their replies a conference of Chief Inspectors of Factories was convened. The conference recommended a number of alterations designed by allowing greater elasticity in some directions and by increasing control in others to make for smoother working. The Factories Amendment Act of 1926 was therefore passed on the recommendations of that conference and on the opinions received from the Local Governments. The more important alterations effected include the widening of the definition of factories so as to bring within the control of the Act such establishments as electrical Generating Stations, water works etc. and the prevention of the issue of age certificates by Certifying Surgeons to children who are not fit for employment, the prevention of cleaning machinery in motion even by men in cases where Local Governments were of opinion that the work is attended by danger to the operatives, a clearer definition of the periods prescribed for intervals of rest, and, while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limits for hours of work were not exceeded.

Hours of Work.—The Indian Factories Act prescribes a daily as well as a weekly limit to the hours of work in factories and provides for rest intervals and for a weekly holiday. Section 28 of the Act provides that no person shall be employed in any factory for more than 11 hours in any one day, and Section 27 provides that no person shall be employed in a factory for more than 60 hours in any one week. Section 21 of the Act makes it obligatory for the occupier of a factory to provide for each person employed a rest period of at least one hour at intervals not exceeding 6 hours or at the request of the employees concerned two rest periods of half an hour each at intervals not exceeding 5 hours, the total duration of the periods of rest on that day not being less than one hour for each period of 6 hours worked generally. With the previous sanction of the Local Government and at the request of the employees concerned the rest interval may also be reduced to half an hour for each male person provided that he is not employed for more than 5½ hours on each working day and is not required to work for more than five hours continuously. For children, Section 23 (c) provides that no child shall be employed

in a factory for more than 6 hours in any one day Section 21 (b) provides that for each child working more than $\frac{1}{2}$ hours in any one day a period of rest of not less than half an hour shall be given and the period of rest has to be so fixed that no child shall be required to work continuously for more than 4 hours. Sections 23 (b) and 24 (a) further provide that no child or woman may be employed in any factory before half past five o'clock in the morning or after 7 o'clock in the evening. Under Section 25 a child cannot be employed in two factories on the same day but adults may be so employed in such circumstances as may be prescribed. Under the provisions of Section 26 every Manager of a factory has to fix specified hours for the employment of each person employed in such factory and no person is allowed to be employed except during such specified hours. The Governments of Madras, Bombay, the United Provinces, the Punjab and the Central Provinces are the only Local Governments which have prescribed the circumstances under which adults may be employed in more than one factory on the same day. The rules framed by these Local Governments invest the Inspector of Factories with the power to sanction such employment if he is satisfied that the adults concerned are not employed for more than 10 hours on any one day and that they received the weekly holiday prescribed by Section 22 of the Act. In addition to the notified hours of work for particular periods, every factory has to maintain a register of all persons employed in a factory in the form prescribed by the Local Government showing their hours of work and the nature of their respective employment.

Proposed Amendment of the Factories Act following the Recommendations of the Royal Commission on Indian Labour—The Royal Commission made several very important recommendations for substantial amendments of the Indian Factories Act 1911 as amended by the Amending Acts of 1922, 1923, 1926 and 1931 firstly for the reduction of the maximum limits of daily and weekly hours of work in perennial factories and for the better regulation of such hours, secondly for the improvement of working conditions in factories and thirdly for a more effective observance on the part of the factory owners of the requirements of the Act. The Government of India in the Department of Industries and Labour issued a circular letter dated the 10th June 1932 addressed to all Local Governments and Administrations forwarding a draft Bill intended to consolidate the present law regarding the regulation of power units, factories and incorporating the majority of the Commission's recommendations. The Commission also made several suggestions with regard to the control of factories not using power nearly all of which are at present unregulated. The Government of India propose a new and separate Act in respect of such factories and they are at present engaged in drafting a Bill covering the Commission's recommendations in the matter. The following are the more important additional matters proposed to be covered by the consolidating Act—

(a) A distinction is to be drawn between seasonal and perennial factories, i.e., those

working for less than 180 and for more than 180 days in the year.

(b) Factory operatives are at present divided into two age groups: (1) Adults and (2) Children i.e., persons over 15 and under 15 years of age. It is now proposed to introduce a third age group of Young Persons i.e., persons over the age of 15 years and under the age of sixteen years who have not been certified as fit for adult employment such Young Persons as have not been so certified are to be deemed to be children.

(c) It is proposed that the existing maximum limits of eleven hours per day and sixty hours per week should continue to be observed in the case of seasonal factories and that the maximum hours of work to be permitted in the case of works in perennial factories should be reduced to two hours per day and 54 hours per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week subject to the condition that they shall not be employed for more than 108 hours in any fortnight. The maximum hours of work permitted in the case of children is five hours per day both in seasonal and in perennial factories.

(d) The Bill proposes to introduce into the Act for the first time the principle of spread over i.e., the limitation of the period of the number of consecutive hours during which the daily limits of hours of work may be availed of by the owner or an occupier of a factory. The spread over in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half consecutive hours but the continuous period of eleven free hours in every twenty four hours in the case of adults must include the hours between 10 p.m. and 6 a.m. in the case of women and of persons over fifteen and under sixteen years of age. The continuous period of sixteen and a half free hours in the case of children must include the hours between 7 p.m. and 5.30 a.m. as at present.

(e) The existing provisions with regard to the control of artificial humidification are to be expanded by prescribing serious discomfort to the operatives as a further criterion in addition to injury to health, and the Bill also proposes to give power to Local Governments to authorize an Inspector to call upon Managers of factories to carry out specific measures for increasing the cooling power of the air where it is of the opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort provided that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(f) With regard to welfare the Bill includes provisions for the maintenance of (1) a sufficient and suitable supply of water for washing for the use of persons employed in processes involving contact with poisonous or obnoxious substances, (2) adequate shelters for men in factories employing more than 250 persons, rooms reserved

for the use of children of women employed in factories employing more than 250 women and (4) first aid appliances. Powers are to be given to Local Governments to frame rules in respect of the last three matters. The Government of India, however, have not accepted the recommendation of the Royal Commission with regard to giving power to Local Governments to issue welfare orders as an amendment to the Secretary of State in England under Section 1 of the Public Factories Act (Miscellaneous Provisions) Act 1916. This is on the opinion that the matters to be covered by such welfare orders should have the approval of the Legislature and should not be imposed on factory owners by the Executive Government.

(g) Local Governments are to be given power to make rules prescribing the minimum height to be attained by children seeking employment in factories or in any class of factories, and when such a standard has been prescribed no child failing to attain it can be certified as fit for employment in a factory.

(i) Inspectors are to be granted power to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety, and Local Governments are to be empowered to make rules for the furnishing by factories of certain rate of statistics.

(k) The maximum amount of overtime that can be worked by a class of any exemption granted under the Act is to be limited and payment for overtime is to be made at a rate and a quarter for all work in excess of 4 hours a week in particular factories and at a time for hours in excess of 60 per week in the case of seasonal factories.

(l) No exemptions are to be granted in respect of the provisions for spread over prohibition of night work between 10 p.m. and 5 a.m. and of the weekly limits of hours of work to women and persons under the age of sixteen years, but the grant of the existing exemption in the case of women employed in fish curing and skinning factories is to be permitted. The Government of India have not proposed any further restriction in the present range of exemptions but they have asked the Local Governments to give careful consideration to the question.

(4) The existing Sections 21, 35 and 36 are to be entirely re-cast in order to provide more effective methods for the maintenance of records and registers of employment, the printing of notices for the benefit of the workers of the hours of employment, the prescribed absences of the factories, the Act weekly holidays etc. and for the notification of these notices and any changes proposed to be made in them to inspectors of factories.

(5) Occasional or periodical returns relating to the wages paid in factories as may be required by rules to be framed by the Government General in Council are to be made compulsory and

(m) Higher penalties and fines are to be prescribed for owners or owners of factories who have been previously convicted for having committed the same offence.

The Local Governments were asked to submit their proposals to the above proposals incorporated in the Draft Bill prepared by the Government of India by the 1st December 1912. It is considered unlikely that the Draft Bill will be introduced in the Legislative Assembly in the near future.

The latest statistics available in connection with the administration of the Indian Factories Act are for 1931. The data published in connection with the normal weekly hours of work show that for the whole of British India men were required to work for more than 54 hours a week in 472 factories, above 48 and not above 54 in 381 factories and not above 48 hours per week in 231 factories. In the case of those factories employing women 236 required female workers to work for more than 54 hours per week whereas 184 fixed their hours at below 48 per week. 184 factories had hours above 48 but not above 54. Out of the 1136 factories employing children 427 had hours below 30 for children and 700 above 30 but not above 48—the maximum permitted by the Act. The details in connection with the various provinces will be found in summary form in the All India Factories Reports or in a more detailed form in the Provincial Reports themselves. The statistics of factories do not show the hours of work in particular industries.

All railway workshops come under the Indian Factories Act. Hours of work in railway workshops in all provinces generally average 8 per day and 48 per week. In most cases the hours are so arranged as to provide for a half day off on Saturday provided that a total of 48 hours is worked during any particular week.

Employment of Children.—By the Amendment Act of 1922 the maximum age of children was raised from 14 to 15 years and the minimum age from 9 to 12. Section 23 of the Act provides that no child shall be employed in any factory unless he is in possession of a certificate granted by a Certifying Surgeon showing that he is not less than 12 years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate. Further no child is allowed to be employed in any factory before half past five o'clock in the morning or after seven o'clock in the evening, and no child is to be employed for more than six hours in any one day. The number of children employed in factories during the years 1922 to 1931 is shown in the following table—

Year	Total
1922	67,658
1923	74,620
1924	72,431
1925	68,725
1926	69,084
1927	57,582
1928	50,911
1929	46,843
1930	37,972
1931	26,932

An examination of the figures in the above table will show that the number of children employed rose from 87,058 to 74,820 in 1923. This was due to the fact that the ten factories in Assam which employed about 11,000 children were brought within the scope of the Act for the first time in that year. Further, the amendment of the Act in 1922 did not apply to children who were lawfully employed in a factory on or before the 1st July 1921 and it was not until 1924 that full effect was given to the new age restrictions for children.

There has been a steady decline in the number of children employed. In the textile mills in Bombay City there are none.

Employment of Women.—The number of women employed in factories during the years 1921 to 1926 increased steadily from 206,887 employed in 1922 to 267,161 employed in 1926. But the number of women employed since 1926 has fallen perceptibly, the figures for 1930 and 1931 being 254,905 and 231,183 respectively. The large increase in the employment of women was due partly to the restrictions imposed on the employment of children and partly to the inclusion within the scope of the Act of all quasi agricultural factories, for example, in the tea gardens which are dependent on female labour to a larger extent than other factories. An important change which the revision of 1922 made in connection with the employment of women was the repeal of Section 27 of the Act of 1911 which permitted the employment of women at night in spinning factories. In view of this amendment the Government of India considered that they were

in a position to ratify the Convention concerning the employment of women during the night adopted by the First International Labour Conference held at Washington in 1919 without undertaking any further legislation.

Overtime.—Section 31 of the Indian Factories Act provides that in those factories where exemptions are granted from the provision that no person shall be employed in a factory for more than 60 hours in any one week, every person employed in such a factory for more than 60 hours in any one week shall be paid, in respect of overtime worked, at a rate which shall be at least one and a quarter times the rate at which he is normally paid. In most of those factories which work normally less than 60 hours per week overtime is paid for at normal rates up to 60 hours per week and at a time and a quarter for overtime work over 60 hours. Some factories however, pay either the full time and a quarter rate to be granted under the Factories Act for all overtime worked over and above the normal daily hours or even grant higher rates irrespective of the weekly limitation of 60 hours under the Act. No detailed statistics are available to show the number of workers who were paid overtime during any particular period except in the case of a few Railways and some of the larger industrial organisations. The Draft Bill circulated by the Government of India last year however proposes to fix maximum limits on the number of hours for which overtime work may be permitted and for the payment of overtime at a time and a quarter in perennial factories for hours over 54 a week and at a time and a half in seasonal factories for hours over 60 a week.

LABOUR IN MINES

The conditions of employment of labour in mines are governed by the provisions of the Indian Mines Act, 1923, which came into force with effect from the 1st July 1924 replacing the former enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff, but it contained no provisions regulating the employment of labour.

Section 23 of the Indian Mines Act of 1923 limited weekly hours of miners to 54 underground and to 60 above but no limits were prescribed for daily hours. In a Bill further to amend the Act for certain purposes introduced by the Government of India in the Legislative Assembly in March 1927 it was proposed to fix the maximum limit for daily hours at twelve. There was a considerable body of opinion in favour of enforcing an eight hour day and this was also the opinion of a minority of the select Committee appointed by the Assembly to consider the Bill. The majority of the Committee however adhered to the principle of a twelve hour shift as proposed in the Bill but agreed that an eight hour shift should be gradually worked up to. They recommended to Government that after the new provisions had been in operation for three years, the position should be again reviewed as to whether an eight hour shift could be introduced. A daily limit of 12 hours was thus imposed by the Amending Act of 1928 and this was to be brought into effect from April 1930.

Recommendations of the Royal Commission

The Royal Commission on Labour which reviewed the whole position came to conclusions similar to those reached by the Select Committee. A minority of the Commission advocated the reduction of the daily limit to eight hours while the majority supported the recommendation of the majority of the Select Committee, and in addition suggested that weekly hours above ground should be limited to 54. In the mean while, the fifteenth session of the International Labour Conference adopted a Draft Convention concerning hours of work in coal mines, framed solely with reference to conditions in European countries. This convention prescribes that the hours of work should be limited to 72 per day in underground coal mines and to 8 hours a day and 48 hours a week in open coal mines. The convention was placed before the Legislative Assembly on the 24th February and before the Council of State on the 2nd March 1932 and resolutions were adopted by both the Chambers to the effect that Government should examine the possibility of reducing the statutory limits for hours of work in mines and that the results of this examination should be placed before them.

Having regard to the above resolution and to the fact that nearly three years have elapsed since the Act of 1928 came into full effect, the Government of India have taken up the re-examination of the question. They are of

opinion that the present is the most opportune time for effecting a reduction in hours of work in mines, and that nine hours would be as low a daily limit as is reasonable. They are provisionally disposed to agree with the Royal Commission's recommendation that the weekly hours above ground should not exceed 54. The Government of India particularly desire opinions on the question of regulating hours in mines, and they addressed a circular letter dated the 21st September 1931 to Local Governments inviting their views in the matter.

Labour with which they are provisionally in agreement.

(a) No child under the age of 14 years should be permitted to work in or about mines.

(b) Minor accidents should be reported weekly to the Chief Inspector through the District Magistrate and

(c) It should be made obligatory for Local Governments to publish reports of Committees and Courts of Inquiry appointed by them under the Act.

The circular letter of the Government of India also refers to the following recommendations of the Royal Commission on Indian Mines —

Number of Mines — The following table gives the number of mines which came under the Act each year classified according to the minerals mined —

Year	Number of mines					Total Number of all mines
	Coal	Mica	Manganese	Flint and Wolfram	Other minerals	
1924	846	513	186	87	172	1 804
1925	810	571	214	204	212	2 011
1926	722	601	221	216	143	1 897
1927	644	630	220	200	206	1 902
1928	556	474	184	203	331	1 946
1929	548	498	125	184	375	1 732
1930	549	508	52	173	352	1 669
1931	510	542	56	146	343	1 417

Number employed — The number of persons employed in mines during the years 1924-1932 were as follows —

Year	Total No of mines which came under the Act	Number of persons employed		
		Below Ground	Above Ground	Total
1924	1 804	1 67 779	90 498	2 58 277
1925	2 011	1 68 554	84 303	2 53 857
1926	1 897	1 69 371	70 742	2 40 113
1927	1 902	1 66 341	72 910	2 39 250
1928	1 946	1 67 398	70 273	2 37 671
1929	1 732	1 69 908	69 783	2 39 691
1930	1 669	1 51 915	68 762	2 20 677
1931	1 417	1 70 638	60 144	2 30 782

The sex distribution of the persons employed in mines during the years 1926 to 1932 was as shown below —

Year	Number of males employed			Number of females employed		
	Underground	In open workings	On the surface	Underground	In open workings	On the surface
1926	86 843	43 306	51 967	31 889	27 833	18 772
1927	86 766	50 028	55 903	31 550	27 697	19 046
1928	86 155	51 005	55 480	31 735	28 453	17 243
1929	92 856	54 235	51 964	24 089	23 723	17 839
1930	101 849	60 306	52 709	18 694	21 186	17 043
1931	96 385	39 833	45 157	16 541	16 079	14 367

Labour on Railways.—All railway work shops come under the administration of the Factories Act. The Indian railways employ nearly a quarter of a million workers in other occupations for whom provision for the control of their working hours has been made under the Hours of Employment Rules 1930 framed under the Indian Railways Amendment Act 1929.

The Conventions adopted by the International Labour Conference in 1919 and 1921 prescribed a 60-hour week and a weekly rest of not less than 24 consecutive hours for all workers in British India employed in factories in mines and in such branches of railway work as may be specified for this purpose by the competent authority. The Indian Factories Act which was amended in 1922 to give effect to the Conventions limited the hours of work in factories to 11 in any one day and to 60 in any one week. Provisions were also made for intervals of rest and a weekly holiday. Similar limitations were imposed under the Indian Mines Act of 1923 in respect of colliery staff. Both these restrictions apply to factories and mines controlled by railway administrations. The application of the Conventions to other departments of railway organisation was found to be a problem beset with many difficulties and has been a subject of prolonged investigations. Orders were issued by the Railway Board in 1921 that the 60-hour week should be adopted for station staff not employed in connection with the working of trains. The Indian Railway Conference Association drew up a set of rules in 1927 and these received the general approval not only of the Railway Board but also of the Boards of

Directors of the lines managed by companies. Subsequently, however, it was found that these rules while they aimed at applying the spirit of the Conventions did not adequately fulfil the statutory obligations imposed upon Government by the ratification of the Conventions. The whole question was therefore again exhaustively reviewed and a Bill amending the Indian Railways Act with the object of empowering the Governor-General in Council to make rules on the subject was introduced in the Legislative Assembly in the autumn session of 1929 and was referred for consideration to a Select Committee. The Amending Act was passed in the same year, and Hours of Employment Rules were drawn up during the following year.

Working of overtime on Indian railways is more prevalent on construction than on the open line due to (1) the working season in the monsoon areas being confined to eight months in the year, (2) special measures taken to speed up all heavy work to avoid the locking up of capital and (3) wet foundation work in bridges which necessitates continuous work. Usually overtime in such cases is paid at a rate fixed beforehand.

Seamen.—The Indian Merchant Shipping Act 1923, provides that no seaman shall be signed on for service on a ship unless he enters into a contract in the manner specified with the Master of the ship. All agreements entered into between Masters and Seamen for service on foreign going ships have to be signed in the presence of a Shipping Master. The agreement forms contain the rules and regulations provided for under the Act for maintaining discipline and for the fines which may be inflicted for the breach thereof.

CONTRACT LABOUR

In most industrial concerns in India work in connection with building, loading and unloading, carting, receiving and despatching of goods and work involving the employment of unskilled labour over which supervision is either difficult or costly is given out on contract. In the textile mills industry work in connection with bleaching and dyeing is also generally done on contract at all centres. In the cotton mills in Ahmedabad work in the Mixing and Waste Room and the Yarn Bundling and Baling Department in the Drawing Department and Beam Carrying is given out on contract in various mills. In most cases no supervision is exercised over the labour engaged by the contractor to whom the contract is given. Perhaps the most efficient method of control and supervision over contract labour is that which obtains on several railways. This will be dealt with separately lower down. Exceptions to the general remarks made above are as follows:

In the coal mines in Bihar and Orissa contrac-

tors are employed by a large number of collieries to provide the labour required for cutting the coal and loading it on wagons. The contractors are paid at a fixed rate per ton for all coal loaded on wagons. In some cases however the rate paid per ton is increased either because coal is being extracted from difficult places in the mine or because the contractor has difficulties in maintaining his labour supply. The extent to which contractors are employed is considerable and probably more than half the coal raised in the Jharia coal fields is raised on the contract system. Definite figures are not available but the Indian Mining Association reports that 90 per cent of the coal raised in the mines belonging to that Association in the Jharia coal fields is raised by contract labour. In some cases contractors are only employed to provide the labour for cutting the coal. The contractor is generally responsible only for raising the coal while the colliery supervising staff is responsible for seeing that the mines are run safely.

UNEMPLOYMENT.

The problems connected with unemployment in India are quite different from the problems which have arisen in highly industrialised countries like England, the United States of America and Germany. In the latter countries labour is divided into two fairly distinct classes (1) industrial and (2) agricultural. During periods of depression in industry those workers who are thrown out of employment either on account of a temporary or a partial closing down of concerns cannot fall back upon agriculture for earning their livelihood. It is necessary to repeat here, in order to understand this question clearly, that more than 70 per cent of the population of India derive their livelihood from various occupations in connection with agriculture. This does not mean that agriculture is a perennial source of employment. Considerable unemployment and distress occurs during periods when the monsoon fails. Even during those years when the monsoon is generally successful there are usually parts of the country where the rainfall is deficient and there is not enough scope for the employment of all the labour available. Both the Government of India and the various Provincial Governments have devised various schemes for famine relief and the variations in the visitations of nature with their consequent periods of prosperity and distress have now been brought more effectively under human control than ever before in the history of India. It is not necessary to go into the details of the questions connected with famine relief in this section. The point which it is intended to bring out is that owing to the agricultural character of industrial labour in India, the problems connected with employment and unemployment are somewhat closely related to those connected with the success or the failure of the monsoon.

Speaking generally, the Indian labourer migrates to industrial centres when he finds that the yield of the land in his native place is not sufficient to maintain all the members of his family. A certain percentage of the workers employed in industry temporarily give up their employment during the sowing, transplanting and harvesting seasons. During periods of depression in trade and industry industrial workers released from employment fall back upon agriculture and thus add to the existing pressure of the population on the land. If the depression in trade and industry synchronises with the failure of the monsoon, the amount of unemployment becomes considerable and the resulting distress is enormous. Various States have devised schemes of Employment Exchanges for the purpose of studying the problems in connexion with the demand and supply of labour to control the movements of labour and to place it where it is required. The Government of India and the various Provincial Governments have considered the question of creating Employment Exchanges in India several times during the last ten years, but opinion is unanimous that owing to the preponderantly agricultural character of

Indian labour it is practically impossible to devise any satisfactory scheme for the formation of Employment Exchanges.

India is a State Member of the International Labour Conference, and as such she is bound according to the terms of the Treaty of Peace, to ratify and adopt, wherever possible, any Convention or Recommendation adopted by the International Labour Conference. The consideration of industrial unemployment was thrust upon the Government of India by the Washington Convention, which was adopted by the First International Labour Conference held in Washington in 1919. Each Member ratifying this Convention was required—

(i) to communicate to the International Labour Office all information, statistical or otherwise concerning unemployment, including reports on measures taken or contemplated to combat unemployment,

(ii) to establish a system of free public employment agencies under the control of the central authority, and to appoint Committees including representatives of employers and workers, to advise on matters concerning the operation of these agencies,

(iii) where systems of insurance against unemployment have been established, to make arrangements upon terms to be agreed upon between the members concerned, whereby workers belonging to one Member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those of the latter.

In addition to this Convention, the First International Labour Conference also adopted a Recommendation which advocated—

(a) the abolition of employment agencies which charge fees or which carry on their business for profit,

(b) the establishment of an effective system of unemployment insurance, and

(c) the creation of public works as far as practicable during periods of unemployment and in districts most affected by it.

The draft Convention was ratified by India but, in communicating this ratification to the International Labour Organisation at Geneva, the Secretary of State for India found it necessary in order to avoid subsequent misunderstanding to explain at some length the peculiar position of India in this matter and to emphasise the difficulties connected with a complete ratification by India owing to the predominantly agricultural character of the country. The Government of India, in addressing the local Governments on the question arising out of the draft Convention and Recommendation adopted by the International Labour Conference, invited views on the following points—

(i) Advisability of creating Public Employment Agencies in congested areas to facilitate

the migration of surplus labour to industrial areas where there is a shortage of labour

(15) Advisability of utilising Public Employment Agencies in connexion with recruitment for Assam

(16) Advisability of establishing Public Employment Agencies for the dissemination of information regarding employment during times of famine and scarcity to those in search of employment

(17) Advisability of appointing Committees representing employers and workers to advise on matters concerning the operation of Public Employment Agencies

(18) Advisability of abolishing or controlling Employment Agencies which charge fees or which carry on their business for profit

The replies of the local Governments indicated that in most provinces the demand for labour exceeded the supply that even in provinces from which there was a large migration of labour, no difficulty had been experienced in obtaining information with regard to the areas where labour was in demand that the establishment of public employment agencies would serve no useful purpose, and that such agencies might excite suspicion and be liable to be misunderstood by the people. With regard to the recruitment of labour for Assam the local governments concerned were agreed that any experiment on the lines suggested would be risky. On the question of the abolition of control of employment agencies which charge fees or which carry on their business for profit, the replies of the local Governments indicated that employment agencies of this character were practically unknown in India. In the circumstances, the Government of India decided to take no further action on the draft Convention or Recommendation concerning unemployment

Middle-class unemployment.—In recent years unemployment among the educated middle classes has been assuming alarming proportions and has attracted widespread public attention. In January 1926, a Resolution was passed by the Legislative Assembly in the following terms —

"This Assembly recommends to the Governor General in Council that he may be pleased to appoint a Committee with a non-official majority to investigate into the problem of unemployment in general, and among the educated classes in particular, and devise suitable remedies whether by a system of industrial and technical education, or by a revision of the existing system of education, or by offering encouragement to the starting of new industries, or by opening new avenues of employment or by the establishment of employment bureaux, or by all these or any other means, and that the said Committee do make a report on the latter problem as early as possible

Similar Resolutions were also passed in some of the local Legislative Councils. The Government of India did not consider that the appointment of a Central Committee would serve any useful purpose, but in a circular letter drew the attention of the local Governments to the gravity of the problem of middle-class unemployment in India. As a result of the Resolutions passed by the local Councils Committees were appointed by some of the local Governments. The reports of most of these Committees refer almost exclusively to middle class unemployment, but the Punjab and the Bengal Committees also dealt with general unemployment. The Punjab Committee came to the conclusion that there was no unemployment worthy of mention among the uneducated classes, whilst the Bengal Committee observed as follows —

The labourer, if we may use the term, has not yet been divorced completely from the land and he frequently possesses or has an interest in a small plot of land in his native place on the cultivation of which he can fall back in times of depression. Added to this is the fact that industrial labour is still comparatively scarce in Bengal and in fact had to be imported from other provinces. The effect therefore of trade depressions on the industrial labourer in Bengal is so far very small.

Jute and Cotton Mill Industries.—In the jute mill industry in Bengal a large number of mills have, during the last two or three years changed over from the multiple to the single shift system. It is estimated that on the single shift about 25 to 33 per cent less labour force is required than on the multiple shift, but in spite of the changes no trouble has been reported with regard to unemployment. In the Bombay cotton mill industry, out of about 140 000 workers employed approximately 10 000 have been thrown out of employment on account of the introduction of efficiency methods of work whereby spinners are required to mind two sides of a spinning frame instead of one and where the ordinary two loom weaver is required to tend three looms. The Bombay Strike Enquiry Committee dealt with this aspect of the question in their report and they recommended the creation of an Out-of-Work Donation Fund. This has been dealt with in the summary given with regard to the findings of this Committee in the Section on Conciliation and Arbitration. Owing to depression in trade several cotton mills were being compelled either to close down completely or to work with partial complements. Owing to the Boycott movement however, since October 1920 the cotton industry is again showing signs of considerable improvement and many of the mills which had closed down during the year have again started working with full complements. Not only are the mills working with full complements but many are working a night shift. At the beginning of December 1922 there were 24 mills in Bombay City working night shift and employing an aggregate of 13 430 hands. In Ahmedabad 18 Mills worked double shift with a total additional labour force of 6,708.

INDUSTRIAL SAFETY AND INSPECTION.

As in other countries the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. Statistics for 1931.—The numbers of acci-

dents classified according to fatal, serious and minor in factories in each of the British Provinces in India in the year 1931 are shown in the following table—

Province	Fatal	Serious	Minor	Total
Madras	14	400	1 594	1,948
Bombay	26	1 282	4 001	5 108
Bengal	36	972	2 305	3 313
United Provinces	11	280	1 283	1 688
Punjab	12	10	1 091	1,142
Burma	19	241	1 468	1 728
Bihar and Orissa	13	34	1 020	2 007
Central Provinces and Berar	22	48	240	308
Assam	3	58	336	403
North West Frontier Province			1	1
Baluchistan			36	36
Ajmer Merwara	1	6	717	724
Delhi	1	7	84	92
Bangalore and Coorg			224	224
Total	174	3 797	15,940	19 807
Total for the year 1930	240	4 115	17,129	21 784

The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for work people and employers to report accidents more frequently than in the past. But the increase in the number of serious accidents suggests that the problem is a serious one and that an organised "safety first" campaign is very desirable in India. Some progress along these lines has been made in Bombay in the mills and on the railways.

Factory Inspection.—The administration of the Indian Factories Act is entrusted to Factory Inspectors in each province. Where breaches of the Act are discovered the managers of factories are prosecuted and in most cases such prosecutions result in convictions. All provinces except Assam have Factories Departments. In the Bombay Presidency the full time factory staff consists of the Chief Inspector of Factories, three Inspectors, three Assistant Inspectors and one Woman Inspector. The Chief Inspector, two Inspectors and two

Assistant Inspectors have their headquarters in Bombay City. An Inspector and an Assistant are stationed in Ahmedabad. The Woman Inspector has her headquarters in Bombay but has jurisdiction over the whole Presidency. She deals with problems mainly affecting women. The Bombay Presidency is the only province in India which has a Lady Inspector of Factories. Full time Certifying Surgeons are stationed in Bombay and Ahmedabad. They have been appointed as Divisional Inspectors with powers under the Health and Sanitary sections of the Factories Act. They have also been granted powers under the provisions of the Bombay Maternity Benefit Act. The Director and Assistant Directors of Public Health have also been appointed as Divisional Inspectors under the Health and Sanitary sections of the Act. Their reports are sent to the Chief Inspector who passes orders on the same. Local Magistrates in the districts have ex-officio powers under the Employment sections of the Act.

Reporting of accidents.—Section 84 of the Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely fatal, serious & accidents which prevent a person returning to work for 21 days or more, and minor, are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the Police Station. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the cause of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Local Government, even though no injury may have resulted therefrom to any person. So far notifications have been issued under this section only in Bombay, Bengal and Burma.

Accident Prevention.—The chief influences in the prevention of accidents are (a) the powers of Inspectors under the Factories Act to compel managers to erect adequate fencing and to take precautions against accidents (b) the voluntary interest of managers in safety measures and safety precautions and (c) the interest of insurance companies as a result of the operation of the Workmen's Compensation Act. In many provinces the existing rules made under the Factories Act cover "Safety-First" measures such as compelling certain classes of workers to wear tightly fitting clothes, to prohibit children from entering into certain parts of factories etc but no serious attempt has been made in the shape of a "Safety-First" campaign except in the case of a few solitary instances. In some provinces the first three resolutions adopted by the eleventh session of the International Labour Conference have been communicated to all industrial concerns. In the Bombay Presidency the Millowners Mutual Insurance Association have recognised the value of safety posters as an aid in the reduction of accidents and have undertaken the preparation of some posters for the textile industry. The posters illustrate the danger of carding machines at the front plate either during or after the spinning process, danger at the underside of the looms in danger of wearing unsuitable clothing and the danger from careless sweeping under ring frames.

The railways are of course pioneers in the introduction and the continuance of active propaganda in "Safety-First" work in all departments. These activities cover railway workshops (which come under the Indian Factories Act) as well. Progress in safety propaganda has been commented on with satisfaction in all the Provincial Reports on the administration of the Indian Factories Act during the year 1931. The Government of Madras took action to minimise the risk of accidents

caused by falling weights and flying splinters in workshops, and at the Perambur works and the Golden Rock factory safety committees have been established for the purpose of investigating the cause of each accident and suggesting preventive measures, safety posters have been in use for a couple of years in the Carding Departments of the Bombay Cotton Mills and a reduction of 50 per cent in serious accidents from carding machines was reported from Ahmedabad. In furtherance of the safety first movement in Bengal warning hooters or sirens have been installed in the textile factories so as to warn employers before the power plant and machinery is set in motion. An agreement in regard to standard guards and safety devices for jute machinery has been signed by the Indian Jute Mills Association in regard to new machinery to be installed after July 1932. Posters supplied by the Indian Red Cross Society illustrating the suitable type of dress to be worn by operatives while working on transmission machinery were distributed to factories in the different provinces and safety propaganda of various kinds is receiving increasing attention from the large factory owners and the inspecting staff. Perhaps the best known instance where first class safety first work is being carried on in India is that done by the Tata Iron and Steel Company at Jamshedpur. The Company has since 1920 subscribed to the British Industrial Safety First Association and has installed notice boards all over the plant exhibiting the posters supplied by that Association. The literature received from the Association is periodically broadcast throughout the world.

First-Aid and Medical Relief.—Some of the Local Governments have framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first-aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing 500 and more operatives. Most of the factories are situated within easy reach of Government hospitals or hospitals maintained by Local Authorities but many of the larger and enlightened employers are already maintaining their own medical staff and equipment which are easily available in cases of accidents. In the Tata Iron and Steel Works at Jamshedpur boxes with first aid supplies are maintained in each department and two first-aid hospitals in different parts of the plant are staffed with doctors and compounders in readiness to render first-aid to injured persons.

Mines.—The Indian Mines Act of 1923 empowers the Governor-General in Council to frame regulations for the safety of persons employed in mines (Section 22 clauses (1) to (5)). Local Governments are also empowered to frame rules under the Act to ensure the proper fencing of a mine for the protection of the public. In addition, the Chief Inspector of Mines may call upon the owner agent or manager of a mine to frame bye-laws which are not inconsistent with the provisions of the Act, regulations or rules to prevent accidents and to provide for the safety, convenience and discipline of the persons employed in the mine (Section 32). The bye-laws, when approved

by the Local Government, have effect as enacted under the Act. Further Section 19 of the Act gives special powers to the Inspector of Mines to take action when any danger is apprehended which is not expressly provided for by the Act, regulations, rules and the bye laws. The Governor General in Council has framed two sets of regulations, namely, the Indian Coal Mines Regulations 1926 which apply only to coal mines and the Indian Metalliferous Mines Regulations 1926 which apply to all other mines. These regulations provide for the proper maintenance of shafts and outside roads and working places, haulage arrangements, fending and gates for the restrictions which have to be observed in raising or lowering persons or materials for the precautions to be taken in the use of explosives and for adequate ventilation and lighting.

During the year 1931 at Mines regulated by the Indian Mines Act 1923 there were 189 fatal accidents which is 28 less than in 1930 and 22 less than the average number in the preceding five years. In addition to the fatal accidents there were 591 serious accidents involving injuries to 613 persons as compared with 745 serious accidents involving injuries to 769 persons in the previous year. No record is maintained of minor accidents. 237 persons were killed and 642 persons were seriously injured. The latter figure includes 28 persons injured in fatal accidents. The number of persons killed is 30 less than in 1930. 183 of the persons killed were men and 44 were women. In one case thirteen lives in two cases five lives in one case four lives in one case three lives and in thirteen cases two lives were lost. The causes of the fatal accidents have been classified as follows:

	Number of fatal accidents	Percentage of total number of fatal accidents
Misadventure	137	79.49
Fault of deceased	28	14.82
Fault of fellow workmen	6	3.17
Fault of subordinate officials	10	5.29
Fault of Management	6	3.17
Faulty Material	2	1.06
Total	189	100.00

Deaths occurring in each class of mines were as follows:—185 in coal mines 3 in mica mines, 5 in silver lead mines 20 in tin and wolfram mines 1 in limestone mines 4 in stone mines 3 in a copper mine 2 in salt mines and one each in a chromite mine and in a barytes mine. Sixty-five persons lost their lives by falls of roof 81 by falls of side 8 in shafts, 22 by explosives 2 by eruption of water 32 by haulage 14 by other accidents underground and 23 on the surface.

Railways—The Railway Department conducts an intensive Safety First propaganda every year which embraces the following among other activities—

- (1) Safety posters and safeguards are put up on prominent points both in English and in the vernacular. Some of these are on the Bombay, Baroda and Central India Railway, are prepared from actual photographs of safe and unsafe methods of working in selected branches of manufacture and maintenance work in the railway workshops.
- (2) An illustrated booklet was compiled by the Great Indian Peninsula Railway during the year 1930-37 which has been translated into a number of vernacular languages and distributed throughout the line on certain railways.
- (3) Photographs and special articles are published in the Railway magazines for the instruction of the staff.
- (4) Inspecting subordinates are instructed to take the opportunity while visiting stations of addressing the staff on Safety First.
- (5) Coloured pictures showing the right and wrong way of doing a job are posted at various places for the benefit of the illiterate staff.
- (6) A Safety First film was prepared by the Central Publicity Bureau during the year 1927-28 and copies distributed to railways. The film is played weekly by the travelling cinemas of the railways.
- (7) A Safety First pamphlet has been prepared by the Central Publicity Bureau and is being issued to all railway administrations.

WORKMEN'S COMPENSATION

The Workmen's Compensation Act of 1923 came into force on July 1st 1924. The Act as passed by the Legislature covers ten classes of workmen. Some of these, such as members of fire brigades, telegraph and telephone linemen, sewage workers and tramway men are small and as the definition of seamen is limited to those employed on certain inland vessels only a very small proportion of Indian seamen come under the Act. Compensation for seamen, however, has been secured by agreement between the Government of India and their foreign steamship companies, under which the latter agree to the insertion in the ships' articles of a clause whereby the companies agree to pay compensation to injured Indian seamen on the same basis as if they were covered by the Act and all questions as to compensation are decided by Commissioners of Workmen's Compensation in India. An Indian seaman employed on a British ship legally comes under the English Act and the insertion of the clause referred to above does away with the practical difficulties which would arise if Indian seamen had to claim compensation in the English or other foreign courts. The five important classes covered are workers in factories, mines, docks and on railways, practically all of whom are included and those engaged in certain types of building work notably the construction of industrial and commercial buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than Rs 300 a month are excluded, except on the railways. Power is taken to include other hazardous occupations by notification from time to time. All occupations involving blasting operations were thus declared by the Governor-General in Council as hazardous occupations. Compensation is to be given as in the English Act, for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workmen contracts a scheduled disease it will usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally difficult to get compensation for diseases, as they will have to prove that the disease arises solely and directly from employment. The diseases scheduled at present are anthrax, lead poisoning and phosphorus poisoning. Whether compensation can be claimed for diseases other than those scheduled is doubtful, but the list is made capable of extension. Mercury poisoning was thus added to Schedule III by notification, dated 28th September 1926.

In order to bring the Indian law into conformity with the provisions of the Draft Convention concerning Workmen's Compensation for occupational diseases adopted at the Seventh International Labour Conference held at Geneva

in 1926, which has been ratified by India, necessary changes were made in sub-section (2) of section 2 and in the list of occupational diseases given in Schedule III of the Act. Certain occupations in connexion with operations for winning natural petroleum or natural gas and in connexion with the loading, unloading and fuelling of a ship in a harbour, roadstead or navigable water were also brought within the purview of the Act by notification issued by the Governor-General in Council in exercise of the powers conferred by sub-section (3) of section 2 of the Act.

The Amending Act of 1928—With a view to revise the Act so as to amend those Sections or parts of Sections which were admittedly defective and to introduce changes which were likely to raise no important controversial questions and which would be generally recognised as improvements the Government of India introduced into the Legislative Assembly on 21st September 1928 a Bill further to amend the Workmen's Compensation Act, 1923. The main features of this Amending Act were (1) that the discriminating restrictions placed on workmen employed in the construction, repair or demolition of a building or bridge, with regard to their ineligibility for compensation except in the case of death or permanent total disablement has been removed; (2) that all payments to dependants of the deceased workmen (except advances to the extent of Rs. 50 for funeral expenses of the deceased workman and to the extent of a hundred rupees on account of compensation to any dependent) and any lump sums payable to minors should be paid through the Commissioner; (3) deposits of trivial amounts i.e. less than Rs 10 have been done away with; (4) provision is made for the protection of lump sums payable to a woman or a person under legal disability by empowering the Commissioner to invest, apply or otherwise deal with them for the benefit of the woman, or of such person during his disability; (5) powers are vested in the Commissioner to recover any amount obtained by any person by fraud, impersonation or other improper means and (6) the benefits of the Act are extended to (a) any person employed for the purpose of loading, unloading, fuelling, constructing, repairing, demolishing, cleaning or painting any ship of which he is not the master or a member of the crew or (b) employed on a railway as defined in Sections 3 (4) and 145 (1) of the Indian Railways Act, 1890 by a person fulfilling a contract with a railway administration or (c) employed as an inspector, mail guard, sorter or van poon in the Railway Mail Service or (d) employed in connexion with operations for winning natural petroleum or natural gas as a rig builder, driller, driller's helper, oil well puller or bailing or cleaning oil wells or putting in and taking out casings or drill pipes in oil wells or (e) employed in any occupation involving blasting operations.

In February 1931 the Act was further extended to cover workmen engaged in the construction etc. of aerial ropeways.

Proposed changes in the Law on the Recommendations of the Royal Commission.—The Royal Commission on Indian Labour made a number of recommendations for expanding the scope of the Workmen's Compensation Act 1931 and on effecting improvements in it. The Government of India in the Department of Industries and Labour introduced a Bill in the Legislative Assembly on the 22nd February, 1932 giving effect to the Commission's recommendations. The Bill follows these recommendations closely, some minor additional provisions have been incorporated but few variations have been made from the Commission's proposals. The principal amendments proposed are as follows:—

(a) The addition of widowed daughters and widowed sisters to the list of dependents.

(b) The existing Act applies only to those seamen who are employed on certain registered Sea-going or Home-trade ships of a registered tonnage of not less than 300 tons. It is proposed to reduce the tonnage limit in their case to 50 tons to remove the tonnage limit in the case of inland steam vessels and to extend the scope of the Act to all inland vessels whether propelled by steam or other mechanical power or by electricity.

(c) The extension of the scope of the Act— which at present covers persons in branches of industry which are both organised and hazardous— to cover as completely as possible the workers in organised industry whether their occupations are hazardous or not and a gradual expansion to workers in less organised industries beginning with those which are subject to much risk. New classes of workers to be included cover workmen employed in the making of excavations in the operation of ferry boats carrying more than ten persons on chainsaws, coffee, rubber and tea plantations, employing fifty or more workmen, in plants for the generation, supply and transformation of electrical energy and in lighthouses as defined in section 2 of the Indian Light House Act 1927. Several of the existing categories are also proposed to be enlarged. It is further proposed to extend the scope of the Act to all workmen employed in any capacity specified in Schedule II of the Act who are in receipt of monthly wages not exceeding Rs. 300. The scope of the present Act is restricted to those who are employed either by way of manual labour or on monthly wages not exceeding Rs. 300. As there appear to be no manual labourers in receipt of over Rs. 300 a month, it is proposed to delete the reference to manual labour from section 2 (i) (a) (vi) of the Act.

(d) The reduction of the waiting period from ten days to seven.

(e) The considerable enhancement of compensation payable for death and permanent disablement in the case of the more poorly paid workmen (i.e. those getting less than Rs. 17 8-0) and those in receipt of high wages

(i.e. those getting more than Rs. 80 a month), and a substantial enhancement in the compensation for temporary disablement for most workmen. The enhanced scales are indicated in Schedule IV of clause 25 of the Bill. In place of the existing fourteen wage classes seventeen have been substituted. Except in the last two classes compensation is based on the highest wage of the class and not as at present, the mean wage for the last two classes compensation is based on wages of Rs. 12½ and Rs. 150 respectively. In determining the amount of compensation payable the existing basis of calculation of compensation for death at thirty months' wages and for permanent total disablement at 42 months' wages in the case of adults and at 34 months' wages in the case of minors has been retained. The minimum compensation has been fixed in the case of adults at death at Rs. 600 and for permanent total disablement at Rs. 500 and Rs. 500 and Rs. 750 to Rs. 4,500 and Rs. 6,300 respectively. In cases of temporary disablement, in addition to paying the maximum half monthly payment from Rs. 15 to Rs. 30 the air compensation has been increased in the case of adults whose monthly wages do not exceed Rs. 80 to two-thirds of the monthly wages and in the case of minors to full wages.

(f) The insertion into the Act of provisions enabling the interests of dependents in cases of fatal accidents to be better safeguarded by ensuring (1) that in as many cases as possible fatal accidents are brought to the notice of Commissioners,

(ii) That where the employer admits liability compensation is deposited promptly and (iii) that where the employer disclaims liability and there are good grounds for believing compensation to be payable the dependents get the information necessary to enable them to judge if they should make a claim or not.

(g) The prevention of funeral expenses being deducted from the compensation before it is deducted and to provide instead that, on the deposit of the compensation the Commissioner should deduct the actual cost of the workman's funeral expenses up to Rs. 25 and pay them to the person who has incurred them.

(h) The addition of four new diseases in Schedule III of the Act arising from poisoning by gunny processes involving the handling of mercury or its sesquioxide and hexamene and its homologues and chrome ulceration and compound air illness and their sequelae.

Provisions have also been made in the Bill for more convenient distribution of compensation for the grant of powers to Commissioners to call on employers to make up inadequate deposits to the proper amounts for dependents to approach the Commissioner in the first instance instead of the employer for the imposition of fines for failure to submit returns for the appointment of more than one Commissioner in specified areas, etc. The Bill was circulated for opinion to Local Governments in March 1932 and was referred to a Select Committee of the Legislative Assembly on the 23rd Sept. 1932. The Select Committee submitted its report in February 1933.

Statistics—The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the Act came into force. These statistics relate to the more important classes of workers, i.e., workers in factories, mines and docks and on railways and tramways. The total amount of compensation paid to these classes of workers was about 6½ lakhs of rupees in 1925, 5½ lakhs in 1926 and 11 lakhs each in 1927 and 1928 and 12½ lakhs in 1929 and 1930. The following table shows the number of cases classified by nature of injuries and the amounts of compensation paid in each year since 1924—

Year	Number of Cases			Amount of Compensation paid for		
	Fatal	Non Fatal	Total	Fatal Cases	Non Fatal Cases	All Cases
1924*—				Rs	Rs	Rs
Adults	249	3,808	4,147	32,085	66,248	1,48,933
Minors	2	19	21	375	1,516	1,891
1925—						
Adults	583	10,751	11,334	3,45,995	2,95,535	6,41,530
Minors	7	30	37	200	2,391	2,591
1926—						
Adults	631	13,387	14,018	4,25,935	3,94,885	8,20,320
Minors	3	45	48	460	695	1,155
1927—						
Adults	77	14,307	15,174	5,61,400	5,27,984	11,09,884
Minors	6	36	42	840	1,050	1,870
1928—						
Adults	819	15,898	16,717	5,21,10	5,69,741	10,91,261
Minors	9	42	51	2,494	1,985	4,479
1929—						
Adults	866	17,942	18,808	5,57,190	6,70,574	12,57,763
Minors	2	34	36	200	2,201	2,401
1930—						
Adults	867	22,606	23,525	6,50,302	7,85,710	12,45,052
Minors	4	47	51	1,100	612	1,712

* The figures for 1924 relate to only the six months from 1st July to 31st December

The following tables set out the proportion of contested cases out of the total number of applications received by the Commissioners in each year—

Year	No of Applications disposed of	Number of contested Cases	Percentage of contested cases to total disposed of
1924	92	14	15.2
1925	539	100	18.6
1926	575	198	23.7
1927	1,223	281	22.9
1928	1,306	309	23.7
1929	1,485	278	20.7
1930	1,438	301	21.15

The details of agreements (i) disposed of (ii) registered as filed and (iii) rejected on account of inadequacy are given below for each year—

Year	Number of Agreements			
	Disposed of	Registered as filed	Registered after modification	Not registered on account of inadequacy etc
1924	41	33	1	7
1925	390	390	3	6
1926	591	653	5	3
1927	701	722	12	7
1928	827	855	25	7
1929	1,046	1,024	14	8
1930	1,007	950	29	28

Effect on Industry—A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than *annas* four per ton of coal (*vide* para 39 of the Report of the Indian Coal Committee, 1935). However, the owners of many of the small coal mines have been compelled to close down their mines due mainly to the severe depression with which the industry has been faced. In the Punjab the proprietors of the coal mines in the Jhelum District are reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them

have had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta, and Madras. In these provinces and in Bombay insurance is widely resorted to by the employers (especially in the Textile Industry) but in the other Provinces accident insurance does not appear to have made much progress.

INDUSTRIAL HOUSING

One of the most vital problems facing industrial employers in India to-day is that connected with the housing of the labour which they employ. The importance and the urgency of providing decent housing cannot be sufficiently emphasized.

The conditions of industrial housing in India are in many cases appalling and the majority of buildings tenements or huts in which industrial labourers are housed are insanitary and more or less uninhabitable from Western points of view. Provincial Governments, Municipalities Improvement Trusts and the larger employers have done a great deal to mitigate the evils resulting from an insufficiency of decent sanitary housing for labour but a considerable amount still remains to be done before this question can be considered to have been satisfactorily solved.

Several commissions and committees of inquiry appointed by the Government of India and the Provincial Governments in connection with various subjects have dealt with the question of industrial housing. The Industrial Commission in 1918 urged that, in addition to the scheme followed by the Improvement Trust in Bombay other measures should be adopted such as the refusal of permission with a few exceptions to fresh industrial concerns to be established the setting up of a special area for industrial development, the removal of the existing railway workshops from the city, supply of housing accommodation to the employees by railways Government departments and public bodies improved communications with a view to creating industrial suburbs, and a definite programme of construction to be taken up by local authorities. The findings of other commissions and committees with regard to this question follow similar lines.

Labour Commission's Recommendations—The Royal Commission on Indian Labour have made several recommendations in connection with industrial housing. These recommendations fall under various categories: (1) Legislative Action by the Central Government (2) Administrative Action by the Central Government (3) Legislative Action by Provincial Governments (4) Administrative Action by Provincial Governments (5) Administrative

Action by public bodies such as the Municipalities Improvement Trusts etc. and (6) Action by Employers and Workers organisations. The recommendations under the first head include a suggestion to amend the Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers' dwellings. The Government of India have introduced a Bill in the Legislative Assembly to amend the Land Acquisition Act in the manner suggested and details of this Bill have been given above in the chapter on The Royal Commission on Indian Labour. The Commission's recommendations under the second head mostly concern Railways and although the Railway Board agrees on the vital urgency of providing greater facilities for adequate housing it has come to the conclusion that no material advance can be made in this direction at present owing to financial stringency.

The Commission's recommendations with regard to legislative action by Provinces are of a very ambitious character. They include Town Planning Act for the Bombay and the Bengal Presidencies providing for the acquisition and lay out of suitable areas for working class housing the opening up and reconstruction of congested and insanitary areas the Zoning of industrial and urban areas and Government grants and loans to approved schemes. For administrative action by Local Governments, the Commission recommend that they should make surveys of urban and industrial areas to ascertain their needs in regard to housing, and that they should then arrange for Conferences with all interested parties in order that decisions may be taken as to practicable schemes and the methods wherein their cost should be shared. Where suitable Government land is available Government should be prepared to sell or lease to those who agree to build houses within at specified period and Government should announce their willingness to subsidise in this or other ways employees' housing schemes approved by them. The Commission further recommend that Government should insist that all local authorities should frame bye-laws laying down minimum standards in regard to floor and cubic space ventilation and lighting and that the Governments themselves should draw up regulations for water supplies drainage schemes and standards for latrines. For action

by Public Bodies, the Commission recommend that the provision of working-class housing should be a statutory obligation on every Improvement Trust and that it should be possible for Improvement Trusts to provide land roads sewers and sanitary conveniences for new areas but that street lighting and water mains should be a charge on Municipalities. Improvement Trusts should be placed in a position to recoup themselves from the enhancement of land values resulting from their activities. It has also been suggested that co-operative building societies and similar activities should be encouraged. In view however of the present acute financial stringency prevailing in all Provinces, except in the Madras Presidency, it is very doubtful whether most of the Provincial Governments will be in a position to do much in the matter of Industrial Housing Action already taken.

Bombay Presidency—The first attempt to improve housing conditions in Bombay City was made after the plague of 1896 when the heavy mortality and the great exodus that followed paralysed the trade and industry of Bombay. The Bombay Improvement Trust was established in 1898 "for the work of making new streets opening out crowded localities, reclaiming lands from the sea to provide room for the expansion of the city and constructing sanitary dwellings for the poor and the police. Owing to its limited powers and the various difficulties which it encountered the Trust had to content itself for the first few years of its existence with "alum patching" the development of a few building sites the construction of a few chawls and the development of main roads. In more recent years, however the Trust has been able to do considerable good work in the direction of industrial housing and has built over 1,300 tenements for housing its own labour and 99 chawls containing 8,896 tenements in all for housing labour in general. The Bombay Port Trust which engages on an average about 8,500 manual workers in all its departments has provided accommodation for a little over 3,000 of its workers. The Bombay Municipality has provided a large number of chawls for its employees as will be evidenced by the fact that nearly 75 per cent of the seven and a half thousand scavengers employed are provided with quarters. Varying proportions of the numbers of employees in the other departments of the Municipality are also provided with adequate housing. According to the information collected by the Bombay Labour Office in 1925, 28 out of the 76 textile mills in Bombay City which furnished information for the enquiry had provided housing for their operatives. 7 out of these mills provided residential accommodation only for employees in the Watch and Ward Department and the rooms provided were given free of rent. In the 22 mills which provide partial housing for all classes of operatives, the number of workers who lived in the tenements provided amounted to 12,149 out of 54,720 employed. The G. I. P. Railway owns 20 chawls containing 841 one-room tenements and the B. B. & C. I. Railway owns more than 300 one-room tenements for housing their employees.

No action was taken by the Local Government in Bombay City for housing general

industrial labour till after the end of the war. A broad and comprehensive policy was drawn up just after the end of the war by the Government of Bombay under the personal inspiration of Lord Lloyd, then Governor of Bombay for dealing with the problem. A Development Directorate was formed in 1920 to co-ordinate the various housing activities of Government, the Municipality, the Improvement Trust and the larger labour employing organisations. The original intention of the Directorate was to construct 625 chawls located in 8 industrial centres and to comprise of 50,000 tenements for working classes, within a period of 9 years from 1921 to 1929. The original estimated cost was 5½ crores of rupees and a "town duty" of a rupee per bale of cotton on all cotton entering Bombay was imposed under the City of Bombay Municipal and Improvement Act of 1920. The scheme was launched at a time when the industrial prosperity of the country was at its zenith and labour conditions in the City were abnormal. By the end of 1927, 207 chawls with 15,524 tenements were constructed but only 183 chawls with 8,234 rooms were occupied. These chawls did not attract industrial labour in Bombay to live in them, the reasons attributed to the failure being the distance of the chawls from the mills, the absence of travelling facilities and other amenities of city life. The average economic rent per tenement worked out at Rs. 14 per month but the actual rents charged were fixed, on an average at barely 50 per cent of the economic rent and accommodation can now be had in the chawls at Worli at Rs. 5 per room on all floors, except for corner rooms for which an extra rupee is charged. The rents in the Malgaum and Sewli chawls are Rs. 7 per room on all floors and for those in the chawls at DeLisle Road Rs. 8 per room per month on all floors. One rupee extra is charged for rooms. The rents charged prior to 1st April 1929 were however, higher for all centres. Frequent strikes in the cotton textile mills and general industrial unrest in Bombay City have been largely responsible for the non-occupation of the rooms in the chawls of the Development Department during the last two years and the figure for the number of tenements occupied on the 31st March 1932 was only 8,890 out of 16,524 rooms available.

Ahmedabad City—Probably in no other industrial centre in India is the condition of the housing of the working classes so bad as it is in Ahmedabad. The Textile Labour Union at Ahmedabad published a pamphlet entitled "A plea for Municipal Housing for the Working Classes" in the City for the first time a couple of years ago for submission to the Ahmedabad Municipality. In this pamphlet the Union deals with 23,706 tenements observed and studied by it. The Union reports that there is absolutely no provision of water in the case of 5,696 tenements, 3,117 tenements have a supply of some sort from wells. Even those which are supposed to possess the advantage of Municipal water have a hopelessly inadequate arrangement in this respect—a tap or two in a compound for a group of 200 or more families. Bathing and washing accommodation has not been thought of except in one or two chawls erected by mills

5,360 tenements have no latrine accommodation. In most of the remaining tenements the Union reports that the arrangements are miserable in quality and grossly insufficient in quantity and that latrines are conspicuous by their absence. Only 100 tenements are provided with any sort of drainage. No other drainage arrangement exists.

The evils of bad housing in Ahmedabad were considerably aggravated as a result of the flood of July 1927 in Gujarat which destroyed over seven thousand houses in the City of Ahmedabad. The bulk of these houses belonged to the working classes. The Union in the pamphlet referred to reports that the situation which had arisen in consequence of the flood was grave beyond words. Of the thousands who had been unhoused many came to share with their relatives and friends the accommodation that was already heavily overcrowded. Hundreds were altogether without shelter. The relief operations that were then carried out included the construction of huts intended to provide temporary accommodation to a number of those who could make no arrangement of their own. The Relief Committee set up by the leading citizens of Ahmedabad for reconstruction work recommended that the Municipality should take as early steps as possible to construct 5,000 sanitary tenements by raising a loan for the purpose.

In the opinion of the Labour Union the solution of the question of housing constitutes one of the obligatory duties of the Municipality and a growing appreciation of this aspect of the housing question on the part of the authorities has led to the incorporation in the City Municipalities Act (1925) under section 71 of a provision permitting City Municipalities to undertake provision of sanitary dwellings for the poorer classes. Owing mainly to the efforts of Mr. J. Nanda, Secretary of the Ahmedabad Labour Union the Ahmedabad Municipality has recently decided to construct model dwellings for the working classes.

A Census taken by the Bombay Labour office in the early part of 1931 showed that of 69 mills working in Ahmedabad, 84 provided housing accommodation for about 18 per cent. of their employees, the total number of tenements being 3,708 of which 3,637 are one roomed mostly 144 square yards in area with a cubic space of 1,592 cubic feet the average rent of which was Rs 3-3 per month.

Bengal Presidency—Housing is generally provided in Bengal by employers but the extent and quality of the housing depend on the cheapness and availability of land. In the more congested areas in Calcutta, Howrah and the nearer neighbourhood housing facilities are not provided on so big or so good a scale as in other areas. Most jute mills provide for their workers rooms constructed in the neighbourhood of the mills at rents varying from annas 6 to Re 1 per room per month. The sizes of the rooms vary from 8'x8 to 10'x10' and in some cases to 12'x10'. In nearly all cases the rooms are constructed back to back and in most pucca floors and tiled roofs have been provided with

narrow verandahs generally 4' wide used for cooking purposes. Very often the rooms are dark and in none of them can sun light penetrate through. Ventilation is unsatisfactory owing to the method of construction and the only openings in the rooms are the doors. If windows are provided they are kept shut. No chimneys or openings are provided for the escape of smoke in the majority of the houses. Recent enquiries made into the condition of housing in Bengal show that drainage water supply and conservancy arrangements in *basti* are abominable. Government and other public agencies do not provide housing, as in Bombay for industrial purposes but some Government and public concerns do provide quarters for their own employees.

Madras Presidency—As a result of the exertions of the Labour Department of the Government of Madras and the Co-operative Building Societies and a number of local authorities some houses have been built for poor workmen in Madras City. Out of 1,530 registered factories 211 factories are reported to have provided housing for a small number of their employees. Almost all plantation estates in the Nilgiris, Malabar and Coimbatore provide lines for the coolie labour employed.

United Provinces—Out of 380 regulated factories 88 make some provision for the housing of workmen and their families. Altogether about 5,400 single room and 1,045 double room tenements are provided by the employers. The McRobertson (Allamganj) and the Juh settlements of the British India Corporation at Cawnpore are about the only important examples of housing provided by employers for their workmen in that city. A scheme has however been launched by some of the owners of factories in Cawnpore for providing housing for some twenty thousand workmen and their families but it is still under discussion. Except as employers the Government of the United Provinces has done nothing in connection with industrial housing. The Improvement Trust of Cawnpore has put up some temporary housing and the Improvement Trust of Lucknow has put up a model barrack in the area set apart as an industrial area. In the *basti* or *kolasi* where housing is provided by private landlords the type of tenement available is usually a small unit but with a room at the back and a room or a verandah in front. The size and height vary. The usual size is 10'x8'. The normal height is 6 to 8'. The only outlet for ventilation is the small main door. Even such tenements are reported to be shared by 2, 3 or even 4 families and as many as 10 persons may be found as inmates.

Central Provinces—Housing is provided for about 7,500 workmen by some of the larger factories and mills in the Central Provinces. Nineteen per cent. of textile labour and 7.5 per cent. of the labour employed in minor industries is housed. The Pulgaon Cotton Mill maintains a settlement covering an area of 16 acres on which the millhands are allowed to build their own houses on payment of a nominal ground rent of annas 4 per annum per 100 sq ft. Probably the most magnificent scheme of

industrial housing conceived in India is that launched by the Kanyasulk Mills under the agency of Messrs. Tata Steel Limited at Nagpur. These mills have leased a plot of 200 acres at Indora, a suburb of Nagpur two miles from the mills. The scheme is based on a desire to establish a model village. The idea is to build houses of the bungalow type standing on their own ground in plots measuring 30 x 53 with the limitation that building will not be allowed on more than one-third of the space provided. The houses are let to the workers on the hire purchase system and it is expected that many of the workers will ultimately own them.

Bihar and Orissa.—All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses. Their design, construction, ventilation and general amenities are governed by the Jharia Mines Board of Health. Workers recruited from villages within five miles from the mines frequently prefer to live in their own villages and walk backwards and forwards to their work. In five collieries employing about ten thousand workers 4,775 houses are provided, five of the worst equipped mines employing 424 workers provide 156 houses and five normally equipped mines employing 3,084 workers provide 1,162 houses. In many cases more than one employee is accommodated in one *dhowsa* or house. Very frequently a man and his wife and his family all of whom may be recorded as separate labourers in the figures of the mining population occupy one house. Every house must be licensed. Licenses are not given unless the standards are complied with. If labourers are found in occupation of unlicensed premises the management is liable to prosecution. No rent is however charged and subletting is not known.

The Tata Iron and Steel Works at Jamshedpur have built 4,821 residential buildings. Of these, 301 are rented at over Rs. 20 per month. Sixteen are rated as hotels. The accommodation provided at present is insufficient and one of the problems the Company will have to face is the provision of a larger amount of housing.

Assam.—Free quarters are provided for all residential employees on tea estates. Such non-resident labour as is employed is casual labour which comes from the adjoining villages and lives in its own houses. In the mines and oil fields free quarters are provided for the

labour force employed. A Committee of Inquiry appointed in 1921-22 recommended that endeavours should be made to house immigrants from different provinces together in hamlets instead of putting workers from all provinces indiscriminately into barracks or lines. The main objection to this recommendation is the want of land as all available land is under tea. The housing conditions in the coal and oil fields are reported as being quite satisfactory. In Assam the tea estates are regularly inspected by District and Sub Divisional officers. Although the legal powers of interference have been curtailed by the abolition of indentured labour and the repeal of so much of Act VI of 1901 as related to such labour still in practice the inspecting officers do invariably report on the condition of the lines. They call attention to the need of improvement and the management is generally ready to effect such improvements as are considered necessary.

Other Provinces.—No special remarks are necessary in connection with the question of industrial housing in other provinces. Generally speaking no industrial slums as such or any big urban inflammation due to the presence of agglomerations of factory or other workers is particularly noticeable and the housing of labour is not to be differentiated from the ordinary poor classes. Except in those cases where Government action has been definitely indicated the governments of the various other provinces in India have done nothing for the improvement of industrial housing.

Railways.—The general policy on railways is to provide residential quarters where it is necessary for special reasons to provide accommodation for certain classes close to their work and where conditions are such that private enterprise does not adequately meet the demand for housing the staff. The total expenditure incurred on housing provided by the principal railways since the commencement of operations amounts to Rs. 22.41 crores while the expenditure incurred during the last four years exceeds four and a half crores. The programme for the next two years contemplates a further expenditure of Rs. 1.87 crores. Notwithstanding this expenditure there is, at present, a considerable dearth of quarters on most railways. Endeavours are however, continuously made to construct new houses in accordance with an annually pre-arranged programme as funds permit.

HEALTH

No serious attempt has so far been made to keep any satisfactory statistics regarding health conditions of industrial workers, e.g., morbidity rates among the workers, their average weight, height, etc., and in the absence of any statistical information it is not possible to generalise about these matters. Health conditions in the important industrial centres in India cannot however be said to be very satisfactory. This is due to many causes

such as poor diet, overcrowded and insanitary dwellings, want of open air and exercise etc. But the main cause of ill health particularly among the workers in Bombay and Bengal, appears to be the prevalence of malaria in the localities in which they live. Major Covel, the Special Officer appointed by the Government of Bombay to enquire into malarial conditions in Bombay City who submitted his report in 1926, says 'It (Malaria) is still present in

certain quarters of the southern portion of the City to a serious extent, but the most intense malaria at the present time exists in the vicinity of the mills, more especially in Worli and Parel sections. In the northernmost portion of Worli section, malaria is also slight, but as soon as the edge of the mill area is reached the incidence of the disease rises abruptly and extends over the greater part of Worli and Parel. The correlation between the intensity of Malaria and the proximity of mills was most striking especially in certain cases where a single isolated mill happened to be present e.g. the Victoria Mill in Chowpaty and the Colaba Land Mill in Colaba. The vast majority of the mills in Bombay are situated in the highly malarious area.

In the mines in the Madras Presidency Malaria prevails in the Cuddapah district and at every change of season there is a prevalence

of widespread fever. Malaria also prevails in the Thummaragudi mines throughout the year and the cold winds during the rainy season from Sander Hills affect the health of the labourers in the mines of Ponnasigal. Tuberculosis prevails among industrial workers in the United Provinces and Bihar and Orissa, and *Kala Azar* is common among workers in certain tracts like Bihar and Orissa.

The following table gives the birth and death rates and the rate of infant mortality per thousand of the population for some of the important industrial centres. The figures however, relate to the whole population in most cases and as such are not likely to give an adequate idea regarding mortality etc., among industrial workers. Besides, in certain cities like Bombay, it is customary for married working class women to leave the city for their confinement and register births in the infancy!

A table showing (a) Birth-rate and (b) Death-rate per thousand of population and (c) Infant mortality for 1 000 registered births for certain important industrial centres

Centre	Period.	Birth rate per 1 000 of population	Death rate per 1 000 of population	Infant mortality per 1,000 registered births
Bombay	1931	23.4	21.8	272.00
Ahmedabad	1929	47.02	43.90	331.65
Bhopal	"	44.03	31.53	228.73
Karschi	"	51.81	30.97	240.53
Nagpur	"	50.63	52.24	290.77
Amroli	"	59.60	49.14	340.91
Akola	"	41.73	35.36	251.27
Cawnpore	"	36.04	52.70	420.34
Lucknow	"	43.98	7.81	469.22
Allahabad	"	46.31	38.44	256.79

The relation between overcrowding and infant mortality is brought out in the following table extracted from the annual report of the Municipal Commissioner for Bombay City —

Infant Mortality by the Number of Rooms occupied in 1931

Number of rooms	Births		Deaths		Infant mortality per 1 000 births registered	
	Number	Percentage	Number	Percentage	1930	1931
1 Room & under	10,175	37.4	5,382	72.7	502	520
2 Rooms	1,327	4.9	547	7.4	306	412
3 Rooms	669	2.5	249	3.4	270	372
4 or more Rooms	351	1.3	80	1.1	183	225
Hospitals Homeless and not recorded	14 061 1	53.9	1 091 52	14.7 0.7	101	74
Total	27,204	100.0	7,401	100.0	298	272

Working conditions.—The factory department in Bombay has done much work during the year 1931 in investigating the efficiency of different humidifying and ventilating plants in the weaving and spinning department of mills in Ahmedabad. The Bombay Report for 1931 states that past experience in Ahmedabad which is subject to extreme climatic conditions has proved the value both from the humane and the technical side of improving working conditions. There has been an extensive uplift in the older mills and there is hardly a mill that has not made efforts in the direction indicated. There has latterly been a marked tendency to increase the pace of improvements in the spinning departments and one group of mills has installed 12 expensive plants that effectively cool and humidify the atmospheres of the spinning as well as of the weaving departments. A few mills in Bombay City have also installed new cooling and humidifying systems. The Bengal Report refers to the question of dust removal in Jute Mills and Tea factories. Investigations have been made to determine at what stage dust or stuff impregnation could be regarded as definitely injurious, but no progress in the installation of new dust extracting plants has been possible owing to financial reasons. In regard to Cotton ginning factories, the Punjab Report states that ventilation was again far from satisfactory but apart from a drastic alteration in the method of ginning little can be done to improve ventilation sufficiently to dispose of the dust in ginning rooms the cost of such alteration is at present prohibitive. The Central Provinces mention however, slight improvement as the provisions of ridge ventilation and openings in the factory walls just below the eaves has become more general. The provision of ridge ventilation in cotton ginning factories has been a standard practice in the United Provinces in respect of new factories and is reported to have proved satisfactory when combined with a reasonable height of roof. The extended use of electricity is steadily improving the general standard of lighting and is commended on with approval in all Provincial factory reports for the year 1931.

Extent of Medical Facilities provided.—The result of the enquiry into Welfare work conducted by the Labour Office in 1926 shows that the provision of facilities for medical attendance and the supply of medicines is fairly general in all the larger labour employing organisations in the Bombay Presidency. The Textile Labour Union in Ahmedabad is the only association of employees which provides medical facilities for its members. There are also Government Municipal or charitable hospitals and dispensaries which are open to the public and which are used by the labouring classes. In the United Provinces, many of the larger employers maintain dispensaries but no hospitals. The Dufferin Fund a private organisation aided by grants from Government and local bodies, maintains female hospitals at the more important towns. The Lady Chelmsford Maternity and Child Welfare League maintains a number of centres for child welfare and the treatment of maternity cases. Many of the employers in the Central Provinces and Bihar

have provided well-equipped dispensaries and medical facilities are within easy reach of the workers. In almost all the factories and every important mining area in the Province. Some of the larger concerns in Bihar and Orissa and in the Punjab also provide medical facilities for their employees. In Madras only a few large factories provide dispensaries. Medical facilities in the plantations are fairly good. All the jute mills in the neighbourhood of Calcutta provide dispensaries but most of the doctors in charge are not registered medical graduates. In all the tea gardens in Assam and in Bengal medical attendance and medicine are provided for all classes of employees. The medical arrangements in a large number of estates are supervised by European medical officers. Well-equipped hospitals are also provided for the labour force in the mines and oil fields in Assam. Part time medical attendance and medicines are provided by the employers in the Assam Mines Board Area. Medical facilities are also provided in the mines in Madras. In the Jharia Mining Settlement eight hospitals are maintained by employers, the number of beds vary from 6 to 12 in each ward.

All the Provincial Factory Reports for the year 1931 record a year of normal health amongst factory workers. There were no severe epidemics. A few minor outbreaks of cholera and smallpox occurred in the Central Provinces and in three jute mills and in a cotton mill in Bengal and sporadic epidemics of malaria in other places. Continued improvement in general sanitary conditions in the larger factories is reported in all provinces. In Bombay concentration on several factories of the bazaar type has led to considerable improvements and a rise in the standard of neighbouring smaller concerns not yet amenable to this Act. The lack of municipal facilities for the disposal of trade waste in Ahmedabad is stated to be a cause of insanitary factory surroundings in that area. The sanitary arrangements in seasonal factories and in the smaller perennial factories and those in outlying districts are not it is stated, as satisfactory as the inspection departments would like them to be.

Maternity Benefits

In September 1924 Mr N. M. Joshi made the first attempt in the Legislative Assembly to introduce a Bill to make provision for the payment of maternity benefits in certain industries. Under this Bill the Local Governments were to be asked to establish a Maternity Benefit Fund and to make payments out of this Fund. The Bill, after circulation, was thrown out by the Assembly in August 1925.

The first Province in India to pass a Maternity Benefit Act was Bombay. The Act came into force on 1st July 1929. According to this Act the payment of maternity benefits is an obligation which is imposed directly on the employer. The third annual Report on the administration of this Act shows there were 10,00 claims paid for 100 women employed and the total amount of maternity benefit paid under the Act was Rs. 1,28,542. The Bombay Municipality has started since February 1928, a maternity benefit scheme by which

benefit is given to halalkhore and scavenging women in the form of leave with full pay not exceeding 42 consecutive days including the date of confinement, as certified by the Executive Health Officer if the birth takes place in Bombay and by a Police Patel or by hospital authorities if it takes place out of Bombay.

An Act was passed by the Central Provinces Council in 1930 on the same lines as that in Bombay.

In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. During the period of advanced pregnancy and after childbirth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at childbirth is often granted in addition. The bonus is in some cases conditional on the child being healthy. The Assam Railway and Trading Company the next largest employers of labour in Assam grants six months' leave on half pay provided the women have been examined by the medical officers and attend hospital once a week. The Assam Oil Company grants leave on half pay for three months. On some estates in Colaba District female coolies are fed free for a month before and a month after confinement. On other estates maternity benefit ranging from Rs 8 to Rs 5 is paid and in some other estates free feeding of the women for two weeks before and three weeks after confinement is arranged.

Labour Commission's Recommendations.—Among the more important recommendations made by the Royal Commission on Indian Labour in connexion with the health of the industrial worker are the following—

(a) India should have an Institute of Nutrition

(b) Local authorities should construct sanitary markets in all urban and industrial areas

(c) Adulteration of Foods Acts should be in force in all Provinces

(d) In industrial provinces Public Health Departments should be strengthened to deal with industrial hygiene and industrial disease

(e) Women should be appointed to public health staff particularly in the more industrialised Provinces

(f) Comprehensive Public Health Acts should be passed in all Provinces

(g) Where piped water supplies are not available special precautions as to purity should be taken

(h) Every provincial health department every railway administration and all Boards of Health and welfare in mining areas should employ a full time bacteriologist

(i) Government diploma for health visitors should be instituted as the recognised qualification required of all women aspiring to such posts

(j) In the larger industrial areas Government local authorities and industrial managements should co-operate in the development of child welfare centres and women's clubs and Government should give percentage grants for approved schemes

(k) Maternity Benefit legislation on the lines of the Bombay and Central Provinces Acts should be enacted in all Provinces and

(l) All methods should be explored that may lead to the alleviation of existing hardships arising from the need of provision for sickness

WELFARE WORK.

(Excluding Health and Housing)

In 1926, the Government of India requested all Provincial Governments to collect full and comprehensive information with regard to the measures undertaken and the efforts made to ameliorate the conditions under which the workers live when they are not actually employed. The enquiry originated as the result of the Recommendation adopted by the Sixth Session of the International Labour Conference in connexion with the development of facilities for the utilisation of workers spare time. The results of this enquiry, which the Government of India hope to publish in due course will be of considerable interest. The Labour Office conducted an enquiry in the Bombay Presidency the results of which were published in the issue of the *Labour Gazette* for January 1927.

Apart from the few individual employers who have organised welfare work on modern lines, the first organised attempt to introduce welfare activities of a particular type

was taken by the Bombay Millowners Association early last year. In a circular letter dated 8th January 1930, addressed to the mills affiliated to the Bombay Millowners Association, this Association requested all mills in Bombay City to give their wholehearted co-operation to their efforts for devising machinery for the improvement of the relations between the management and labour by giving immediate effect, wherever it is possible among other things, to those classes of welfare work which have been uniformly successful, e.g. (a) periodical social gatherings of workpeople (b) provision of free milk dispensaries as soon as financial considerations permit and (c) the establishment of creches at all mills.

The Royal Commission on Indian Labour have recommended that there should be a more general extension on the part of the employer of welfare work in its broader sense and that in the larger jute and cotton industrial areas

mills and factories should organise in groups each establishment having its own welfare centre and health visitor under the supervision of a woman doctor employed by the group.

Employment of Welfare Officers and Workers.—The All-India Industrial Welfare Conference of 1922 passed a resolution that social service organisations should be asked to take up the work of training welfare workers. The establishments of workers' committees in all industrial establishments was also urged but very little progress appears to have been made so far in this direction.

In the Bombay Presidency except in the case of the Sholapur Spinning and Weaving Mills in Sholapur and the Currimbhoy Khakim Workmen's Institute at Bombay, no other employers have employed any special welfare officers or workers to conduct their welfare activities. But Messrs E D Sassoon & Co Ltd, have appointed an England returned B Sc of the London University as a Labour Officer for all their eleven Textile Mills in Bombay City.

In Bihar and Orissa, the Tata Iron and Steel Company has recently appointed a welfare officer with an office and staff to co-ordinate the various welfare activities that have been carried on by the Steel Company.

In the Central Provinces and Berar except at the Empress Mills, no regular staff of welfare officers and workers has been appointed.

In the United Provinces, the British India Corporation employ a full-time welfare superintendent and a trained staff consisting of 4 doctors, 5 nurses, 8 matrons, 8 compounders, about a dozen midwives, 10 teachers and 2 sergeant patrols.

Messrs Begg, Sutherland and Company have recently engaged the services of a superintendent to organise welfare work for their employees.

In Bengal, attempts have been made by some mills to set up day and night schools but many of these schools are reported to have been closed owing to the lack of interest shown by the employees. Except for the facilities for technical training that are provided at the Ichhapur Hike Factory, the Comspore Gun and Shell Factory and the Government Weaving School at Secunderabad there is little or no organised provision for industrial and vocational training in the industrial centres in Bengal.

In Bombay, the Bombay Municipality has introduced compulsory education in F and G Wards which are chiefly peopled by millhands. In the Government factories at Kharkee, the Kharkee Education Society which is well supported by the factory authorities conducts six night schools. The Gokak Mills Company maintains one night school for adult workers. In Ahmedabad one mill runs a school for half-timers and eight mills maintain schools for workers' children. Three mills in the Sholapur district and the Government workshop at Dapodi provide for the primary education of half-timers.

The Social Service League, Bombay, maintains 9 night schools and a Textile Technical School at Parel, for imparting practical and theoretical training to actual mill workers. The Bombay Y.M.C.A. conducts 14 night schools with an average daily attendance of about 500. The Ahmedabad Labour Union conducted in 1930, 11 day schools, 10 night schools one Nursery school, one boarding school for boys and one boarding school for girls.

In Bihar and Orissa, the Tata Iron and Steel Company has established a Technical Institute at Jamshedpur to train in theory and practice certain selected students for positions in the operating departments. The Company also maintains twenty-two schools for the education of the children of its employees.

In Madras, seventy factories registered under the Indian Factories Act have provided schools for half-timers and in some cases for employees' children also. The Buckingham and Carnatic Mills maintain a day as well as a night school. The day school is an elementary school with 5 standards and has a technical section attached to it.

In Burma, very few firms provide facilities for education. The Burma Oil Company maintains schools in the Yenang Yung Oilfield for about 800 children and proposes to start a night school for its employees. The Burma Corporation makes an annual donation of Rs 1,000 for the maintenance of the Anglo Vernacular Middle School at Nambu and is also constructing a school at Dawdwin for the education of the children of its employees.

In the United Provinces the British India Corporation maintained in 1928 four day schools for boys and girls, two night schools and two industrial classes for employees. The Kigh Mills at Cawnpore, the United Agra Mills Agra and the B N W Railway Workshops at Gorakhpur also provide for the education of the children of the employees.

In the Punjab, only the new Egerton Woollen Mills Company Dharawal, maintains a school.

In the Central Provinces and Berar the Empress Mills in Nagpur have Nursery and primary classes for the children in the creches. The educational work outside the mills is conducted by the Young Men's Christian Association which has established 9 centres where the mill workers reside. Of these 8 centres have night schools. The Empress Mills also make annual contributions of about Rs 3,500 to other schools where the children of the work people study.

In Assam, some of the tea gardens maintain schools for children, but these schools are not popular as the labourers are generally recruited from the aboriginal tribes with whom education is at a discount, particularly as it interferes with the earnings of their children who find employment in the gardens. The Assam Oil Company maintains a Middle English School and the Assam Railways and Trading Company provides a Middle English and a Primary School for the children of their employees. No industry provides schools for adult labourers.

Welfare Work on Railways.

Recreation—Railways as a group are the largest employers of labour in India and their welfare work is therefore being dealt with separately. All Railways provide facilities for

recreation for their employees and their children. The number of recreational clubs or institutes provided on each railway are shown in the following table—

Name of Railway	Number of Institutes for	
	Europeans and Anglo Indians	Indians
North Western Railway	32	19
East Indian Railway	33	26
Eastern Bengal Railway	11	14
Burma Railways	15 in all	
Great Indian Peninsula Railway	2*	50 (2 for all nationalities)
Bombay Baroda and Central India Railway	17	12
Bengal Nagpur Railway	14	19
Madras and Southern Mahratta Railway	24	7
South Indian Railway	19 in all	

Each institute is regarded as a club provided by the Railway free of rent. The institutes provide a reading room indoor and outdoor games etc. and are generally self-supporting although grants are made from fine funds to meet the recurring expenses in deserving cases. The railways also undertake to recover the subscriptions of the members through the paymasters and to remit them to the manager of the institute. The membership of the institutes is compulsory on some railways.

Sports committees and athletic clubs have been formed on several railways e.g. the G. I. P. and the East Indian Railways with the object of promoting athletic sports among the employees and organizing tournaments. The Indian Railway Athletic Association has been recently formed for the promotion and development of inter-railway athletic competitions of all kinds. This is a registered association and its membership is open to the Railway Board and its subordinate offices as well as to railways which are parties to the Indian Railway Conference Association. Inter-district or inter-divisional competitions are also run by local sports committees with the idea of encouraging sports among all classes of staff. The inter-railway boxing, wrestling and foot-ball competitions are arranged in four groups.

The cinema shows and magic lantern lectures which have been recently organized for the recreation of railway employees are growing in popularity with the staff.

Education—Almost all Railways provide facilities for the education of their illiterate staffs as well as the children of Railway employees. The progress made in this direction on each railway may be briefly stated as follows—

The N. W. Railway have started two special

mental schools for adult workers in the running locomotive sheds at Lahore and Bhi respectively. It is also intended to open another at Kotli shed shortly. The experiment has so far been confined to the locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway provide 37 schools for the employees of the Operating Department. The Eastern Bengal Railway provide 9 night schools for adult employees the daily average attendance at these schools being 309. On the Burma Railways educational facilities for adult workmen have hitherto proved a failure and another experimental school has recently been opened for firemen.

The B. B. & C. I. Railway has recently opened classes for imparting instruction in the three R's at 3 centres on the Broad Gauge and 3 on the Metre Gauge systems. As an inducement to study, a bonus of Rs. 5 is paid to each man passing a simple test. On the A. B. Railway, the Locomotive Department holds classes at Luding, Badarpur and Chittagong to assist drivers to qualify as English speaking, which grade carries a higher pay. The only facilities given by the B. & N. W. Railway are first aid classes and subjects of a technical nature in the Locomotive Department. The Bengal Nagpur Railway provides 14 schools for imparting elementary training in reading, writing and rudimentary arithmetic to Indian drivers shunters and firemen so as to enable them to make themselves personally acquainted with the rules and orders affecting train working. On the M. & S. M. Railway there are two night schools at Hubli and Guntakal respectively both of which receive financial support from the Company.

Schools for the education of adult workmen do not exist on the G I P Railway but a school is established at Bina for imparting technical instruction and conducting refresher courses in Railway working.

For Workers' Children.—The facilities provided for the education of the children of railway employees are as under —

97 schools for European and Anglo Indian children and 123 schools for Indian children are maintained at suitable centres and the total number of pupils on the rolls is 4,165 and 15,967 respectively. The total expenditure from revenue on the European and Anglo Indian schools is Rs 402 lakhs per annum and on the Indian schools Rs 1.4 lakhs. The Railway Department also aids certain schools for children of railway employees. The total number of children in railway aided schools is 3,521 (European and Anglo Indian) and 7,704 (Indian) and the total annual grants made by the Railway are Rs 49,365 and Rs 46,584 respectively. The Railway Department also gives direct financial assistance to its employees towards the education of their children in certain hill schools. The total expenditure on this account in 1927-28 was Rs. 3.5 lakhs for Europeans and Anglo Indians and Rs. 28.8 thousands for Indians.

Facilities are also afforded by the grant of passes and concession tickets to enable the children to attend schools.

The present methods of assistance have recently evoked public criticism on the score of their being more favourable to European and Anglo Indian employees than to the Indian and with a view to eliminating all trace of racial discrimination the Railway Board placed Mr C. E. W. Jones, C.I.E. I.E.S. on special duty in 1927 with instructions to collect all

facts and figures regarding the assistance given by railways for the education of the children of their employees. On a consideration of Mr Jones report the Board has now formulated their future policy on the following lines —

All railway schools would be transferred to local authorities or private bodies, special grants being given out of railway funds where necessary. The assistance given by the Railway Department would be confined to employees who draw pay below a prescribed maximum and obliged to send their children to boarding schools. The assistance would take the form of grants to the employees of a fixed proportion not exceeding one-half of the board and tuition fees, the proportion depending upon the pay drawn by the parent and falling with the increase in pay. The assistance would be open to all employees without distinction of community race or creed.

Several companies' railways have also signified their willingness to adopt a similar policy. But the question is still receiving further consideration because of the representations received in connexion with the scheme.

Co-operation.—The Railway Administration have noticed that heavy indebtedness degrades the employee and impairs his efficiency and they have therefore encouraged the formation of co-operative credit societies and co-operative stores by the employees.

Co-operative Credit Societies have been formed on all railways and are managed by committees generally elected from among the shareholders. But in some cases the heads of the departments are required to be the chairman of the Committees and they have power to nominate some of the members of the committees.

WAGES.

It was in 1873 that one of the earliest attempts to collect wage statistics in India was made by issuing instructions to District Officers to submit half yearly returns showing the average monthly wages of certain classes of skilled and unskilled labour. The returns thus collected were utilized for compiling a series of comparable statistics of wages for selected Districts in each Province and these statistics were published in the publication *Prices and Wages* issued annually by the Director-General of Commercial Intelligence and Statistics. A reference, however to Mr Dutt's Report on an Enquiry into Rise of Prices in India would show that these statistics were found to be wholly unreliable and consequently these half yearly returns from District Officers have been discontinued since 1910. In their place a quinquennial wage census was adopted in all Provinces, except in the Central Provinces where an annual return was obtained from District Officers. The first quinquennial wage census was held in 1911-12 and the second in 1916-17. The statistics regarding wages continued to be published in "*Prices and Wages*" which gave the results of the quinquennial wage censuses in respect of a few urban and rural occupations. As the statistics were still far from satisfactory the third wage census, which was due in 1921-22, was abandoned

except in Madras and the Punjab. In 1921 an attempt was made by the Government of India to hold an All India census of industrial wages with the active and voluntary co-operation of employers, but nothing could be done partly because a number of employers either failed to submit returns or submitted incomplete returns and partly because neither the Central nor the Local Governments were able to provide the staff required for the purpose owing to financial stringency. The annual issues of *Prices and Wages* were also suspended in 1923 as a result of retrenchment and no regular official wage statistics are now published for British India as a whole.

In the United Provinces a scheme for a census of Industrial Wages to be taken along with the regular census was considered but was not carried through. A periodical survey of wages has been carried out every five years since 1912 in the Punjab. These surveys deal with the wages of certain classes of workers in three principal towns, in selected villages unaffected by urban conditions, and at certain Railway stations to secure a means of comparison with rural wages in the same neighbourhood. Beyond the figures of average monthly wages of certain classes of labour submitted by factories in all

Provinces every year for inclusion in the annual Reports on the Administration of the Indian Factories Act, no regular and detailed statistics of industrial wages are available in Bengal and in the Central Provinces and Berar. In Madras quinquennial wages censuses have been conducted since 1908 showing the average wages of certain artisans (as well as farm servants employed in agricultural labour) in respect of homogeneous tracts and districts. These censuses however only related to rural and urban wages and not to industrial wages. A thorough investigation of the conditions of labour, and particularly the rates of wages on tea estates in Assam, was made in 1921-22 by a Committee

appointed by the Government of that Province. The Labour Office of the Government of Bombay conducted three enquiries into the wages of workers in the cotton mills in the Bombay Presidency in 1921, 1923 and 1926 respectively. Apart from these enquiries, the Labour Office has also conducted enquiries into (1) Wages of peons in Bombay, (2) Agricultural Wages (3) Wages of Municipal workers, (4) Clerical Wages in Bombay City and (5) Wages of Printing Press Workers in selected Printing Presses in Bombay City. The results of all these enquiries have been published either in the form of special Reports or in the 'Labour Gazette.'

WAGE RATES.

Agriculture—Whether wages paid to agricultural labour in India have kept pace with the increase in the cost of living is for several reasons a very difficult question to answer. Firstly conditions vary so markedly between provinces and provinces that it is almost impossible to obtain accurate and comparable figures of wages for different classes of agricultural labour. Secondly there exists a variety of methods adopted for remunerating the workers engaged in different agricultural areas in India. For example, in the Punjab, there are four forms of wages, such as (a) purely cash wages (b) cash wages with supplements which may consist of food, tobacco lodging, bedding clothing etc (c) purely grain wages and (d) wages other than in cash or grain. In the Punjab the last quinquennial wages survey was held in December 1927. This survey shows that the following were the average daily wages of the three important classes of agricultural labour in rural areas in the Punjab—

Carpenters	16 to 32 annas a day
Masons	16 to 38 annas a day
Unskilled labourers	5½ to 16½ annas a day

As regards the last occupation it may be pointed out that the most frequent wage was between 7½ to 8½ annas. The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which gave the average daily earnings of three classes of agricultural labour *viz.*, skilled labour, ordinary labour and field labour in each of the 23 districts of the Bombay Presidency separately for urban areas and rural areas.

for each of 23 years from 1900 to 1922. The figures for each year from 1923 to 1927 have been published in the Bombay Administration Reports. The wages prevailing in other provinces for similar types of labour do not compare very unfavourably with wages in the Bombay Presidency for any particular year for which a comparison is made. This statement requires an important qualification. It is not meant that the money amounts actually paid are similar. The rates of wages in different provinces vary according to the extent of their industrialisation and money wages in provinces which are mainly agricultural are on a lower level than the money wages in Provinces which are highly industrialised such as Bombay and Bengal. There is no doubt whatever that wages have considerably improved in all parts of India between 1913 to 1925. Taking the Bombay Presidency as a whole the downward tendency in the level of wages which set in 1925 and continued up to the end of 1927 was checked during the year 1928 during which period wages of all classes of agricultural labour except field labour in urban areas and ordinary labour in rural areas, either remained stationary or showed a definite upward tendency.

Comparison of conditions in India to day with the pre-war year shows that during this particular period the condition of the Indian labourer has undoubtedly improved. This is amply proved by the figures given below showing the index numbers of daily average wages of skilled labourers, ordinary labourers and field labourers for urban areas and for rural areas for the Bombay Presidency.

AGRICULTURAL WAGES (NOMINAL)

Index Numbers for the Bombay Presidency (including Sind) 1913=100

Year	Urban areas			Rural Areas.		
	Field Labour	Ordinary Labour	Skilled Labour	Field Labour	Ordinary Labour	Skilled Labour
1922	189	192	195	170	162	179
1923	200	200	196	171	171	187
1924	195	196	200	176	181	191
1925	221	208	224	206	181	211
1926	221	204	216	198	181	216
1927	200	192	211	173	175	210
1928	191	192	212	186	179	213
1929	188	193	205	171	173	205
1930	174	179	196	139	143	172
1931	163	157	185			

The Cotton Textile Industry—The most important centres of the cotton textile industry in India are situated in the Bombay Presidency. The main sources of information as regards the wages paid in this industry are the Reports of three Enquiries conducted by the Labour Office of the Government of Bombay into Wages and Hours of Labour in the Cotton Mill Industry in the Bombay Presidency.

It is claimed that the 1926 Enquiry as compared with the previous two Enquiries was more satisfactory in its method, more detailed in its scope and more accurate and reliable in its results as the information collected related to each individual worker and not to groups of workers in each occupation as was the case in the previous Enquiries. The results of this Enquiry give among other things figures for average daily earnings of all occupations of cotton mill operatives, average monthly earnings for operatives covered in Bombay and Sholapur the average number of days worked, the number of operatives working full time i.e. working on all the working days during the Census month, the average earnings of these working full time frequency of attendance for the mills in Bombay the percentage absenteeism by departments and details regarding amounts of bonuses secured by the workers.

Wages in the Bombay and the Sholapur mills are paid monthly irrespective of the fact whether they are based on time rates or piece rates or fixed on a daily or a monthly basis or in any other manner. While in the case of the Ahmedabad mills wages are paid fortnightly or by baptes referring to a period generally of 14 days for piece workers and to a period of 16 days for time workers.

Different systems are adopted at these three centres with regard to the methods of calculating wages. In the case of the mills in Bombay City there is first a basic rate to which is added a dearness allowance of 80 per cent. for male piece workers and 70 per cent. for male time workers and all female workers. Those mills which grant a good attendance bonus add the amount of the bonus granted, to the gross wage from which are deducted any fines that might be inflicted before arriving at the net wages payable.

The term basic in the case of the Bombay mills may be generally considered to apply to the pre-war year although in the case of some individual mills it might apply to any year between 1912 and 1918 in which year the first increase of 15 per cent. was granted as dearness allowance. This was increased to 35 per cent. on the 1st January 1919. The next increase granted on 1st February 1920 was 20 per cent. extra to male workers on time rates and to female workers both on time and piece rates, and 40 per cent. extra to male operatives on piece rates—the total percentages amounting to 55 and 75 respectively. On the 1st November 1920 the 55 per cent. was raised to 70 per cent. and the 75 per cent. to 80 per cent. There have been no changes in these percentages since the year 1921.

In the Ahmedabad mills there is a complete lack of uniformity in the methods adopted for calculating the different additions and deductions before arriving at the final earnings.

The methods of calculating wages in Sholapur are different from those in Bombay and Ahmedabad. There are five items which go to make the full wage of an operative. These items are (1) the basic rate, (2) dearness allowance which is 35 per cent. in the case of all female workers and all male time workers and 40 per cent. in the case of all male piece workers, (3) the number of grace days granted for which payment is made, (4) bonus, and (5) the benefit derived for the grain concession. The following table gives the average daily earnings by centres for all adult male operatives, all adult female operatives, all children and all adult operatives, covered by the 1926 Enquiry—

Centre	AVERAGE DAILY EARNINGS FOR			
	Men	Women	Children	All adults
	Rs a p	Rs a p	Rs a p	Rs a p
Bombay	1 8 0	0 11 11		1 5 3
A h m e d a b a d	1 6 8	0 12 6	0 5 6	1 4 8
Sholapur	1 0 5	0 6 8	0 4 0	0 14 8

The average monthly earnings of all workers in mills selected for the 1926 Enquiry at Bombay and Sholapur in the month of July, 1926 in each age and sex group were as follows—

Sex and Age group	CENTRE.	
	Bombay	Sholapur
	Rs a p	Rs a p
Men	37 10 2	23 10 5
Women	17 12 4	9 15 7
Children		5 10 4
All adults	32 14 0	21 7 9

The following table shows by centres for each sex and age group the average monthly earnings of all operatives who worked on all the working days in the census months for Bombay and Sholapur and for Ahmedabad. The figures for Ahmedabad were arrived at by multiplying the average daily earnings by 27.

Average monthly earnings of Full Time Workers

Sex and Age group	CENTRE		
	Bombay	Ahmedabad	Sholapur
	Rs a p	Rs a p	Rs a p
Men	44 3 6	35 8 6	26 10 2
Women	20 4 6	20 15 3	11 6 7
Children		9 4 6	6 12 10
All adults	40 4 6	26 0 8	24 8 1

Jute Industry

The jute industry holds the premier position amongst the industries in the Bengal Presidency. The following table gives the average monthly wages of some important occupations in a jute mill. The figures are not the exact averages of wages of the total number of employees in the industry. They are averages obtained from the actual payments made in some representative mills.

Department	Designation	Average monthly wages	
		Multiple shift.	Single shift.
	<i>Men</i>	Rs a p	Rs a p
Roving Machines	Rovers	12 15 0	14 7 0
	Shifters	12 0 0	14 2 0
Spinning Frames	Warp spinners	13 4 0	16 14 0
	Weft spinners	16 0 0	17 10 0
Winding	Bobbin cleaners	10 0 0	11 0 0
	Warp winders (piece workers)	21 6 0	23 0 0
Weaving	Weft " { " " }	24 8 0	28 2 0
	Hessian weavers (" ")	28 3 0	31 0 0
Dressing and Beaming	Sacking weavers (piece workers)	29 5 0	32 1 0
	Beamers and dressers	28 8 0	32 0 0
Sack sewing workers	Machine sewers (piece)	21 11 0	20 10 0
Engineering Section	Engine Staff	19 0 0	22 8 0
Workshop hands—	Firemen	28 1 0	30 2 0
	Mason	34 0 0	31 0 0
Machine shop fitting	Carpenters (Chinese)	85 0 0	93 5 0
	Carpenters (Indian)	80 0 0	83 2 0
Tin Smithy	Turners (Metal)	40 0 0	40 0 0
	Tin Smith	30 0 0	30 0 0
Blacksmith shop	Blacksmith	36 0 0	36 0 0
	<i>Women</i>		
Batching Softeners	Feeders	11 12 0	13 5 0
	Receivers	11 8 0	13 5 0
Teasers	Feeders	9 6 0	12 9 0
Preparing Breaker Carding Machines	Feeders	9 8 0	11 13 0
	Receivers	9 0 0	11 2 0
Finishing Carding Machines	Feeders	10 6 0	11 7 0
	Receivers	9 7 0	11 0 0
Drawing machines	Feeders	10 0 0	11 2 0
	Receivers	10 0 0	11 2 0
Roving machines	Feeders	10 6 0	11 6 0
	Sweepers	9 6 0	11 2 0
Twist Frames	Twisters	13 8 0	14 16 0
	Sweepers	12 1 0	13 10 0
Sack Sewing	Hand Sewers	13 5 0	14 11 0

It will be seen from the above table that there is an appreciable monetary advantage to workers in the single-shift system.

Wages in Mines

The tables given below show the daily earnings in the month of December for each of the two years 1930 and 1931 for workers in the main occupations in coalfields and the other important mines in British India

Daily earnings of underground workers in important coalfields in British India

Coolies and Presses.

The male coolies in the gin factories in Madras and the Punjab earn on an average annas 6 per day while the female coolies get only as 5-1 and as 6 respectively. In the Central Provinces the average daily earnings of male and female coolies are as. 10-2 and as. 5-10 respectively.

The average daily wages of female press coolies in Madras and the Central Provinces amount to annas 5-10 while those of male coolies amount to annas 9-6 and annas 12-10 respectively.

The Plantations.—Labour in the tea gardens in Assam is paid on a piece work basis.

In addition to the standard daily task which the worker must execute in order to earn his wages (called *Hariva*) the labourer is given an opportunity at certain seasons to supplement his earnings by the performance of a second task the payment for which is known as *hoca*. In some cases where it is impracticable to prescribe a definite task as in leaf plucking at the beginning and the end of the season payment is made by time. A distinctive feature of work in the gardens is that the labourer usually brings his family with him and the wife and sometimes the children are also wage earners. The joint earnings of a family must always be taken into consideration. The average family of a labourer

has been calculated as consisting of one working man, one working woman, about three tenths of a working child and non working child and about two-tenths of an adult non working dependant. The following table give the average monthly earnings of the labourers in the tea gardens in Assam

Table showing the average family monthly earnings in the tea gardens in Assam calculated on the average daily strength in 1914, 1922 and 1928

Periods of Wage Payment.—There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various important branches of organized industry in India. In scarcely any industry is there a single period of wage payment. Different systems are found in establishments belonging to the same industry and in the same district and within the same establishment different classes of workers are frequently paid for different periods. The month, the fortnight and the week are generally the periods of wage payment in Cement and Brick Works, Cotton Ginning and Pressing Factories, Flour Mills and Engineering Works. Monthly payment of wages is mainly adopted for workers in Printing Presses, Municipalities, Tramways and Railways. In the Cotton Mill Industry wages are calculated on a monthly basis in all the mills outside Ahmedabad. In the case of the Ahmedabad mills, wages of process operatives are calculated on a fortnightly basis and of workers in the maintenance department on a monthly basis.

In mines, tea gardens and rice mills the predominant periods of wage payment are a month and a week. In jute mills wages are calculated per week. Wages are calculated on both the monthly and the fortnightly basis in the Iron and Steel Industry, Sugar Mills and in Tanneries. The system of monthly payment appears to be universal in its application to supervisory and clerical staffs engaged in all different industrial establishments, while the most general system in the case of casual labour is of a daily payment of wages.

Periods elapsing before payment.—The waiting period, or the time which elapses between the end of the period for which wages are earned and the date of payment varies considerably from industry to industry and from establishment to establishment in the same industry. It may be generally stated that the longer the wage period the more delayed is the payment of wages. Monthly wages are not paid so promptly as fortnightly wages, weekly wages are withheld for still shorter periods and daily wages of casual labour are nearly always paid on the day on which they are earned or on the following day. Speaking generally the average period of waiting may be considered to be 10 to 15 days in the case of monthly payments, 5 to 7 days for fortnightly payments, and 2 to 4 days in the case of weekly payments. Another factor which affects the period of waiting is the method of payments. Where workers are paid on piece rates, intricate calculations are required to ascertain the amount due and consequently piece rate wages cannot be paid so promptly as wages of workers on fixed time rates of pay.

Indebtedness prevails to a very great extent among the labourers, but no reliable figures are available except those for the Bombay Presidency which were collected by the Bombay Labour Office during its enquiries into the workers' family budgets for different centres. From the statistics of the Empress Mills the percentage of labourers indebted appears to be more than 50. Though exact figures for the Punjab are not available it is reported that the volume of indebtedness amongst the agriculturists is greater than anywhere else in India. As regards urban and industrial labourers it may safely be assumed that a greater majority are in debt to their food suppliers. In Madras the indebtedness of the worker is heavy especially in the case of plantations where it is reported that 75 per cent of the wages of the labourers are taken away by money lenders on pay days. The mine managers of the Jharia coalfields in Bihar and Orissa generally put this figure at one week's wages. It is also stated that the extent of indebtedness varies with caste and social custom. In Bombay City, interest in debts forms nearly three per cent of the total monthly expenditure. Of the families considered for the Labour Office enquiry no fewer than 47 per cent were in debt. The extent of the indebtedness of the family in debt is ordinarily the equivalent of two and a half months' earnings. The extremes were 14 months and one-third of a month's earnings respectively. As regards single men for whom 603 budgets were collected, 45 per cent were in debt, the average expenditure on interest being as 12 s and the average expenditure on interest for those in debt being Rs 1 11 2 per month. Enquiries for the Bombay Port Trust workers showed that over 80 per cent of the families considered were found to be in debt. In the majority of cases the amount of debt varied from a month's income to four months' income. In Ahmedabad during 1928 about 69 per cent of the families were in debt. The amount of debt varied from a few rupees to many times the monthly income. According to an enquiry made by the Labour Office in the year 1925 into the family budgets of cotton mill workers in Sholapur City, 83 per cent of the cotton mill workers' families in

Sholapur were in debt the extent of which varied from less than a month's income to many times the monthly income. In 49 per cent of cases however it was equal to between one and four months' income of the family.

Bonus and Profit Sharing Schemes—

The successful working of a profit sharing scheme pre-supposes the realisation by the worker of an identity between the various interests engaged in the concern and a conscientious effort on their part to do their best for its maximum success. The employers of labour do not feel that labour conditions in India are such as to justify the hope that this high ideal of co-operation will be realised in a substantial measure in practice. The only solitary concern in which profit sharing schemes have been tried are the Tata Iron and Steel Company and in the Buckingham and the Carnatic Mills. In 1928 the Tata Iron and Steel Company introduced a scheme under which a monthly bonus based on production is paid to all men drawing less than Rs 300 per mensem or Rs 10 per day, whose work contributes to the production obtained and who have been in the Company a service for at least six months. In the Buckingham and the Carnatic Mills a bonus is paid to the workmen on a basis relative to the dividend declared.

Bonuses are paid for a variety of reasons. Some concerns grant bonus for regular attendances and for economical utilisation of material. In some collieries in Bihar and Orissa a worker is paid a sort of bonus for working six days a week. A bonus is also being granted for raising

and loading extra tubs. The Tata Iron and Steel Company grant bonuses, (1) for general production (2) for departmental output, and (3) regular attendance. This is paid to all employees drawing less than Rs 8 per day. The Company has also introduced a 'Jack pot' scheme. The idea of this scheme is that if 50 men are required to perform certain duties connected with the operation of any unit and the full force is not present, the wages which would have been payable to the absentees are distributed amongst those present.

The system of paying bonus in addition to a cash wage either for better work or for better attendance obtains in several industrial concerns in the Bombay Presidency and may be said to be almost general in textile mills especially in Bombay and Ahmedabad. An enquiry by the Labour Office in 1926-27 showed that in the textile industry no fewer than 109 out of the 144 mills in the Presidency which furnished information reported that bonus was granted for regular attendance and 76 or 52.8 per cent. stated that bonuses were given for turning out work better than the specified standards. Several cotton gins and presses also reported that such bonuses were granted but in the majority of such cases these rewards took the form of annual bonuses given on the results of a season's working. In a few cases the system is similar to that of profit sharing—the bonus payable being dependent on the profits made by a concern during the year. Bonuses for better work were, however, not generally granted in Public Utility Companies, Municipalities, commercial offices and Government and other non-factory organisations.

WAGES ON RAILWAYS

Owing to the different types of grades of pay which are prevalent on the Railways it is not possible to give particulars for all of them. Scales of pay of some important classes of railway servants on some principal

railways have therefore been set out in the tables below. The limits of pay given in the tables show the minimum of the lower grade and the maximum attainable in the higher grade.

Statement showing scales of pay of important classes of Railway servants other than Workshop employees and Colliery Staff on the principal Railways

Besides the usual pay the employees of the railways are granted allowances and perquisites for special work, climatic and local conditions, etc.

Amount sent to villages.—In the absence of a completely urbanised industrial labour force in India, the practice of remitting part of the wages earned by workers in industrial centres to their place of origin appears to be very common. But no authorised or statistical information for a definite period of time is available as regards the amounts sent by workpeople in this manner. If statistics pertaining to this subject were compiled, it would help a good deal in estimating the agrarian contact of Indian industrial workers. In the Central Provinces and Berar 50 per cent of immigrants from the United Provinces leave their families behind in their villages to look after cultivation. These labourers are reported to be remitting more than 50 per cent of their income home. The other immigrants in that province from Central India and the Bombay Presidency are said to be sending 25 per cent of their earnings to their homes. Estimates of amounts sent by money order by the various post offices in the jute mill areas in Bengal are annually published in the reports of the Indian Jute Mills Association. The figure for 1928 comes to Rs 173,57,816-1-2, but it does not purely represent the amounts sent by jute mill employees only. Labourers from coal mines in Bengal coming from outside the coal fields are reported to send or take home to their villages from 30 to 40 per cent of their earnings. In the case of the miner in the mining fields of Bihar and Orissa it is roughly estimated that he sends home all his savings—which amount to about 8 annas to Rs. 1-8-0 per week. Results of a special enquiry made in the case of an important cotton mill at Cawnpore in which wages are paid fortnightly showed that during the particular period of two weeks covered by the enquiry 3.8 per cent of the wages received by workmen was remitted by money orders through the office attached to that mill. In the course of its family budget investigation the Labour Office of the Government of Bombay collected some information regarding remittances of amounts by workers' families. In Bombay City a large number of workers do not maintain an establishment but live as boarders and though married keep their dependants in their native places. In the case of resident families the average monthly amount remitted comes to Rs 111 which constitutes 3.2 per cent of the family income which is Rs 524-6 per month. In the case of persons living singly in the Bombay City the average monthly remittance comes to Rs 117-1 which constitutes 9.2 per cent of their monthly income. The labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore remittances to dependants is not an important item in the worker's budget. It appears that nearly 7 per cent of the working class families in Ahmedabad remit money to their dependants living away from them. The average for only those families remitting money comes to Rs 6-6-9 per month. Sholapur draws its labour force from the immediate neighbourhood and the labour there is not of the same cosmopolitan character as in Bombay. Of the total number of families whose budgets were collected during the family budget enquiry at that centre only 6 per cent reported that they had to remit money every month to their dependants in villages. The average of the

amount remitted by such families comes to Rs 4-12."

Deductions.—In June 1926 the Government of India requested Local Governments to make enquiries in their respective administrations, as to the extent to which fines and other deductions were being realised by employers in India from their workpeople. The views of Local Governments were also invited on the desirability of taking any action legislative or otherwise to counter any abuses which might be found to prevail. The information given below is based mostly on the various Provincial enquiries made for the purpose but there is no reason to believe that the conditions have changed, materially since then.

The system of making deductions from wages in respect of fines is general in the textile industry and other industrial concerns. With regard to factories the system exists in almost all Government and Local Fund factories and in the majority of the more organised and larger workshops. It is also associated with municipal palitane factories and establishments working regularly throughout the year. It does not appear to be the general practice in seasonal establishments such as gins and presses. In offices the system is almost wholly limited to the firing of peons and menials in the establishments where the system exists although in a few cases clerks are also occasionally fined. Fining is general in the large hotels, clubs and restaurants but it can be said to be almost absent in most of the larger commercial organisations such as shops, stores, etc. The only notable concerns in which fines are very rarely imposed are the tea gardens in Assam and Bengal and the coal fields in Bengal and Bihar and Orissa. The abuse is said to be limited by the consideration that the shortage of labour compels the employers to treat their employees with every consideration.

Labour Commission's Recommendations.—The Royal Commission on Indian Labour have made several important recommendations in connexion with the income of the industrial workers and the question of his indebtedness. In discussing the possible application to India of the minimum wage Convention adopted at the 1928 session of the International Labour Conference, the Commission are of opinion that the convention in referring to trades in which wages are exceptionally low must be regarded as having in view trades in which wages are low not by comparison with western or other foreign standards but by comparison with the general trend of wages and wage levels in kindred occupations in the country concerned. If the principle of the minimum wage is to be applied to India they consider that it would first be necessary to create machinery for fixing minimum rates of wages in those trades in which wages are lowest and where there is no question of collective bargaining. The industries indicated for a careful study of conditions are mica, wool cleaning, Shalae Bidi (the indigenous cigarette) manufacturing, Carpet weaving and Tanneries and those in which there is a strong presumption that the conditions warrant detailed investigation. Full information re wages and conditions should be collected

and if the surveys indicate sweating the trades should be demarcated and the number and the composition of wage Boards should be decided. In the setting up of wage boards important criteria for consideration should be the cost of enforcement and a policy of gradualness should not be lost sight of. If the investigations appear to warrant minimum wage fixing machinery, the necessary legislation for setting up such machinery should be undertaken.

Deductions.—The Commission consider that legislation regarding deductions from wages and fines is both necessary and desirable. With regard to fines they recommend that (a) the flogging of children should be prohibited (b) the payment of the fine should not be spread over more than one month from the date on which it was imposed (c) that the maximum amount to be deducted in fines should not exceed in any month half an anna in the rupee of the worker's earnings (d) the sums received from fines should be credited to a purpose beneficial to the employees as a whole and approved by some recognised authority and (e) Employers should be required to post notices specifying the acts or omissions in respect of which a fine may be imposed and fines for acts or omission not so specified should be made illegal. Deductions for loss or damage should in no case exceed the wholesale price of the goods damaged. With regard to other deductions these may be permitted in case of housing accommodation provided by the employer and for tools and raw materials and in all cases should not exceed the equivalent value of the services rendered. The Commission recommend that such legislation should not be applicable in the first instance only to those factories under the Factories Act and to Railways. The Commission's recommendations in the matter have been examined in detail departmentally by the Government of India and a Bill giving effect to these recommendations was introduced in the Legislative Assembly on the 1st February 1933.

Insolventcies.—The action taken by the Government of India with regard to the Royal Commission's recommendations on exempting the salaries and wages of all workmen receiving less than Rs. 300 a month and the making of

the setting an industrial establishment for the purpose of collecting debts a criminal and cognisable offence have already been dealt with under an earlier chapter. Other proposals which are under the consideration of the Government of India are—

(a) At least so far as industrial workers in receipt of wages or salary of less than Rs. 100 a month are concerned arrest and imprisonment for debt should be abolished except where the debtor has been proved to be both able and unwilling to pay.

(b) Worker's contribution to provident funds maintained by private employers and certified by Government for the purpose should be safeguarded from attachments, and

(c) Legislation should be enacted providing a summary procedure for the liquidation of workers' unsecured debts.

Periods of wage payments.—The Commission recommend that in textile industries, railways and engineering workshops and iron and steel works the law should require the payment of wages to the process operatives at intervals not exceeding 16 days. Such legislation should be extended to other industries and Railways if considered necessary. An important proviso is that if any reduction is made in the period of wage payment no worker should forfeit any privilege or concession which is attached to payment on a monthly basis. They also recommend that legislation should be enacted providing for the payment of wages in factories, mines, railways and plantations within seven days from the expiry of the period in which they have been earned in the ordinary case and as early as possible but not later than 2 days from the date of discharge in the case of an operative who is discharged. These recommendations have been accepted by the Government of India who introduced a Bill to regulate the payment of wages to certain classes of persons employed in industry in the Legislative Assembly on the 1st February 1933. This Bill also covers the subject of deductions and fines.

COST OF LIVING AND STANDARD OF LIFE

The publication of a cost of living index with a pre-war base for the working classes in Bombay City was started in the *Labour Gazette* from September 1921 and the scope and method of its compilation are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. The index number is based on what is known as the aggregate expenditure method and includes in all 24 items representing food, fuel and lighting, clothing and rent. The table below gives the Bombay working class cost of living index numbers month by month from January 1917

Bombay working class cost of living index numbers by months
(July 1914=100)

The Labour Office conducted in the year 1926 an enquiry into working class budgets in 1930 items representing food, fuel and Ahmedabad and the results of this enquiry have been used in the construction of a cost of living index for that centre. The Ahmedabad working class cost of living index number has been compiled on a post-war base and has been published in the *Labour Gazette* since January 1930. Items representing food, fuel and lighting, clothing, house rent and miscellaneous groups have been included in the index. The following table gives the index numbers from August 1927 to November 1930 —

Ahmedabad working class cost of living index numbers by months
(Average prices from August 1926 to July 1927=100)

Month	1927	1928	1929	1930	1931	1932	Month	1927	1928	1929	1930	1931	1932

Cost of Living Indexes have during recent years been compiled for Nagpur and Jabalpur in the Central Provinces (with January 1927 as base) and for four classes of industrial workers in Rangoon in Burma (with 1931=100). The monthly figures of the cost of living index numbers per these six indexes during the year 1932 were as follows—

Month	Nagpur	Jabalpur	Rangoon			
			Burmans	Famils Telugus and Oriyas	Hindu stanis	Christians
January	63	61	96	90	100	96
February	60	61	97	100	100	97

Average for year	62	66	98	98	96	96

Standard of Life—Very little information is available regarding the standard of living of the working classes in India. The most satisfactory method of obtaining this information is by means of a family budget enquiry in which information is collected regarding the composition, income and expenditure of the family. To enable general conclusions to be drawn from investigations of this type it is always necessary to conduct the enquiries by what is known as the extensive method, an attempt being made to secure the information from a large number of families so as to minimise the effect of the peculiarities of exceptional cases. The sampling method is often resorted to in conducting extensive family budget enquiries because of the impracticability of collecting data by the

census method. It is essential that the sample should be representative in order to yield reliable results.

At the Third International Labour Conference of Labour Statisticians held at Geneva in October 1926 the Committee on family budgets passed a resolution that in order to provide adequate information with regard to actual standards of living enquiries should be conducted generally at intervals of not more than ten years in the income, expenditure and conditions of living of families representative of large homogeneous sections of the population. It was also decided that for a complete enquiry information should be collected as to the district in which the family resides, the composition of the household, the

industries and occupations of members of the family, the nature of the housing accommodation and the amount of each important item of family income and expenditure together with quantities of purchases, where practicable. It was agreed however that a less detailed investigation confining the particulars of the family income would be sufficient where the sole object of the enquiry is to provide weights for the calculation of cost of living index numbers.

Family budgets were collected by the Labour Office for 3 076 working class families in Bombay City in 1921-22 and the report based on the results thereof was published in 1923. It has been decided to undertake a new family budget enquiry when industrial conditions become normal in Bombay City and to use weights based on the results of that enquiry in compiling a fresh cost of living index number for Bombay on a new base period. The Labour Office collected 986 budgets of working class families in Ahmedabad in 1925 and 1 133 budgets of cotton mill workers in Sholapur in 1925. The reports based on the results of these enquiries were published in 1928. A small family Budget investigation for cotton mill workers in Bombay city was also conducted by the Labour Office in 1930 but the results of this investigation have not been published so far. A second enquiry into family Budgets of industrial workers in Bombay City intended to cover

about 1 200 families was started by the Bombay Labour Office in May 1932 and it is hoped that the results of this enquiry will be published next year.

In the United Provinces a number of budgets were collected at Cawnpore with the object of compiling a cost of living index number. But the results of the enquiry were not found to be satisfactory and the province has not been compiling any cost of living index number.

The Labour Statistics Bureau, Rangoon, which was established by the Government of Burma in 1925, has made an extensive enquiry into the standard and cost of living of the working classes in Rangoon and the report based on 4 809 budgets was published in 1928. The results of this enquiry have been separately analysed for Burmese, Telugu Tamil, Uriya Hindustani and Chittagonian workers. Separate index numbers for each of the different classes of workers have also been published at the end of the report. 1 002 Budgets for the working class families in Nagpur and 507 budgets for working class families at Jabulpore were collected between September 1926 and January 1927 for compiling cost of living index numbers for these two centres. The figures for the Nagpur Jabulpore and Rangoon indexes for the year 1932 have been given in the above table.

TRADE UNIONS

The history of trade unionism in India is a history of recent years. It was not until 1918 that labour had begun definitely to organise itself. Previous to that year very little effort appears to have been made to establish organisations of labour. The earliest association of workers in India was the Amalgamated Society of Railway Servants of India and Burma which had been registered under the Indian Companies Act and its main activities were in connexion with the provision of various benefits to its members such as Legal Defence, sickness Insurance, Life Assurance etc. After the Indian Trade Unions Act 1926, came into force this Association registered under it as a Trade Union with the new name of the National Union of Railwaymen of India and Burma. The Bombay Postal Union founded in 1907 mainly for the clerical classes employed in the Bombay Post Office, a Union of warpers in the Ahmedabad cotton mills formed in 1917, the Clerks Union, Bombay established in April 1918 in order to organise the various classes of clerical labour employed in commercial and other offices in Bombay city and the Madras Labour Union formed in 1918 for the textile workers in the three mills in the city of Madras, were the main labour organisations in existence at the end of the year 1918. In addition, there existed certain benevolent social institutions such as the Kamgar Hitwadhak Sabha and the Social Service League whose activities were directed towards the betterment of the condition of the working classes. But these Societies were not composed of workers themselves.

The year 1918 may be said to be a landmark in the history of the Indian Trade Union movement, for from that year onwards there has been a more

or less steady growth of trade unions despite the inevitable fluctuations in their prosperity. The economic circumstances of the time must be regarded as the dominant factor contributing to the establishment of trade unionism in India. In the two years following 1918 the epidemic of industrial strikes assumed serious proportions and reached a climax towards the close of the year 1920. The number of labour unions also increased very rapidly and unions were formed of workers in all possible industries and occupations. Most of these Unions were however, merely Strike Committees brought into existence either before or after particular strikes in order either to engineer or to conduct them. These Committees were either dissolved as soon as their purpose was served or remained dormant until another strike in the trade broke out. Most of the remaining Unions formed during the period 1918-20 were unstable and nearly 75 per cent of them died an early death in the following year. There was a definite check to the progress of the trade union movement in India during the next two or three years. But although individual Unions collapsed as rapidly as they were formed the movement itself showed signs of permanence and vitality.

Perhaps the most important factor which retarded the growth in the movement immediately following the successes which met the earlier formations or Strike Committees, which they really were, was the definitely hostile attitude of the employers to all combinations of their employees. It was not until the passing of the Indian Trade Unions Act which made it morally obligatory on employers to recognise those Unions of their employees which had registered under the Act that a change in the angle of vision was noticeable.

Nature of leadership.—The Indian Trade Union movement, in its early beginnings, was essentially an economic one, and to regard labour unions as being engineered solely by politicians as the result of their propaganda is to misread the origin of this movement. The Indian workman is predominantly illiterate and has even now few leaders from his own class to whom he can turn for guidance. In consequence, trade unions in India have been led by middle class men especially professional lawyers and others, who have not perhaps in all cases made a distinction between economic and political considerations. In the words of Mr. A. B. Burnett-Hurst, 'social workers did not take the initiative' but 'allowed the lawyer politician class to capture and control these bodies. Many of the so-called leaders of Indian Labour who were drawn from the lawyer politician class often exploited the ignorance and credulity of the labour force for their own material advantage, or for the propagation of their pet political doctrine, in addition to looking after the welfare of the labourers. There were however, several notable exceptions. Leaders like Mr. N. M. Joshi, Dewan Chaman Lal, the Rev. C. F. Andrews, Mr. M. K. Gandhi, Mr. V. V. Giri, Mr. B. Shiva Rao, Mr. B. R. Bakale M.L.C., Mr. Syed Munawar, M.L.C. and Mr. Anasuya Sarabhai endeavoured to create Union for the benefit of the workers and for the general improvement in the conditions of life and work of the labouring classes. During the last few years however the principles of communism have been disseminated amongst the masses of India by the members of the Workers and Peasants Party which is an agent in India of the Communist International. The Communist and took advantage of the economic unrest prevalent in the country, early in the year 1928 and usurped the leadership of the working classes within a short period of time and were able to assume control over the executive of the principal textile and railway unions in Bombay Madras and Bengal. The Communists captivated the minds of the workers by painting the existing conditions as black as possible and contrasting them with a supreme state of wealth and happiness which is promised under the regime of a dictatorship of a workers proletariat. The discontentment amongst the workers over conditions of work has been aggravated by the incessant preachings of revolutionary doctrines. The credulity of the Indian labourer has been of great advantage to these emissaries of revolution in creating in him a class hatred against the employers and also instilling in his mind an abhorrence for the Government established by law in the country. These agitators, occupying positions of vantage,

have instigated disastrous strikes in pursuance of purely political ends often with a callous disregard of the subsequent sufferings and losses inflicted on their ignorant and hapless dupes. The sanity and sobriety of moderate leadership have no great attraction for the large majority of the labourers. The moderate leaders have however been fighting their battles for leadership with the extremist revolutionaries, and were for a time successful in keeping the latter under control. At the moment of writing it has become impossible for the moderates and the avowed Communists to work shoulder to shoulder in the labour movement, and a split has occurred between the two, the Unions standing for constitutional progress rallying under the banner of the Moderates with those in favour of Communist principles accepting the leadership of the Red Flag Organisations.

Progress of Trade Unions since 1918.—The trade union movement spread to various industries and occupations in India during the years following the Armistice but a number of them passed out of existence very soon after they were started. The more stable Unions were of clerks, railway workers, postal employees and seamen. The peculiar feature of the trade union movement in India is that it did not in the early stages of its progress make much headway in the more important manufacturing industries and this constituted a weak point in the movement. Whereas in other countries the clerical employees organised themselves on the model of the industrial workers long after the latter had well organised themselves in strong Unions, in India the former have come up if not first, at least simultaneously with industrial unions and have established themselves more permanently.

The following figures illustrate the growth of Trade Unions in the Bombay Presidency—

Year	No of Unions	No of Members
1922	22	51,472
1923	19	45,087
1924	36	52,237
1925	38	49,318
1926	56	74,875
1927	72	87,840
1928	94	138,072
1929	99	196,748
1930	93	128,393
1931	97	115,667
1932	100	171,528

The distribution of the membership as at 1st September 1932 by classes of industries is as follows—

Class of Industry	No of Unions	Membership	Percentage of membership to total
Textiles	13	30,178	27.10
Railways (including railway workshops)	8	26,874	23.32
Seamen	3	29,756	26.72
Posts and Telegraphs	84	5,845	5.08
Municipal	8	9,883	2.59
Miscellaneous	54	13,787	12.24
Total	100	111,528	100.00

There are in addition two federations of Postal Unions, one of Railway Employees Unions and a fourth which is a Central Union governing a number of individual Unions of textile workers in Ahmedabad. (For the constitution membership and other particulars regarding these organisations reference may be made to the issues of the Bombay Labour Gazette). The Central Labour Board and the Bombay Trades Council which had been included in the list of Federations in the Bombay Presidency are now defunct.

The Punjab has no heavy concentration of industrial labour and consequently the extent of organisation among both employers and employed is up to the present little. There is, however, a vague striving among the employed towards co-operation and combination especially for the purpose of demanding better remuneration and considering the question of resorting to direct action for enforcing their demands on their employers. No Communist influence has been noticeable in the Punjab where industrial disputes have been stated to have occurred as a result of the normal antagonism between employers and employed. The only large employers of labour in the Punjab are the N. W. Railway Administration, and four out of the 19 registered Unions are of the employees of the various departments of the N. W. Railway and cover in all about 13,000 members.

In the United Provinces the number of Associations of workers is rather small, compared to its industrial importance. There are in all about 10 Unions all of recent growth. Some of the Associations formed during the general upheaval following the War and especially during the days of Non-Co-operation have since died or become moribund. Organised labour forms a very small proportion of the total Organisation of labour outside Cawnpore is almost non-existent and even in Cawnpore only about 10 per cent of the labour is organised. There has been a growing interest of labour in trade unionism which appears to have the prospect of a rapid development in the future.

The Central Provinces and Berar have seven registered trade unions. The classes of

workers who have been embraced by the Trade movement in this part of India are (1) Textile workers, (2) Press employees, (3) Scavengers, (4) Motor drivers, (5) Railway workers, (6) Postal employees and (7) Clerks. Trade unionism is stated to be yet in its infancy in this Province and the Labour Unions appear to have done little to improve the conditions under which their members work.

The trade union movement in Madras received a setback in 1921-22 as a result of the failure of the strike in the Buckingham and Carnatic mills. During the year 1922-23 most of the Unions were dormant and the only Union which showed signs of activity was the M. and S. M. Railway Workshop Employees Union, Perambur. The trade union activities were revived in 1923-24 and the following Unions became once more active—(1) The Madras Labour Union, (2) The Madras Tramwaymen's Union, (3) The Corporation Scavengers Union, (4) the S. I. Railway Employees Union and (5) the Coimbatore Labour Union. The Madras Harbour Port Trust Workmen's Union was revived in 1925-26. A section of the workmen of the Buckingham and Carnatic mills organised a separate Union in 1925-26 called the Buckingham and Carnatic Mills Employees Union as a rival to the Madras Labour Union which is an old organisation in the same industry. The Cordite Factory Labour Union, Aruvankadu came into prominence during 1926-27. Unions were newly formed for the employees of the Public Works Department workshops and the Government Central Press Madras while the Diocesan Press Employees Union which had remained dormant was revived. The labourers working in the cotton spinning and pressing factories in Tiruppur, Coimbatore District started a Union for their benefit. Most of the Unions included in their programme a demand for separate representation for Labour in the Legislative Council. The Oil Workers Union and certain other Unions came into prominence only when there was an impending labour dispute. There were nineteen registered Trade Unions in the Madras Presidency at the end of March 1931.

RAILWAYS

There are four Railway Associations of an all India character with the following membership—

	Membership
The All India Railwaymen's Federation	100,000
The Anglo Indian and Domiciled European Association (This is not a Trade Union)	10,000

The All India and Burma Covenant Non-Gazetted Railway Services Association

265

The National Union of Railwaymen of India and Burma

2,000

In addition there are over 20 individual Unions distributed over the principal Railways in India.

ALL-INDIA LABOUR ASSOCIATION

The All-India Railwaymen's Federation—Twelve Unions of Railway workers are affiliated to it and its total membership amounts to nearly 1,00,000. It is growing in influence and popularity and in May 1929 a deputation waited on

Sir George Baly, the Railway Member of the Government of India, to discuss the grievances of railway employees in general. No less than 25 subjects were included for discussion but the more important of them related to wages and

the position of daily rated men, hours of work and the weekly rest, insecurity of service and appeals, medical facilities, fines, extension of provident fund benefits and quarters. The Railway Board have initiated enquiries with a view to taking the necessary action in the matter.

The National Union of Railwaymen of India and Burma was started by the Amalgamated Society of Railway Servants of India and Burma which came into existence as a sequel to the Great Indian Peninsula Railway Guards strike in 1907. It was at first registered under the Indian Companies Act, but after the Indian Trade Unions Act came into being it altered its name, redrafted its constitution and registered as a Trade Union. It has a membership of over 2,000 employees.

The All-India and Burmah Covenanted Non-Gazetted Railway Services Association.

This Association, whose membership is limited to covenanted Europeans employed as foremen in railway workshops in India was started in October 1926 with the object of securing for its members the benefits of the Lee Commission's recommendations. It submitted a memorial to the Viceroy on this question in November 1926. It has a membership of about 300 employees scattered all over India and has its Head Office in Bombay. The Association registered with the Registrar of Trade Unions, Bombay Presidency in March 1928 but transferred its Head Office to Punjab in 1929.

The All-India Trade Union Congress.

This organisation was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual Labour Unions in India which till then remained inchoate and were unable to take concerted action and (2) to recommend workers delegates to the International Labour Conferences. When the Government of India had to select a Labour representative to attend the Washington Conference in 1919 there was no representative body of labour in India to be consulted and they therefore appointed Mr. N. M. Joshi as the Workers' Delegate. In order therefore that responsible Labour opinion in India might have a voice in the selection of the delegates to the International Labour Conferences, the All-India Trade Union Congress was organised and the first session of the Congress was held in Bombay on the 31st October 1920. Eight hundred delegates from different parts of India were present and sixty Unions were affiliated and 42 others expressed their sympathy with the Congress. It became a central organisation of the trade union movement in India but from the beginning it had a strong political colour. Its presidents and secretaries have all been politicians first and labour leaders next, with the exception of a few persons like Mr. N. M. Joshi. The Congress appointed itself a permanent body to meet once a year. It has a definite constitution, an elected Executive to carry on the work, and Provincial Councils which, under the Executive are responsible for co-ordinating the work in the respective provinces. The main object of the Congress is to co-ordinate the activities of all the labour organisations in all the provinces

in India and generally to further the interests of Indian labour in matters economic, social and political. It may also co-operate and federate with organisations of labour having similar objects in any part of the world.

The Executive Council of the Congress consists of a Chairman, the Vice-Chairman or Vice-Chairmen, the Treasurer, the General Secretary or General Secretaries, the Secretary or Secretaries and the Assistant Secretary or Assistant Secretaries as ex-officio members and not more than ten additional members including the ex-Presidents of the All India Trade Union Congress, elected at the annual session of the Congress and the representatives elected by the affiliated unions on the following basis—

- 1 Representative for unions with a membership upto 1,000,
- 2 Representatives for unions with a membership between 1,000 and 3,000
- 3 Representatives for unions with a membership between 4,000 and 5,000
- 4 Representatives for unions with a membership above 5,000

The individual Unions affiliated to the Congress are conceded full autonomy with regard to the management of their own affairs according to their rules.

The second Session of the Congress was held in 1921 at Jharia under the Presidency of Mr. Joseph Baptista. The third Session was held at Lahore in 1923 with Mr. C. R. Das as President. The fourth Session held at Calcutta in 1924 was also presided over by Mr. C. R. Das. Out of the 43 resolutions passed at this Session some dealt with the recruitment of Seamen and their eligibility for securing compensation under the Workmen's Compensation Act. The fifth Session was held in Bombay in 1925 with Mr. Dhundiraj R. Thengdi of Nagpur in the chair. Mr. V. V. Giri of Berhampur was the President of the sixth Session held in Madras in 1926. Delhi was the centre where the seventh Conference of the Congress was held in 1927 and the President was Rai Sahab Chandrika Prasad Dewan Cham. An Lall, M.L.A., was the President of the Calcutta Session of the Congress held in 1927. The ninth Session was held in 1928 at Jharia with Mr. M. Dand in the chair. It is significant that at this Conference Pandit Jawaharlal Nehru moved a resolution protesting against imperialism.

The tenth assembly of the Trade Union Congress which met at Nagpur in 1929 under the presidency of Pandit Jawaharlal Nehru will remain as the most important landmark in the history of organised labour in India. It marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by Communist Agents in India resulting in a split between the genuine trade union leadership on the one hand and the votaries

of communism on the other. The fundamental issue upon which the split in the Trade Union movement occurred was whether the labour movement in India shall be inspired and conducted for the betterment of the industrial workers or whether it shall be utilised as a means to promote and bring about revolution in the country. The proceedings at the Session made it impossible for the rival forces to carry on any longer under a common organisation. The reasons contributing to the ultimate split were as follows—The Bombay Girm Kamgar Union and the G. I. P. Railwaymen's Union applied for affiliation the former with a membership figure of 54 000 and the latter 45 000. The Bombay Girm Kamgar Union could produce no audited documents as required. However it was admitted a member on the basis of a membership of 40 000. The G. I. P. Railwaymen's Union was affiliated on a strength of 80 000 members. This meant that a large part of the voting power was vested in the representatives of these two Unions which were of communist persuasion. The Executive of the Congress was also captured by the revolutionaries, and resolutions for the boycott of the Royal Commission on India Labour, affiliation of the Congress to the League Against Imperialism, the appointment of the Workers Welfare League, a Communist organisation in England as Agents of the Congress for Great Britain and the boycott of the International Labour Conference at Geneva were passed both by the Executive Committee and the open session of the Congress. The moderate leaders of labour, including Messrs. N. M. Joshi, V. V. Giri, B. Shiva Rao, R. E. Bakhale and Dewan Chaman Lal seceded from the Congress and set up a separate federation under the name of the 'All India Trades Union Federation' in order to co-ordinate the activities of non-communist Trade Unions in India. Endeavours made to draw the seceders back into the fold of the All-India Trade Union Congress have not met with any success. The Labour Unions in Ahmedabad which draw their inspiration mainly from Mr. M. K. Gandhi and are the best organised and most successful trade unions in India have not during the ten years of the Trade Union movement in India shown any desire to become affiliated to the Congress.

The eleventh Session of the Trade Union Congress held in Calcutta in July 1931 led to further disintegration in the ranks of labour and once again the Communist from Bombay were responsible. The Girm Kamgar Union had split into two parts, both bitterly opposed to each other. One led by Mr. H. V. Deshpande, General Secretary of the Trade Union Congress and the other by Mr. G. E. Kandalkar, President of the G. E. U. and a Vice-President of the Congress and both groups claimed to be the Girm Kamgar Union and therefore entitled to vote at the Congress. The President Mr. S. C. Bose, a Congress politician decided in favour of Mr. Kandalkar whereupon Mr. Deshpande and the representatives of a few other unions broke away from the Congress with the result that this organisation which should guide and control the Trade Union movement in India is a useless and effete body with no influence and trifling membership.

Trade Union Legislation

In 1920 a Company owning a mill whose workers were on strike brought a suit against the leader of the local labour union which was conducting the strike and others seeking to restrain them from inducing the plaintiff's workmen to break their contracts and suing for damages for their actions in this respect. The Madras High Court to whom the suit was referred gave their decision granting an *injunction* restraining the defendants from inciting the plaintiff's employees to continue the strike. The case was eventually withdrawn but the proceedings suggested that in the absence of legislation even legitimate trade union activity was attended by considerable peril. As a result of a resolution moved by Mr. N. M. Joshi and accepted by the Legislative Assembly in March 1921, Government were committed to take steps as soon as practicable to introduce such legislation as might be necessary for the registration & protection of Trade Unions. The Government of India accordingly formulated certain tentative proposals and circulated them for eliciting public opinion. The opinions expressed were by no means unanimous—some considered the proposed legislation premature while some others realised that legislation was necessary but at the same time considered Trade Unions as a pernicious and dangerous growth which should be rigidly controlled and others again urged that sufficient protection should be granted to them. In August 1924 the Government of India introduced a draft Bill for opinion. The Bill conferred certain privileges only on registered Trade Unions and left the question of registration at the option of Trade Unions themselves. Provision was also made to ensure that the funds of a registered Trade Union are not expended on causes in which the bulk of the members have little interest. A regular audit of the funds was proposed to be made compulsory and the manner in which the executive should be composed was also provided for.

A number of amendments were made by the Select Committee and in the Legislative Assembly. A clause permitting registered Trade Unions to maintain funds for political purposes was added. The provision was on the model of the British Law on the subject and those members who contracted out of the liability to subscribe should not be compelled to contribute to the Political Fund nor would failure to contribute involve any disability or disadvantage except in so far as the control and management of the Political Fund was concerned. The Bill was passed on the 8th February and received the assent of the Governor General on the 25th March 1928. It came into effect from the 1st June 1927.

Mr. N. M. Joshi introduced in the Legislative Assembly on the 9th February 1928, a Bill to amend Section 43 of the Indian Penal Code in order to extend to the officers and members of unregistered Trade Unions the protection afforded by Section 17 of the Indian Trade Unions Act 1926, which lays down that 'no

officer or member of a registered Trade Union shall be liable to punishment under sub-section (2) of section 120B of the Indian Penal Code in respect of any agreement made between the members for the purposes of furthering any such object of the Trade Union as is specified in Section 15 unless the agreement is an agreement to commit an offence. The Assembly, however, threw out the Bill.

A Bill was introduced in the Legislative Assembly on the 4th September 1928 with a view to amending Section 11 of the Indian Trade Unions Act 1926. It was pointed out in the Statement of Objects and Reasons that the existing section 11 of the Act admitted of doubt in two respects namely (1) It did not indicate clearly whether the first appeal lay to the judge appointed for the area within which the Registrar's office is situated or to the judge appointed for the area within which the head office of the trade union is situated. The amendment is intended to make it clear that the latter is the competent court, (2) It did not indicate clearly what judge might be appointed to hear appeals in the Presidency towns and in Bangalore. The amendment designed to make it clear that in such areas the appeal lies to the High Court and there is no second appeal. The opportunity has also been taken to define clearly the powers of the High Court in second appeals.

The Bill was passed and received the assent of the Governor General on 25th September 1928.

Working of the Act.—The Act has now been in operation for more than 5½ years. All India Statistics on the working of the Act for the year ending 31st March 1931 published in July 1932 show that there were 119 registered trade unions in the British Provinces in the whole of India during the year ending March 1931 as compared with 104 registered unions during the year ending 31st March 1930. The distribution of the registered Trade unions together with the figures for total membership

for all unions which submitted returns is as follows —

Provinces	Total No of Unions registered	Total membership of registered Unions
Ajmer Merwara	2	1 779
Bengal	24	73 956
Bihar and Orissa	3	36
Bombay	38	70 214
Burma	1	106
Central Provinces	7	4 381
Delhi	3	4 043
Madras	17	96 876
Punjab	18	9 981
United Provinces	6	12 843
Total	119	2 10 115*

* These figures are for the Unions which submitted returns of membership. Thirteen Unions did not submit their returns in time for their membership figures to be included.

No association of employers has yet applied for registration. No Trade Union was registered in the provinces of Assam, Baluchistan, and Coorg up to the end of March 1931. The great inducement to register has been the predisposition of employers generally to recognise Unions that are registered. In the case of Associations of Government Servants one of the conditions of their recognition by Government was that they should get themselves registered when the Trade Unions Act was brought into force. In view of the fact however that certain difficulties have arisen in connexion with the application of the Act to Government servants the question is under the consideration of the Government of India who have not yet formulated any definite conclusions. Pending the consideration of this question Government have relaxed the provision contained in the existing rules for the recognition of Associations of Government servants which requires them to register under the Act.

ROYAL COMMISSION'S RECOMMENDATIONS

With regard to Trade Unions the Labour Commission recommended that every employers organisation should set up a special committee for the purpose of giving continuous consideration to the improvement of the well being and efficiency of the workers in establishments controlled by its members, and that recognition of a Union should mean that the Union has the right to negotiate with the employer in respect of matters affecting either the common or individual interest of its members. The fact that a Union exists only of a minority of employees or the existence of rival Unions are not sufficient grounds for refusing recognition. With regard to the internal administration of Trade Unions the Commission recommended that Union leaders should endeavour to give as many members as possible some share in the work of the Union and that Trade Union

organisers should endeavour to find suitable men within the Union to act as officials and should train them for the position.

With regard to the Trade Unions Act, the Commission recommended that it should be re-examined during the year 1934 and that all limitations imposed on the activities of registered Unions and their officers should be reconsidered so as to ensure that the conditions attached to registration are not such as to prevent any well-conducted bona fide Union from applying for registration. Section 22 of the Act should be amended so as to provide that ordinarily not less than two thirds of the officers of a registered Trade Union shall be actually employed or engaged in an industry with which the Union is concerned.

INDUSTRIAL DISPUTES

The weapon of the strike in industry first came into prominence in India during the period immediately following the close of the War, when the majority of the strikes as shown in the introductory Section were designed to secure increases in wages commensurate with the rise in the cost of living. The epidemic of industrial strikes which characterised the period 1919-20 reached a climax in the winter of 1921. During this period strikes took place purely from economic causes and most of them ended successfully from the view point of the workers after a short struggle. After this period, however,

they tended to be more prolonged and less successful and partly owing to political causes there were a number of fairly serious disputes in public utility services. In more recent years the machinations of the Communists have been increasingly responsible for the calling of general strikes and their undue prolongation.

Extent of Disputes.—All India statistics of industrial disputes for each quarter and for each year have been compiled and published since 1920 by the Government of India in the Department of Industries and Labour.

The following tables show the number of disputes which occurred during the seven year 1925-30 in each province and in each class of industry respectively —

Provinces.	No of disputes in						1931
	1925	1926	1927	1928	1929	1930	
Bengal	43	57	44*	60	35	31	47
Bombay	69	67	54*	111	70	75	83
Madras	4	2	19*	7	12	11	10
Central Provinces & Berar	6	4	2	1	2		7
United Provinces	6	1	3	2	4	2	11
Bihar & Orissa	2	3	4*	8	2	4	1
Burma	1	1	3	7	4	3	10
Punjab				2			7
Assam		1	12	5	9	16	12
Total	134	128	129	203	141†	148	16

* One strike extended to three provinces.

† Includes 3 disputes in Delhi

Industries	No of disputes in						1931
	1925	1926	1927	1928	1929	1930	
Cotton and woollen mills	69	57	60	111	78	68	75
Jute Mills	15	33	11	19	13	13	22
Engineering Workshops	7	4	6	11	7	10	5
Railways including Workshops	4	3	3	9	4	9	8
Others	37	31	49	54	39	48	56
Total	134	128	129	203	141	148	166

The peak in respect of the number of industrial disputes (203) was reached in the year 1928. More than 50 per cent of these disputes occurred in the Bombay Presidency while only about 30 per cent occurred in Bengal. In none of the

other provinces was there an average of at least one dispute per month during that year. The industry which was hit hardest was the cotton and woollen mill industry in which no less than 110 disputes took place during the year.

In 1931, 203 008 work people were involved in the 166 disputes & 2 408 123 working day were lost.

CONCILIATION AND ARBITRATION MACHINERY

Prior to the passing of the Trade Disputes Act as an all India measure early in the year 1929 there was, with the exception of a conciliation panel in Bengal, which will be dealt with lower down no official machinery for conciliation and arbitration in industrial disputes in India. The Employers and Workmen (Disputes) Act which was passed in 1940 to make provision for the speedy termination of certain disputes between workmen engaged in railway and other public works and their employers and which was extended, in case of the Bombay Presidency to the districts of Ahmednagar Broach Ahmedabad, Kaira, Poona Sholapur Surat and Thana in 1940 and 1881 and to Sind in 1873 dealt with individuals and did not provide any machinery for the settlement of disputes in other trades or industries. No records are available to show the extent to which this Act has been made use of in India. This Act was repealed in March 1932. The only provinces in which *ad hoc* Committees have been appointed during the previous ten years either to enquire into the question of providing machinery for the settlement of disputes or to deal with specific strikes are the Bengal and the Bombay Presidencies.

Bombay Presidency—The first Committee to be appointed in the Bombay Presidency was the Industrial Disputes Committee appointed on the 18th November 1921 with Sir Stanley Reed as Chairman to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes. This Committee made several recommendations with regard to the standardization of wages, trade unions, the attitude employers should adopt towards Unions of their workers and the recognition of such Unions, Works Committees, Welfare Work, Co-operative Societies, Housing of Labour etc. Their recommendations were in the nature of measures that might contribute to the prevention of industrial disputes. With regard to the methods of settlement when such disputes either develop irreconcilable differences between capital and labour or else become a menace to the community the Committee recommended the formation of an Industrial Court of Enquiry to be followed, if necessary, by an Industrial Court of Conciliation.

In pursuance of the recommendations made by the Industrial Disputes Committee the Government of Bombay published a Bill to provide for enquiry into and settlement of trade disputes in the *Bombay Government Gazette* in May 1924. It was intended to introduce this Bill in the Bombay Legislative Council at the Poona session in July of the same year, but, in the meanwhile the Government of India asked the Local Government not to proceed with this measure because they themselves intended to introduce similar legislation for the whole of India. This, however was not the first occasion on which the Government of India considered the question of the advisability of introducing legislation to provide for the settlement of disputes. In 1920 they circulated all Local

Governments asking their opinions as to the advisability of providing legislation on the lines of the Industrial Courts Act 1919. The opinions obtained by provincial Governments were almost unanimous that labour was not properly organised and that therefore no useful purpose would be served by such legislation. The majority of the provincial Governments adopted the same view.

Bombay Dispute Enquiry Committee—The next Committee to be appointed by the Government of Bombay was the Committee of Enquiry with Sir Norman Macleod, as Chairman to enquire into the general strike of the Bombay cotton mill workers of the year 1924 in connexion with the non payment of an annual bonus to the year 1923 by the Bombay mills.

The findings of the Committee were —

- (1) That the mill workers had not established any enforceable claim customary legal or equitable, to the annual payment of a bonus and
- (2) that the results of the working of the mill industry as a whole for the year 1923 were such as to justify the contention of the millowners that the profits did not admit of the payment of a bonus.

Bombay Strike Enquiry Committee—The third *ad hoc* Committee to be appointed in the Bombay Presidency was the Bombay Enquiry Committee under the Chairmanship of Sir Charles Fawcett, Judge of the Bombay High Court in connection with the general strike of the cotton mill workers in Bombay city of the year 1928 in pursuance of the agreement arrived at between the Bombay Millowners Association and the Joint Strike Committee at a conference held under the Chairmanship of the Hon. Sir Ghulam Hussain Hidayatullah General Member of the Government of Bombay on the 4th October 1928.

This Committee sat for a continuous period of five and a half months and its Report was published on the 26th March 1929.

Some of the conclusions and recommendations of the Bombay Strike Enquiry Committee were as follows —

- (1) The proposals of the Millowners Association (a) for standardization of wages, duties and numbers of operatives in a mill and (b) for standing Orders for the operatives about the conditions of their employment were in the main fair and reasonable.
- (2) While there was justification for the Association's proposal to make a cut of 7½ per cent in weavers wages, there were reasonable objections to be urged against its adoption in the present circumstances and it was recommended that it should be dropped by the Association provided the Labour leaders undertook to co-operate in working the scheme for the standardization of wages.

- (3) That part of the standardization scheme which is called the Rational or Efficiency system and which aims at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable
- (4) With regard to the Seventeen Demands submitted by the Joint Strike Committee some of the demands which were considered to be fair and reasonable were—
 - (a) That the Millowners shall not vary any of the present conditions to the disadvantage of the workers before securing the approval of the workers through their organisations
 - (b) That the Millowners Association shall not permit its individual members to vary the conditions of service to the disadvantage of the workers without the sanction of the Association.
 - (c) The rates of new varieties shall be fixed by the Millowners Association in consultation with the representatives of the Workers organisations
 - (d) Notices in vernacular showing the rates of piece work in detail should be posted in the Departments for the information of the workers
 - (e) That there should be no victimisation of men who had taken part in the strike or any Union activities. Most of these were eventually conceded by the Millowners Association
- (5) The following demands were held to be unfair and unreasonable—
 - (a) The wages of those workers whose average monthly wage is less than Rs 30 should be raised substantially
 - (b) The newly introduced system of compelling the workmen (1) to take out and present tickets of attendance and (2) to clean the machinery daily should be discontinued
- (6) The recommendations of the Committee for alleviating unemployment consequent on the introduction of efficiency methods of work were as follows —
 - (a) The millowners should set up some machinery for taking note of all cases where workers are discharged on account of reduction of staff, and help them as far as possible to get suitable employment either in some other mill or in some other industry
 - (b) The Millowners Association should consider the advisability of a scheme for the payment of a gratuity to a worker which may amount to say four weeks or six weeks wages according to his length of service

payable in suitable cases to discharged employees who may need help during the waiting period while they are seeking employment. The formation of an Out-of-Work Donation Fund on a voluntary basis to be created by a system of setting aside a contribution by the Millowners of one anna per operative per month to which fund the operatives through their representatives should be invited to contribute one anna or at least half an anna per head per month was suggested

- (7) The Trade Unions should combine to arrange for the assistance of an expert technical adviser in dealing with disputes arising under the Standardisation Scheme
- (8) In view of the fact that several matters required adjustment in connexion with the scheme for wage standardisation after it had been brought into operation and with a view to avoiding strikes and lockouts, machinery was provided by Mediation Rules agreed to by both sides for setting up Joint Committees to enquire into disputes arising under the scheme and to endeavour to arrange for their settlement

Owing to the undue prolongation of the general strike in the Bombay Cotton Mills of the year 1929 and the consequent disruption of labour, it was not possible for the Bombay Millowners Association to bring into operation the Mediation Rules recommended by the Bombay Strike Enquiry Committee for the simple reason that there are no recognised Unions representatives of Bombay Cotton Mill workers in the City. The Bombay Textile Labour Union, of which Mr. N. M. Joshi M.L.A. is the President has barely 400 members. The recognition accorded by the Bombay Millowners Association to the Bombay Ural Kamgar Union which claimed a membership of over fifty thousand after its registration in May 1928 was withdrawn by the Association on the publication of the reports of the Court of Enquiry appointed under the Trade Disputes Act to inquire into questions connected with the general strike of the year 1929 and the Riots Inquiry Committee. The Association has been giving anxious consideration to the practical steps which might be taken by mills to bring about better relations between employers and their workmen and for the prevention of accumulation of grievances. In a circular letter dated the 8th January 1930 addressed by the Association to all the mills affiliated to it, they issued instructions that all mills should take immediate steps where by complaints and grievances of the workers may be attended to by the management concerned at once. For this purpose complaint boxes were to be placed in the compounds of all mills in which workers are invited to put in petitions regarding their grievances or suggestions for improvement of conditions of work. The mills have been requested to give sympathetic consideration to any complaints or suggestions made and to redress or give effect to them wherever possible. Further measures calculated

to improve the relations between the employers and the employed are under consideration. The Association have also devised measures for joint discussions between managers of mills and the Association on general questions relating to the internal administration of the mills.

The next Committee to be appointed in the Bombay Presidency was a Court of Enquiry appointed under the Trade Disputes Act in connexion with the general strike of cotton mill operatives in Bombay City of 1920. After a prolonged enquiry into the causes of and the conduct of this strike which lasted for nearly four months the Pearson Court of Enquiry came to the unanimous conclusion that the whole of the blame for the calling and the continuation of the strike rested with the Bombay Girni Kamgar Union. The Report of the Court was published on the 16th Sept. and its moral effect was so great that the union called off the strike unconditionally on the next day.

Bengal—Several special Committees were appointed by the Government of Bengal during the period of intense industrial unrest during the years 1920-21.

(1) As the result of a strike of taxi drivers and professional drivers of private cars in Calcutta which was caused by objections to certain rules particularly (a) a new rule requiring medical examination of applicants for professional driver's license, and (b) another rule forbidding the carrying of attendants in taxis, Government appointed a Committee of Enquiry into the existing licensing regulations and the control of taxis cabs generally. The strike lasted from the 12th to the 20th January 1921, and ceased as a result of the institution of the inquiry. The Committee made a number of proposals for amendments in the existing regulations. These proposals were ultimately accepted and brought into effect on the 12th October 1921.

(2) As the result of a strike of drivers and conductors of Calcutta and Howrah tramways, which lasted from the 27th January to the 21st February 1921, Government appointed a Committee of Enquiry after the resumption of the work by the strikers on the 4th March 1921. The men resumed work towards the end of February on conditions (a) that the Calcutta Tramways Company would investigate their grievances and announce their decision within a week, and (b) that if the men were dissatisfied with the Company's decision Government would appoint a Committee of Enquiry. There was general agreement between the Company and the men's representatives in regard to the majority of the Committee's recommendations. Some, however of the Directors of the Company did not accept the terms. Another strike of the tramway employees of a much more protracted character broke out in 1923. It lasted from 20th December 1922 to 27th January 1923. No Committee of Enquiry was appointed, although the representatives of the men raised several points which arose from the previous inquiry. Work was resumed unconditionally.

(3) During a strike on the light railway of Messrs Martin and Company in the St Parganas and Howrah which lasted from the 16th June to the 2nd July 1921, a special Conciliation Board was constituted by Government by a resolution at the joint request of the employers and the employees concerned. The result of the Board's efforts was a compromise on most of the points raised by the workers, and as a result of the Board's recommendations it was agreed that joint works committees should be set up on the Howrah Amtia and Howrah Sheekhala lines. Works Committees were established soon after the Board's report was published but they failed to function owing to the men's indifference.

(4) The Bengal Legislative Council passed a resolution on the 4th March 1921 to the effect that Government should appoint a Committee to enquire into the general causes of the prevailing unrest and to suggest remedial measures. The report of the Committee was published on the 18th June 1921. The main recommendations of the Committee were—

- (a) the establishment of joint works committees in industrial concerns
- (b) non intervention of Government in private industrial disputes which it was considered should be settled by voluntary conciliation
- (c) the constitution by Government of a conciliation panel to deal with disputes in public utility services and
- (d) the appointment by Government of special conciliation bodies in the case of private industrial disputes if both parties desired outside intervention.

As the result of the recommendations of this Committee, a conciliation panel was constituted under Government resolution dated the 29th August 1921. The panel contained thirty names, and was composed on a representative basis, leading public bodies being asked to recommend persons to serve on it. The panel was reconstituted every year till 1929 when it was superseded by the Trade Disputes Act. Several applications for Government intervention were received during the period of the panel's existence but in no case did Government consider that intervention was justified.

The Government of Bengal agreed with the Committee's view that there was no reason why voluntary conciliation boards wisely constituted should not achieve a large measure of success in labour disputes affecting public utility services, where the parties had come to a dead lock, and a solution of the disputes could only be found in the intervention of outsiders. The panel was intended to deal only with disputes affecting public utility services in Calcutta and its neighbourhood. In the settlement of ordinary labour disputes not directly affecting the public, the Committee held that it was not ordinarily the duty of Government to intervene in such disputes either directly or indirectly, but if both parties express a desire that their differences should be investigated by an impartial authority, the Governor in Council should be prepared to establish a conciliation board to deal with the matter or to take such other action as might be suitable in the circumstances of the case.

TRADE DISPUTES LEGISLATION.

The history of the various proposals for legislation providing machinery for the prevention and settlement of industrial disputes in India covers a period of about ten years. The findings of the Industrial Disputes Committee appointed by the Government of Bombay in the year 1921 in pursuance of a Resolution moved in the Bombay Legislative Council for the appointment of a Committee to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes has already been dealt with above. Mention has also been made of the action taken by the Government of Bombay under circumstances which led to its abandonment owing to the Government of India circulating a draft Bill as an All India measure. The Bill circulated by the Government of India in August 1924 was very wide and comprehensive in scope and extent.

Nothing further was heard about this Bill until the end of 1925 when His Excellency the Viceroy in a speech at the Annual Meeting of the Associated Chambers of Commerce of India and Ceylon at Calcutta said: "The question of providing means of conciliation of trade disputes has been thoroughly explored but it would be premature to legislate on this question until the Trade Union Bill has become law. The Trade Union Act was passed in the Legislative Assembly in March 1926 and was brought into operation with effect from the 1st June 1927."

In August 1928 the Government of India published their second Bill making provision for the investigation and settlement of trade disputes and for certain other purposes. This Bill was introduced in the Legislative Assembly with a motion for circulation on the 1st September 1928. The Bill differed in several important respects in comparison with the Government of India's original Bill of 1924. The main part of the Bill falls into three parts. Clauses 3 to 14 of the 1928 Bill related to the establishment of tribunals for the investigation and settlement of trade disputes. This part of the Bill was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference was that, whereas the British Act sets up a Standing Industrial Court, the Conciliation Boards which the Bill proposed to establish were intended to be appointed *ad hoc* like the Courts of Inquiry in order to deal with particular disputes. The object of Courts of Inquiry which would ordinarily be composed of persons having no direct interest in the disputes would be to investigate and report on such questions connected with the dispute as might be referred to them. The objects of Boards of Conciliation which would ordinarily include representatives of the parties to a dispute would be to secure a settlement of the dispute. Provisions were made so as to enable both Courts of Inquiry and Boards of Conciliation to enforce the attendance of witnesses and the production of documents.

Neither party would be under any obligation to accept the finding of the Court or the advice of the Board and in cases where the dispute is not brought to an end during the deliberations of the tribunal that had been appointed reliance was to be placed on the force of public opinion which would be enabled by the publication of the report of the tribunal to arrive at just conclusions on the merits of the dispute.

The second part of the Bill consisted of clause 15 which related to public utility services. In accordance with the definition of "Public Utility Services" in clause 2 of the Bill, Clause 15 would be applicable to such railway services as would be notified by the Governor General in Council. The clause made it a penal offence for workers employed on monthly wages in public utility services to strike without previous notice and also provided heavy penalties for persons abetting such an offence. The clause was based on the principle that persons whose work was vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time had been given to examine the merits of their grievances and to explore the possibilities of arriving at a possible settlement. Provisions of a somewhat similar type already exist in the Indian Post Offices Act in a number of Municipal Acts in India, and the principle is one which is widely accepted in other countries.

Clauses 16 to 20 of the Bill contained certain special provisions relating to legal strikes and lock-outs. These clauses followed closely the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act 1927. They were to be applicable only in the case of the strikes and lock-outs which satisfied both of two conditions: in the first place the strike or lock-out must have other objects than the mere furtherance of a trade dispute within the industry to which the strikers or employers belonged and in the second place the strike or lock-out must be designed to coerce Government either directly or by inflicting hardship on the community. If these conditions were satisfied, the strike or lock-out would become illegal. Persons furthering the strike or lock-out were liable to punishment and would be deprived of the protection granted to them by the Indian Trade Unions Act while persons refusing to take part in it would be protected from Trade Union disabilities to which they might otherwise be subjected.

The motion for circulation was adopted in the Legislative Assembly and the Bill was circulated to all Local Governments for opinion. Some Provincial Governments recommended that questions connected with picketing and intimidation of the type which were entirely responsible for the undue prolongation of the general strikes in the cotton mills of Bombay City of the years 1928 and 1929 and the rioting in Bombay in the year 1929 should also be covered. The Bill was referred to a Select Committee of the Legislative Assembly in February 1929.

The Select Committee decided to limit the duration of the Act to five years. In connection with the definition of the term *Public Utility Services* they were of the opinion that the wide power enabling the Government to declare any industry business or undertaking to be a public utility service was undesirable as well as unnecessary and the provision made for this in the draft Bill was omitted. Various proposals designed to lay upon the Government a definite obligation to convene a Court of Inquiry or a Board of Conciliation in cases where one of the parties so required were considered. But the Committee thought that unless both parties were agreed in desiring a reference it would be useless to fetter the discretion of the Government as to the time at which the matter was reported for action under clause 3. At the same time they held that no option should be left to the Government to refuse to appoint a Court or Board where the Government was assumed that both parties were agreed as to the necessity as well as to the form which it should take. They therefore considered it necessary to provide that in every case a Court of Inquiry, where it consisted of one or more persons should not include persons having an interest in the dispute or in any industry affected by it, and in this connection the Committee proposed a further definition of the term *An independent person*. The clause relating to the publication of the findings of Courts and Boards was maintained on the lines of the English Act so as to make it quite clear that every report of a Court or Board whether final or interim, must be published and that only the publication of such information or evidence as the appointing authority thought fit should be left to its discretion. It was considered inadvisable to forbid the representation of parties before Courts and Boards by legal practitioners subject only to exceptions and they redrafted the clause in such a manner as to permit that such representation would ordinarily be permissible subject, however, to such conditions and restrictions as might be provided by the rules.

The Select Committee accepted the principle underlying the clause in connection with strikes in public utility services but they held that the clause as originally drafted was open to certain criticisms. For example, it was pointed out that many persons are actually employed upon a daily wage which is in practice paid monthly also that the clause as provided would appear to penalise abstention from work on the part of a particular individual and further that the clause was one-sided and inflicted no penalty upon an employer who locks out his workmen. The latter point was considered as one which should certainly be met as by the nature of his employment a casual or day-to-day labourer must be entitled to cease work at any moment and be similarly liable to dismissal and it was agreed that he should therefore be excluded altogether from the operation of this clause. The Committee adopted a suggestion made by the Government of Bombay which made it clear that the cessation of work must be in the nature of a strike as defined in the Bill and it was provided that in order to render it a penal offence the strike must be in breach of a definite contract between the employer and the workmen. The Committee added a collateral provision penalising

an employer for locking out his workmen in breach of any contract. The Committee adopted the clause in connection with illegal strikes but with some amendments which in their opinion would restrict the scope without materially impairing its effectiveness. In sub-clause 2 of this section they made it clear that for the application of money to be illegal it must not merely tend to further or support the strike, but have the direct effect of so doing. This was intended to exclude a case in which money is spent upon the relief of the dependants of strikers. A further sub-clause borrowed from a similar provision from the English Act of 1927 explaining the circumstances in which a group of workmen should be deemed to be within the same trade or industry was added. The penalties provided for the instigation of an illegal strike were modified. With regard to clause 20 of the draft Bill, the Committee held that there was no sufficient justification for giving an option to the Government to apply for injunctions restraining the exercise of the funds of a Trade Union in connection with an illegal strike. It was considered that under clause 16 such expenditure had been declared illegal and the persons properly interested in seeing that the funds were not mis-spent are the members of the Trade Union concerned. The Committee were of the opinion that the Bill had not been so altered as to require republication and they recommended that it should be passed as duly amended by them.

The Select Committee as such did not deal with the question of making provision for picketing and intimidation in their report but in a minute of dissent Sir Victor Sassoon Bart., stated that the alteration of the law relating to picketing was one for which, in his opinion, the time was ripe. Picketing of any kind should be rendered illegal while a Court or Board is sitting and the law on picketing at any time should be altered to render it illegal at or near a workmen's home as under the English Law. There appeared to be some doubt as to whether legislation of this kind should take place in this Bill or by an Amending Bill to section 503 of the Indian Penal Code. It had been stated that if an amendment of this kind were passed in the Select Committee it would delay the Bill. As he did not desire to delay the acceptance of the provisions of this Bill he did not press the point which was raised by other members of the Select Committee. Sir Victor Sassoon however, thought that suitable action should be taken by Government either when the Bill came up before the House or by bringing out an amending Bill to the Indian Penal Code to deal with this most important and necessary point. The action taken by the Government of Bombay in connection with the passing of an Intimidation Act has been dealt with in the chapter on Industrial Disputes.

The Bill as amended by the Select Committee was passed by the Legislative Assembly on the 8th April 1929 without any change and received the assent of the Governor-General on the 12th April 1929.

During the period of three and a half years for which the Act has been in operation, it has only been made use of on three occasions.

once by the Government of Bombay when they appointed a Court of Enquiry in the year 1929 to enquire into the general strike in Cotton Mills in Bombay City in that year and twice by the Government of India who appointed a Board of Conciliation in 1930 in connexion with a dispute in the Bombay, Maroda and Central India Railway which arose over the question of the transfer of a number of workmen from the Railways workshops in Bombay to the new workshops which they were starting in Dohad and another Court of Enquiry in 1931 to enquire into and report on the grievances of the large numbers of workers who were retrenched on all Indian Railways during that year.

Royal Commission's Recommendations.—The Royal Commission on Indian labour were of opinion that some statutory machinery will be permanently required to deal with trade disputes and that it will be necessary to consider the form which such machinery should take before the Trade Disputes Act expires in 1934. They recommend that the possibility of establishing permanent courts in place of *ad hoc* tribunals under the Act should be examined and also that the question of providing means for the impartial examination of disputes in public utility services should be considered. The Government of India have noticed these recommendations for consideration when the time

comes to replace the Trade Disputes Act of 1929 next year. The Commission also recommended that Section 13 of the Trade Disputes Act should be amended so as to provide that no prosecution or suit shall be maintainable on account of any breach of the section or any damage caused thereby except with the previous sanction of the Government which appointed the tribunal. Act XIX of 1932 giving effect to this recommendation was passed by the Indian Legislature in September 1932.

With regard to the action which should be taken by Provincial Governments the Commission recommended that in the remaining period for which the Trade Disputes Act will be in operation Governments should lose no opportunity of utilising their power to appoint Boards or Courts when they believe that this action will serve some useful purpose. They also recommended that every Provincial Government should have an officer or officers whose duty it would be to undertake the work of conciliation and to bring the parties privately to agreement. The Commissioner of Labour in Madras, the Director of Industries in the Punjab, the Director of Statistics and Labour Commissioner in Burma and Deputy Commissioners and the Director of Industries in the Central Provinces have already been entrusted with powers as Conciliation Officers.

INDIA AND INTERNATIONAL LABOUR CONVENTIONS.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve the conditions in their own countries. In order to establish universal peace based on social justice the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be of special and urgent importance but also brought into being the International Labour Organisation which was entrusted with the task of securing as far as practicable the observance of these principles. The International Labour Conference has been discussing various questions connected with industrial, agricultural and maritime labour since 1919 and has recorded its findings in conventions and recommendations. The Conventions and Recommendations adopted by the Conference are not automatically binding on the State Members but they have to be submitted to the Legislature of each country and this secures the regular examination both by the Executive Governments and the Legislature of schemes which international opinion considers necessary and desirable for the amelioration of labour conditions. During the sixteen Conferences that have been held 33 Conventions have been adopted. Out of these the following thirteen have been ratified by India—

- 1 Hours of work (1919)
- 2 Unemployment (1919)
- 3 Night work of Women (1910)

- 4 Night work of young persons in Industry (1919)
- 5 Rights of Association (Agriculture) (1921)
- 6 Weekly Rest in Industry (1921)
- 7 Minimum age of stokers and trimmers (1921)
- 8 Medical Examination of Young Persons employed at sea (1921)
- 9 Workmen's Compensation (Diseases) (1925)
- 10 Liability of Treatment (Accidents) (1925)
- 11 Inspection of Emigrants on board ship (1926)
- 12 Seamen's Articles of Agreement (1926)
- 13 Weight of Packages transported by vessels (1929)

In addition to the Conventions dealt with above, the International Labour Conferences have also adopted numerous Recommendations.

The Sixteenth Session of the International Labour Conference held at Geneva in April 1932 adopted a Convention in respect of the minimum age for employment in non-industrial occupations and another in connexion with the question of Protection against accidents (Workers). It also adopted recommendations in connexion with both these subjects.

GOVERNMENT ADMINISTRATION

During pre Reform days Labour was not a question to which the Central or Provincial Governments in India gave the same attention as they did to such subjects as education, health or justice. After the amendment of the Indian Factories Act of 1901 in 1911 the appointment of the Indian Industrial Commission in May, 1916, may be considered to be the first milestone in the progressive interest taken by Government in questions connected with labour. The active participation of India in the Great War led to the creation of an unprecedented opportunity and the emergence of an unprecedented need for a definite industrial policy for India as a whole. The examination of various industrial questions by the Industrial Commission included, to a certain extent the examination of questions connected with labour as well. Previous to this date no provincial or All India inquiries of a general character were held into conditions of labour with the exception of some quinquennial censuses into agricultural wages. No information was available in 1919 as to the rates of wages which were paid in industry, and for that matter, very little information in this direction is available even to-day. Indian labour secured its first opportunity with her participation in the signing of the treaty of peace and her becoming a live member of the international community of nations. The participation by India in the first International Labour Conference held at Washington in the year 1919 made it necessary for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the Central and Provincial Legislatures but also to allocate to special departments or offices the administration of labour questions.

Under the Devolution Rules (Schedule I Part 2, Rule 24) industrial matters included under the heads factories and welfare of labour fall within the scope of the provincial legislatures. Under the same rules regulation of mines and "inter provincial migration are central subjects. A Labour Bureau was established by the Government of India in the year 1920 but it was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The administration of labour matters since then has been in the hands of the Department of Industries and Labour with a Member of the Viceroy's Council holding the portfolio. Amongst Local Governments, the Bengal and the Madras Presidencies were the first in the field for the creation of special Labour Officers, but it was the Government of Bombay who took the lead in the field for the creation of a proper Labour Office for the collection and compilation of all kinds of statistics in connexion with prices, cost of living, wages, etc.

Bengal.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws were to be administered in the Commerce Department, but the Revenue Department continued the administration of the Assam

Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency and also the number of labour organisations. From time to time, as circumstances permitted, he was to conduct special inquiries. He was however, not provided with an adequate staff for the purpose. The Labour Intelligence Officer is also the Deputy Secretary to the Government of Bengal in the Commerce Department and since the bringing into effect of the Indian Trade Unions Act, 1926, he has also been appointed Registrar of Trade Unions. The Royal Commission on Indian Labour have recommended that Bengal should have a properly staffed Labour office on the same lines and with at least the same staff as the Labour office of the Government of Bombay.

Madras.

The Government of Madras appointed a Labour Commissioner in the same year, viz., 1920, to watch and study at all times the conditions of labour particularly industrial labour throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them. In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case. He is also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Intelligence Officer, Bengal the Labour Commissioner in Madras has also no special statistical office to deal with labour statistics and no reports have been published of any special inquiries into questions connected with industrial labour in the Presidency. Since the creation of the Office the conduct of periodic censuses into agricultural wages is, however placed in his hands.

The Bombay Labour Office.

The real pioneer work in the field of labour information and statistics in India during the last twelve years has been done by the Labour Office of the Government of Bombay which was established in April 1921. In the Government resolution announcing the establishment of this office the following were declared to be its functions—

(1) *Labour Statistics and Intelligence.*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters.

(2) *Industrial Disputes.*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise, and

(8) *Legislation and other matters relating to labour.*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws.

When the Labour Office was first started it was placed in charge of Director of Labour. The post of the Director of Labour was however abolished in 1922 and at present the Officer in Charge of the Labour Office is styled the Director of Information and Labour Intelligence. He is also the Registrar of Trade Unions and the Commissioner for Workmen's Compensation. In addition to the Director, there are three other Gazetted Officers who are styled Investigators one of whom is in charge of the branch office at Ahmedabad. There are also three whole time lady investigators in Bombay. All investigators receive conveyance allowances. The office staff contains two Statistical Assistants, three senior clerks, eight junior clerks, two stenographers, one typist, one cashier, one despatcher, one daffar and five peons in Bombay and one peon in Ahmedabad. The activities of the office comprise (1) prices and cost of living, (2) wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the *Labour Gazette*, (12) library, and (13) office organisation.

The *Labour Gazette* has been published monthly from September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India. A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books the library contains bound copies of all the more important periodicals received from Labour Ministries, International organisations and research organisations in various parts of the world.

The Labour Office has conducted several special inquiries, the results of which have either been published in the form of special reports or as special articles in the *Labour Gazette*. Among the inquiries the results of which have been published in the form of reports are three inquiries into wages and hours of labour in the Cotton Mill Industry in the Bombay Presidency for the years 1921, 1923 and 1925, four reports of inquiries into family budgets three of which related to working class family budgets

in Bombay, Ahmedabad and Sholapur and the fourth to middle class family budgets in Bombay City. The remaining reports dealt with inquiries into agricultural wages in the Bombay Presidency, an inquiry into deductions from wages or payments in respect of fines and an inquiry into middle class unemployment in the Bombay Presidency. Other special inquiries related to wages of peons and municipal workers, welfare works rentals in Bombay and Ahmedabad, maternity cases among women operatives, methods of wage payments, creches, clerical wages in Bombay Presidency, incidence of sickness among cotton mill operatives in fact mortality, etc. In the *Labour Gazette* statistics are regularly published for working class cost of living index number for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay and Karachi, retail food prices for five important centres in the Bombay Presidency, for industrial disputes in the Bombay Presidency and for Workmen's Compensation prosecutions under the Indian Factories Act and the employment situation. A new working class index number has been compiled for Ahmedabad and statistics with regard to this have been published in the issues of the *Labour Gazette* since January 1930. A working class cost of living index number for Sholapur has also been published. Quarterly information is also collected with regard to all known Trade Unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months. The present staff of the Labour Office is as follows:—

Director of Information and Labour Intelligence, Commissioner for Workmen's Compensation, and Registrar of Trade Unions—Mr J F Gennings Bar-at-Law J P

Investigators—Mr S R Deshpande B Litt (Oxon) and Mr N A Mohrban B.A. F.S.S. Mr Mohrban is also assistant to the Registrar of Trade Unions Bombay Presidency.

Labour Investigator at Ahmedabad—Mr A Isengar B.A. LL.B.

Lady Investigators—Mrs K Wagh, Miss G Pimpalkhane and Miss S Dabholkar (These are non gazetted appointments.)

The Director of Information and Labour Intelligence has four offices under his charge: (1) The Labour Office, (2) the Information Office, (3) the Office of the Commissioner for Workmen's Compensation, and (4) the Office of the Registrar of Trade Unions. In the case of the Office of the Registrar of Trade Unions one Investigator of the Labour Office has been appointed as Assistant to the Registrar of Trade Unions and the office work is being done by a Statistical Assistant and a junior clerk from the staff of the Labour Office. The Information Office is under the administration of the Home Department. The Labour Office was under the administration of the Home Department till the year 1925, but it was transferred to the General Department and is now under the control of the Political Department. The Factories Office is under the immediate control of the Collector of Bombay and for administrative purposes under the Political Department.

Central Provinces.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Revenue Department deals with mines. The Department of Industries under the Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Societies and Registrar of Trade Unions. The Factory Office is under the general supervision of the Director of Industries. There is no special Labour Office or Labour Officer in the Central Provinces but the factory staff is utilised for collecting such information on labour questions as may be required from time to time. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board. But the Board acts purely in an advisory capacity.

Other Provinces

In Burma a Labour Statistics Bureau with a Special Officer in charge was set up in 1926. This Bureau has conducted an extensive investigation into the standard and cost of living of the working classes in Rangoon. The Report of which was published in 1928. In the Punjab the Director of Industries is the administrative officer for all acts concerned with labour. In the United Provinces almost all departments of the Local Government deal with labour questions. Labour as such is with the Home Member, electricity is with the Finance Member, the factory staff is under the immediate control of the Director of Industries who is under the Minister of Education and Industries and Boiler Inspection is under the Public Works Department. The Registrar of Co-operative Societies of the United Provinces has been appointed Ex officio Registrar of Trade Unions in the Province. In Assam the main question connected with labour is that concerning the recruitment of labour for the tea plantations from other provinces. As inter provincial migration is a Central subject, the Local Government are not very actively interested in the special consideration of other labour questions.

Representation on Legislatures.—The Government of India nominates one member for labour interests in the Legislative Assembly. Since the last reforms were brought into operation Mr N. M. Joshi, of the Servants of India Society, has been continuously nominated as labour member in the Legislative Assembly. In the Bombay Presidency the Local Government had provided one seat for labour and Mr S. K. Bose was nominated as the labour member in the first two Councils after the reforms. In 1927 the Local Government increased the number of seats for labour to three but the principle of nomination was maintained. The three persons representing labour interests in the Bombay Legislative Council at present are Messrs S. K. Bose, Syed Munwar and B. B. Bakhale. In the Central Provinces, Mr B. W. Fulay a Nagpur pleader, has been nominated as a representative of urban factory labour. In Bengal there have been two nominated members to represent labour interest since the introduction of the reforms.

The Assam Government reserves one seat for the nomination of a member to represent labour but it has been found impracticable to find any one who could adequately represent this constituency and therefore the seat is vacant in the present Assam Legislative Council.

Relation between Central and Local Governments.—It has already been stated above that under the Devolution Rules, factories, settlement of labour disputes and welfare of labour are reserved subjects. These subjects are, however, subject to central legislation. The provincial legislatures are not debarred from initiating legislation on these matters but they can only do so with the previous sanction of the Governor General in Council. The actual administration of the Acts passed by the central legislature under the above heads falls on the Local Governments who have to bear the entire cost of administration, as it is not permissible under the constitution to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps to some extent responsible for the opposition shown by some of the Local Governments to labour measures on which their opinions have been invited by the Government of India during recent years. The Governor General in Council exercises control over the administration of the Acts passed by the legislature in two ways. In the first place he is vested by Statute with the general power of superintendence, direction and control, and, secondly these Acts in most cases either reserve certain powers to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India has been to grant to the provinces as free a hand as possible in the administration of the various All India Acts.

Effect of differences in Law in Indian States and British India.—Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwalior and Travancore. Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the Factory Law in British India by establishing mills or factories in the territories of Indian States.

Recommendations of the Royal Commission.—The most important recommendation made by the Royal Commission on Indian Labour in connexion with Government administration of matters connected with labour is for the setting up of an Industrial Council which would enable representatives of employees of labour and of Governments to meet regularly in conference to discuss labour measures and labour policy. It is suggested that the Council should meet annually and its President should be elected at each annual session. The Secretary of the Council should be a permanent official responsible to it for current business. The functions of the Council would be (1) the examination of proposals for labour legislation referred to it and also to initiate such proposals, (2) to promote a spirit

of co-operation and understanding among those concerned with labour policy, and to provide an opportunity for an interchange of information regarding experiments in labour matters, (3) to advise the Central and Provincial Governments on the framing of rules and regulations and (4) to advise regarding the collection of labour statistics and the co-ordination and development of economic research. If Labour Legislation is made a Central subject in the new constitution of India, the Royal Commission recommend that the authority finally responsible for such legislation must be the Central Legislature. If Labour legislation is to be decentralized some co-ordinating body will be necessary. The decisions of the Council could not be given mandatory power but in certain circumstances it might be made obligatory for Provincial Governments within a specified time to submit proposals for legislation to their respective legislatures for a decision as to their adoption or rejection.

The Commission recommended that Labour Commissioners should be appointed both for the Central and in all the Local Governments except Assam. Labour Commissioners should be selected officers who should hold the appointment for a comparatively long period. They should be responsible for the publication of labour statistics, should have the right to enter all industrial establishments and should be generally accessible both to employers and labour and should act as conciliation officers. Where there is danger of establishments being transferred to

Indian States in order to escape regulation, an effort should be made to obtain the co-operation of the adjoining states. The Commission also recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration and that if federal legislation is not practicable efforts should be directed to securing that, as early as possible, the whole of India participates in making progress in labour matters. For States in which there is appreciable industrial development, the Industrial Council should offer a suitable channel for co-operation.

With regard to the question of representation of labour on the legislatures the Royal Commission recommended that if special constituencies are to remain a feature of the Indian constitution labour should be given adequate representation in the Central and Provincial legislatures. The method which is most likely to be effective in securing the best representatives of labour is that of election by registered trade unions. A special tribunal should be set up in each province to determine before election the weight which should be given to each registered trade union. The question was examined by the Indian Franchise Committee and so far as the Provincial Councils are concerned the communal award of His Majesty's Government has given effect to the Labour Commission's recommendation. The Franchise Committee recommended a combination of trade union constituencies and special constituencies.

COPYRIGHT

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights, but the printer has to supply copies of these works as stated in that Act and in the Printing Presses and Books Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting the Imperial Act to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptations of them to Indian law and procedure, and some material

modifications of them in their applications to translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provision of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, "have not been published, i.e., written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, printed, reduced to notes, or otherwise graphically produced or reproduced."

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly proposed for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials, or 'chits,' and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin, for the old Prussian Servants Ordinances (*Gesindeordnung*) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in Ceylon. The act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word 'servant' means and includes head and under servants, female servants, cooks, coachmen, housekeepers and house and garden cooies. The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the Island or for any town or district, to which the Ordinances is made applicable, a registrar of domestic servants, who is to be under the general supervision and control of the Inspector-General of Police. A registry is kept by the registrar of all domestic servants employed within his town or district, and he has to enter therein the names of all the servants, the capacities in which they are employed at the time of such registration, the dates of their several engagements and such Memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the creditability of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service the registrar may grant him "provisional" registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether, but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry in given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various penalties of fine as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the Straits Settlements, where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to derive the benefit of the provisions.

INDIAN TRAIN SERVICE

The distances and railway fares from Bombay to the principal centres of other parts of India are as follow —

	Miles	1st Class	2nd Class
		Rs. & p.	Rs. & p.
Delhi B B & C I Railway, via new Nagda Muttra direct route	865	83 4 0	44 2 0
Delhi, G I P Railway, via Agra	957	88 4 0	44 2 0
Simla, via Delhi	1,220	125 14 0	68 6 0
Calcutta, G I P, from Bombay, via Jubbulpore & Allahabad	1,549	130 15 6	65 8 6
Calcutta, G I P, from Bombay, via Nagpur	1,223	123 1 6	61 9 6
Madras, G I P, from Bombay, via Raichur	794	90 2 0	45 1 0
Lahore, via Delhi	1,168	120 13 0	60 6 0

CIVIL AVIATION.

Civil Aviation in India is under the control of the Director of Civil Aviation whose newly instituted Department, like the Department of Posts and Telegraphs comes within the portfolio of the Member of the Executive Council of the Governor-General for Industries and Labour. The present holder of the appointment is Lt-Col F C Sheldermine O.B.E. Eight Indians are now under training in England with a view to their future employment in the Civil Aviation Department as Aerodrome Officers Inspectors of Aircraft and Engines etc. These men are not being trained primarily as commercial pilots, but it is possible that some of them, if they show special aptitude and desire to adopt a pilot's career, may receive further training with this object in view. All of them receive a certain amount of training as pilots and they also go through a post-graduate course at the Imperial College of Science and Technology and periods of attachment to selected aircraft works and to the London Terminal Aerodrome at Orlydon. The course lasts for two years and three months during which time the men receive scholarships amounting to £ 240 per annum. A condition of eligibility for these scholarships is that applicants must possess a B.Sc. degree in Engineering or Physics.

An Indian State Air Service between Karachi and Delhi was inaugurated as a weekly service in each direction on 30th December 1925. It was until 31st December 1926 operated by aircraft chartered by Imperial Airways Ltd., under an agreement which is operative for two years. It runs in connection with the air mail between Karachi and England. Since 17th May 1927 the Delhi Flying Club has conveyed the Karachi Delhi Air Mails. It was hoped to extend this service to Calcutta and to Rangoon in the near future. The need for retrenchment has hung up this development. Steps are being

taken for completing the Indian section of an All British Air Service from England to Australia and they will probably be completed during 1931. Messrs Tata Sons & Co., Bombay, are contracting with Government to run a Karachi Bombay Madras air mail line with a possible extension to Colombo.

Instruction in aviation is given in India only through Clubs founded for the purpose. There are eight of these. Above them is the Aero Club of India and Burma which exercises control and general co-ordination of activities under the Director of Civil Aviation with the Government of India. The eight instructional Clubs are the Delhi, U.P. Benjal Madras, Bombay Katidwar Karachi Jodhpur A Punjab Flying Club at Lahore lost its three aeroplanes in crashes and had to wind up. It is hoped to form a Northern India Flying Club at Lahore and a C.P. and Berar Flying Club at Nagpur during the 1933-34 cold weather.

The movement dates from March 1927, when as a result of the interest taken in the subject by Sir Victor Sassoon, Bt. M.L.A. it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month the Aero Club of India was formed, composed of about 40 members of the Assembly. Its first meeting was held in Simla in September of the same year and during the next three months 100 more members of the Assembly and 197 other members joined. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilize the Government grants which were at this time proposed and the formation of local clubs followed. The Aero Club entered into an agreement with the Royal Aero Club of Great Britain and thereby became its official representative in India and Burma.

The Government of India in December, 1927, received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club formed, he would bear any deficit between the Club's income and expenditure until the grants became available. This they agreed to and they further announced that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. These grants commenced as from 1st April 1928 and were to continue for two years. Agreements were entered into between the Secretary of State and the Aero Club and between him and the provincial clubs, laying down the conditions of financial assistance. Moth aeroplanes manufactured by the De Havilland Aircraft Co were selected as the

training machines. Eight of these arrived in December, 1928, and training with them began in January, 1929.

When the proposal of an Indian State air service was in 1931 for reasons of financial stringency, temporarily abandoned. H. E. the Viceroy had bought for him one of the Avro X 3 engine monoplanes ordered for it. His Excellency and Lady Willingdon regularly use the machine for touring and are thereby giving a great stimulus to private flying in India.

The first Indian air race was flown over a Delhi Agra Jhansi Lucknow Agra-Delhi course in February, 1932 and was very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

THE SUEZ CANAL

The directors of the Suez Canal Company decided to declare the following dividend for the year 1931—

	Gross	Net	
		Bearer	Regd
	Francs	Francs	Francs
Capital shares	605	486 04	507 78
Journance shares	543 44	417 47	456 06
Founders shares	612 82	475 95	513 73

The increased difference between the gross and net figures is due to the adverse judgment delivered by the Egyptian Court of Appeal last year.

The report which was placed before the shareholders meeting on June 8, 1932, showed that

the total revenue was 979 877 488f which is 118 670 032f less than for 1930 but that expenditure fell by 18 543 884f to 206 483 418f. The report stated that the excellent condition of the canal made it possible to achieve a very considerable reduction in maintenance charges and that the expenditure under this head should be even less during the current year. For the same reason appropriations for development were reduced to 10 000 000f while the contribution to the sinking fund which already covers the value of the present equipment was withheld. On the other hand, 80,000 000f had been placed to the insurance and contingencies account in order to allow for the currency difficulties of the past year.

There was a balance of receipts over expenditure of 564 794 833f compared with 714 484 291f for 1930 to which had to be added 1 436 349f brought forward. Finally the directors decided to have recourse to 50 000 000f of the special reserve of 60,000,000f built up during the depreciation of the franc, making a total sum available for distribution of 612,326 760f (718 300 859f in 1930) after allowing for 3 904 422f to be carried forward.

The following table shows the dues the traffic through the Canal, and the dividends paid by the Company over the last ten years —

	Dues		Year	Dividends	Traffic Thous
	Laden	In Ballast			
March 1, 1920	8 50	6 90	1920	£ 00 2,173	net tons 17 575
Oct 1 1920	8 25	5 75	1921	2 201	18,119
Oct 1 1921	8 00	5 50	1922	2,076	20,743
March 1, 1923	7 75	5 25	1923	2 398	22 730
Jan 1 1924	7 50	5 00	1924	2,605	25,110
April 1 1925	7 25	4 75	1925	2,150	26 761
April 1 1926	7 00	4 50	1926	3 501	26 060
Jan 1 1929	6 90	4 40	1927	3 712	28 962
Sept 1 1930	6 65	3 32½	1928	4 148	31 906
			1929	4 301	33 466
			1930		31 609

The dues were fallen gradually but the reduction over the whole period amounts to only 20 6 per cent. whereas since 1923 the dividends have grown rapidly, with only one interruption. The traffic also grew steadily, apart from the setback in 1926, until 1929.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1 ft., making it 30 ft. English.

The maximum permissible draught of ships using the Canal was 24 4 feet in 1870, in 1890 ships drawing 25 4 feet could make the passage, and during the following 26 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Committee of Works, the British representatives on which are Sir William Mathews and Mr Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 Feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches, in June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of

147 feet 6 inches over a length of about 35 miles, and to a width of 328 feet over a distance of about 30 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2 700 yards at a cost of over £5,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the protection of the entry to the Canal were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were as a matter of fact, completed to a length of 2,500 metres, and cemented blocks were laid for 1,040 metres, and cemented for over 800 metres. The protection of the Channel is thus secured, and there is no need of any apprehension as to its future.

Travel in India

Thirty years ago a tour in India was possible only to the wealthy, the leisureed and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow, and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. It is also possible to reach Bombay in 11 days from Genoa or Venice by means of the Lloyd Triestino line. A dozen lines have covered the sea route between Europe and India and Ceylon with a plethora of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe and the Indian hotel has grown into a really comfortable caravanserai.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and via Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century the import and export trade of India has largely passed. Ash purple against the dawn, the spurs of the Western Ghats, thrones of mystery stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every schoolboy knows the story of the Marhatta campaigns, they are but one—the Marhattas—of the races within races that populate this vast country where two hundred and twenty-two different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the mullahs announcing that God is Almighty and Mohammed is his Prophet, the song of the Sharnas, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness there is no region in all the world so full of vivid colour, of populous cities of buildings designed by master architects of bygone days, of diverse races, of absorbing subjects for study and

observation such as the customs, religious philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist India can offer every charm in forest, mountain, valley, cultivated plain and wild waste.

To the sportsman, it can furnish sport such as few countries can give: the tiger in the forest, the great mahseer in many rivers, the wily snipe on the flets, the strong winged duck, the jinking pig and many another kind.

To the mountaineer the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician India presents a scene of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway via the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B. & C. I. Railway via Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaisalmer to Agra and Muttra. If you decide to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmans and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north Gwalior is reached, the great Fort of Gwalior has been described by Ferguson as the most remarkable and interesting example of a Hindu palace of an early age in India. Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the Taj Mahal. Generations have come and gone since that far day when that most splendid of emperors, Shahjahan, bowed his head before his wife's coffin in the vault of the finished Taj. The building is better known than any other in the world. Visit it by moonlight and later by

daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air of buoyant cupola and climbing campanile. Here is grandeur as well as beauty.

The Taj Mahal however is only one of the many interesting sights of Agra and its Fort. It is said to be a Tomb. Akbar's Tomb, 5 miles from Agra and Fatehpur Sikri, the deserted city of Akbar about 25 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour of proud and noble dignity or with a more sovereign grace, crowns its red bastions with so wonderful a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1585 A.D. on a lonely eminence Akbar founded his city and there began to rise as if by magic those great battlemented walls the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi the capital of India, in days gone by and now the Imperial Capital of India has no rival in greatness as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthrall him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghul Period at its zenith as he wanders with untried feet in the great courtyard of the largest mosque in India, the Jama Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mughals, Hindoos, and a house, the Kashmir Gate beneath which some still

salute dead Home and Balkhad as they pass the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbur.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar 238 feet in height erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi the eighth city of Delhi is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firuzabad, Ferozabad, and Shahjahanabad the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rajputana then you will see another but equally interesting side of India. Rajputana the land of chivalry attracts the visitor as few places do. Alone at Udaipur is there in its perfection, the fairy palace of one's childhood, just such a long cascade of marble terraces and halls falling into the waters of a mountain encircled lake as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpieces of Jain architecture contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivory, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab, the Land of the Five Rivers which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jalpur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babur the founder

until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming barmans where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the world. South India is a land of temples full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings far higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahabharata, a minotaur or buffalo headed monster by Chaimundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian State situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Srirangapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At Madras and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madras has been aptly described by European scholars as the Athens of South India, and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in

the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

No one visiting India should miss the opportunity of seeing Burma for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby whatever be your interest be it sport, history, ethnology or botany or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon the capital is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda, visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India. Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos Cook & Sons, the American Express Co., Cox & Kings (Agents) Ltd, Army & Navy Stores, Grindlay & Co. etc., and the Publicity Officers of all the more important Railways as well as the Manager Indian Railways Publicity Bureau, 57, Haymarket, London, and the Resident

Manager Indian Railways Publicity Bureau
Delhi House, 38 East 57th Street New York
will work out tours to suit the convenience of
individual parties. Many of the leading tourist
companies will also arrange for inclusive and
conducted tours. There are certain places,
which are very well known such as Delhi, Agra,
Benares, Darjeeling, Jaipur, the Khyber Pass,
Kashmir and Mysore, but there are innumerable
other places almost as well known containing
sights which cannot be equalled in other parts.

of the world. Puri, Lucknow, Amritsar,
Udaipur, Mount Abu, Gwalior, Rillora and Ajanta
Caves and Madura are a few of them while in
Burma, Mandalay and, the famous old cities
of Ava and Amarapura nearby are well worth
a visit.

A selection of itineraries for long and short
tours in India and Burma is given below.
These show what can be seen in certain periods
of time but they can be varied to suit individual
parties or taken in the reverse direction.

Tour No 1—4 weeks—Bombay, Udaipur, Jaipur, Peshawar, Lahore, Amritsar, Delhi, Agra,
Cawnpore, Lucknow, Benares, Darjeeling and Calcutta.

Alternatives (a) Puri and Konarak in place of Darjeeling

(b) Gwalior, Sanchi, Rillora and Ajanta Caves in place of Jaipur and Udaipur

	1st	2nd	Servants 3rd
Total fare (approximate) on the basis of return tickets at 1½ single fares Calcutta—Darjeeling and Delhi—Peshawar	Rs 361-8 £ 27 \$ 120	186-4 14 62	65-3 5 20

Tour No 2—2 weeks—Bombay, Udaipur, Jaipur, Delhi, Agra, Gwalior, Sanchi and Bombay
Alternative Benares in place of Gwalior and Sanchi

	1st	2nd	Servants 3rd
Total fare (approximate)	Rs 192 £ 15 \$ 60	96 7-10 34	32 2-10 11

If the alternative is taken the fares are increased by about one quarter.

Tour No 3—1 week—Delhi, Lahore, Amritsar, Peshawar and Delhi

	1st	2nd	Servants 3rd
Total fare (approximate) on basis of return tickets at 1½ single fares	Rs 90 £ 7 \$ 25	40 3-10 13	18 1-6 4

Tour No 4—10 days—Bombay, Poona, Mysore, Madras, Trichinopoly, Madura and Colombo

	1st	2nd	Servants 3rd
Total fare (approximate)	Rs 212 £ 18 \$ 66	107 9 34	39 3 12

NOTE—If extra time can be allowed at Mysore, Srirangapatna, Gersoppa Falls and Ootacamund
can be visited.

Tour No 5—2 weeks—Colombo, Madura, Madras, Mysore, Ootacamund and Colombo

	1st	2nd	Servants 3rd
Total fare by train (approximate)	Rs 222 £ 20 \$ 63	124 10 32	45 3-10* 11

NOTE—An interesting trip can be made after leaving Ootacamund viz Cochin where the white
Jews live along the backwaters to Alleppey and Quilon by motor launch and motor car down to
Trivandrum the capital of Travancore by train, and by motor car to Cape Comorin, the southern
most point of India and, back via Trivandrum and Madura to Colombo. This would take about
seven days.

* Motor Mysore-Ooty from Rs 75 additional per car.

Tour No 6—1 week—Rangoon Mandalay Gokteik Viaduct Mandalay—Rangoon

	1st	2nd	Servants 3rd	Revised fare by rail
Total fare (approximate)	Rs 70 £ 5 \$ 25	35 3 13	12 1 4	1st ret 102 3-0 2nd „ 51 2-0 3rd „ 17 2 0

NOTE.—Many interesting trips off the beaten track can be made in Burma but special arrangements are necessary

For any visitor landing in Calcutta, it is possible to visit Benares, Agra, Delhi, Jaipur, Bombay, Mysore, Madras, Trichinopoly and Madras and still reach Colombo on the 14th day, but this entails sightseeing by day and travelling most nights and is not recommended for the ordinary visitor. A very attractive tour can however, be worked out for a similar trip over a period of four weeks either allowing more time at the more important places or including other of the places mentioned in Tours 1 and 4 such as Darjeeling, Puri, the Khyber Pass, Lahore and Amritsar, Udaipur, etc.

Travelling in India is not expensive when

the long distances travelled are taken into consideration. The first second and Indian servants fares are shown at the end of each tour. Hotel expenses average about Rs 15 (22/6 or 5½ dollars) per person a day except when special rates are charged during certain special periods, while a motor car for the day can be hired for Rs 20 to Rs 30 (38/6 to 45/6 or 9 or 11 dollars) a day in most places, except when long distances have to be covered. Where the distances are short, tongas and two-horse landaus can be used and the daily charges vary from Rs 3-8 to Rs 9 (5/ to 15/6 or 1½ to \$4 dollars). Guides with a good knowledge of English can be obtained from Rs 5 to Rs 10 (7/6 to 15/ or 2 to 4 dollars) a day.

HOTELS IN INDIA, BURMA, CEYLON AND MALAYA.

Hill Stations

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride walk, play tennis and golf or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order—

Darjeeling (8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round, that is, it is neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri a journey of 10 hours. From Siliguri the journey is completed either by motor or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest the Grand (Rockville) and the Park.

Kangra Valley—The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaul Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow gauge railway running between Pathankot and Jogindernagar in Mandi State. Places to stay at are Dalhousie, Dharmasala and Kangra. The best hotels at Dalhousie are Stiffes Grand View and the Arramoor, and at Dharmasala the Switzer's.

Kashmir—Perhaps the most famous beauty spot in the world can be reached by taking train (either G. I. P. or B. & C. I.) from Bombay to Rawalpindi (about 48 hours) whence the remainder of the journey is accomplished by motor. The average height of the valley is about 6,000 feet, and it is entirely surrounded by the lofty, snowy outer ranges of the Karakoram and Himalaya. Visitors usually stay either at Srinagar or Gulmarg. At Srinagar one can live at Nodou's Hotel or in boarding houses, or one can hire a houseboat and live on the River Jhelum. At Gulmarg Nodou's is the only hotel. As at Srinagar visitors usually take up their quarters in wooden huts rented through the Srinagar agencies or in tents.

Kodaikanal (7,000 ft.)—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern side of the Palni Hills overlooking the plains. Reached by metre-gauge from Madras to Kodalkanal Road and thence by a 4 hours motor run. The Carlton is the principal hotel. There are also boarding houses.

Matheran (2,500 ft.)—The nearest hill station to Bombay ideal for walkers and any body wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay to Neral (about 1½ hours) whence Matheran may be reached by hill railway (2 hours) or by pony rickshaw, or on foot by a good walker. Stay at the Rugby Hotel.

Mahabaleshwar (4,500 ft.)—Until recently, when expenditure had to be cut down the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahabaleshwar. Mahabaleshwar is noted for its delightful vegetation, orchids and lilacs bloom in April and May. Hotels—Race View and Frederick.

Mount Abu (4,500 ft.)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archaeological excursion. Reached by B. E. & C. I. trains to Ahmedabad thence by metre gauge to Abu Road whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms permission to use which must be obtained from the Assistant Engineer, P. W. D., Mount Abu.

Murree (7,000 ft.)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 87 miles by car. The principal hotels are the Cecil and the Viewforth.

Mussoorie (7,500 ft.)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G. I. P. or B. E. & C. I. trains to Dehra Dun a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Cecil, Charleville, Hackman's Grand and the Savoy.

Naini Tal (6,500 ft.)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. E. & C. I. train to Muttra, thence by metre-gauge to Katigodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G. I. P. train to Lucknow and then change over to the metre-gauge railway. The Grand, Metropole and Royal are the best hotels.

Ootacamund—Familiarly known as Ooty is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees. Ootacamund is the administrative centre of the District and the seat of the Madras Government for six months of the year.

from April to September. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours or by taking train to Mettupalayam *Via* Madras and thence by hill railway to Ootacamund. The principal hotels are the Savoy and Cecil.

Pachmarhi (3 500 ft.)—Situated on a plateau in the Mahadeo Hills, is the summer quarters of the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G I P railway to Pipariya *Via* Jabulpore and a two hours' motor journey. The best hotel on the Hill.

Simla (7,000 ft.)—The summer headquarters of the Government of India. Is situated on several small spurs of the lower Himalayas. Towards the end of September and in October and November Simla enjoys the best climate in the world. Reached from Bombay by taking G I P or B B & C I train to Kalka and thence either by hill railway or motor. There are many good hotels and boarding houses. The leading hotels are the Cecil, Clarks, Concorde, Grand, Gables (at Mahabira) and Wildflower Hall (Mahasu).

CLIMBING IN THE HIMALAYAS

The Asiatic mountains have as yet been little climbed, though those that lie within the British Empire have been surveyed. Of the many challenging mountains in the Himalayas the three highest peaks are Everest, Kangchenjunga and K2, and though there is a difference of opinion about their heights Everest is generally taken to be less than a thousand feet higher than K2. Mount Kamet on the contrary is over three thousand seven hundred feet lower than Everest, being about 25 431 feet. Though considered by some to belong to the Everest group, it is really in Garhwal, over 500 miles west of Everest. In 1892 Sir Martin Conway explored the Karakoram Himalayas and climbed a peak of 28 000 feet. In 1905 A. F. Mummery was lost while exploring Naaga Parbat. In 1899 D. W. Freshfield journeyed to the snowy region of Sikkim and in 1899, 1903, 1906 and 1908 Dr. and Mrs. Workman made numerous ascents in the Himalayas including one of the Nun Kna peaks (23 300 ft.). A number of Gurkhas trained in mountaineering by Brig Gen. C. G. Bruce have done good service to many explorers.

In 1907 C. G. Bruce, T. G. Longstaff and A. L. Mummery explored the mountains of Garhwal and Kumaon and Longstaff with two companions ascended Trisul (23 406 ft.). Useful work was accomplished by the Workmans during 1911 and 1912 in the Karakoram, by C. F. Meade in the Garhwal Himalayas by Mr. and Mrs. Visser by Kailas (who reached a height of 22 700 feet on Kangchenjunga), and Major H. D. Minchinton who lost his life in the Himalayas in 1927. did good work in 1920 while on a survey expedition to the Shasegam district.

The fourth attempt to reach the summit of Kangchenjunga was made in 1930 an expedition remarkable in that it included mountaineers from four nations, Germany, Austria, Switzerland and Great Britain being represented under the leadership of Professor G. Dviurenfurth. Though that expedition was beaten by Kangchenjunga's impregnable defences and terrible ice-avalanches, Herr Schneider and Mr. Smythe were successful in gaining the *virgin summit* of the Ramthang Peak, (23 000 feet) after crawling along knife-like edges of ice. More thrilling perhaps was the conquest of the Jonsong Peak

(24 344 feet) which was only once before attacked but without success.

In the summer of 1931 a party of young British climbers led by Mr. F. B. Smythe succeeded in reaching the summit of Mount Kamet (25 413 ft.) the highest mountain peak though not the highest altitude ever reached by man.

A description of the attempts to climb Mount Everest the highest mountain in the world may be divided under three headings: the reconnaissance expedition of 1921 the first attempt in 1922 and the second in 1924. A still further attempt is being made at the time of writing in April 1935.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest, carried out its work in the most complete manner under the leadership of Lt. Col. O. K. Howard Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with all the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organized and set off the following year under the leadership of Brig Gen. the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27 300 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig Gen. Bruce. Lt. Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28 200 feet. Then a final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. B. Odell and J. de V. Hazard. On June 8th they left the 20,000 feet camp with three porters who carried loads for them up to 27 000 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 27 000 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt Col J L E. Weir Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An Everest Committee was formed under the aegis of the Royal Geographical Society and the Alpine Club and Mr Hugh Rutledge, formerly of the I.C.S. accepted its invitation to take charge of an expedition included in it as members were Mr F S Smythe leader of the successful Kamet Expedition of 1931 and Capt J. St J. Hinde Sam Browne's Cavalry who participated in the last preceding Everest Expedition and climbed Kamet with Mr Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

An interesting aside to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major F V S. Blacker formerly of the Guides was its leader and in charge of its survey work. Lord Clyde's chief pilot, Lt Lt A. McIntyre second pilot was Major P. T. Listeron its London manager. Two specially equipped aeroplanes adaptations of the well known Wapiti were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier so as to circle Mt Everest but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Pokhara the base of the expedition across Nepal territory to Mt Everest was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight in April permitted.

An interesting mountaintight of which details were published in 1933 was one from Rimsalpur to Gilgit and back undertaken by the B.A.A. at Rimsalpur in the course of its routine duties in October, 1932. The expedition was commanded by Lt Isaac and was made

by five of the machines ordinarily in use by the Force. The distance from Rimsalpur by way of the Indus valley and past Nanga Parbat to Gilgit is 280 miles. It was covered in 2 hrs 20 mins on the outward flight and in 2 hrs 5 mins on the return journey. From Gilgit the machines further proceeded upon flights over the Hunza, Nagar and Baklot areas. Brilliant photographs of Nanga Parbat and Rakaposhi as well as of other places of importance or interest were taken.

The year 1932 saw a well organised expedition to Mount Nanga Parbat. It was conducted by Dr Merkl of Munich and included Lt R. N. Frier of the Gilgit Scouts who acted as transport officer, an American Mr Rand Heron and Miss F. Knowlton of Boston U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break up of the weather before they attained success.

Mr Hugh Rutledge carried out during 1932 a valuable reconnaissance of the S.E. flanks of the great circular curtain of Nanga Parbat. Lt Col C. F. Stoebe R.E. and Lt D. M. Burn R.E. lost their lives on 12 August 1932 while climbing on Panjtarni near Tashgam in Kashmir.

Several expeditions have lately been made into the Himalayas by members of the Himalayan Club especially expeditions into Sikkim by members of its Eastern Section.

The Himalayan Club.—Was founded on 17th February 1922 at New Delhi with the object of encouraging and assisting Himalayan travel and exploration and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the Hon. Sir Geoffrey Corbett, Secretary (Commerce Department) of the Government of India, and to Major Kenneth Mason M.C. B.E. Assistant Surveyor General. Its membership is over 1,500 including three lady members and its president is H. F. Sir Malcolm Hailey who has however recently sent in his resignation on the ground that he now resides too far from the Club Headquarters. Maj Gen W. L. O. Twiss is Hon. Secretary.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unobtainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year it was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential. Its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour, and as Lord Crewe said in his despatch on the subject, to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this assumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country.

The foundation stone of the new capital was laid by King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage and is not manured. It is not cluttered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgeon-General Sir C. P. Lukis, Mr H. T. Keeling, C.S.I., A.M.C.S.E., and Major J. C. Robertson, I.M.S. was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A report by a Town Planning Committee, with a plan of the lay-out, was dated 20th March 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and two large blocks of Secretariats. This Government centre has been given a position at Raisina Hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Blore for the Secretariats. The former building is estimated to cost approximately Rs 140 lakhs and the latter groups were originally estimated to some Rs 134 lakhs. The provision made in the design of the Secretariats for extensions in

case it used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1922. To the east of the forum, and below it is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or park way which leads to the main avenue of the city. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Fābagarj which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 75 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

For a temporary capital for the use of the Government of India during the period of the building of the new capital an area was selected along the Alipur Road between the existing civil station of Delhi and the Ridge. The architecture and method of construction were similar to those adopted in the exhibition buildings at Allahabad in 1910 but the buildings have outlasted the transitional period for which they are intended. Army Headquarters were still housed in them in the winter until the season 1929-30. They are now occupied for various purposes including the temporary accommodation of Delhi University.

In October 1912, by proclamation there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,260 and of the new area 14,552, or a total of 412,812. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a prolonged 'battle of the styles' over Delhi. Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the powers of the user, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument. The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architects' aim to avoid doing violence to the principles of structural fitness and artistic unity."

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital

would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors have since then increased the amount, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1923, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount includes allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee in its report published in January 1923, estimated the total expenditure at Rs 129.5 lakhs including Rs 42 lakhs for loss by exchange. Actual expenditure upto approximately the end of 1923 was Rs 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay, whilst there are other items on which some return on account of the sale of leases, genera. taxes and indirect receipts is secured.

Progress of the work.—The construction of New Delhi has made a satisfactory speed, having regard to the curtailment of the budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that they were transferred to them from Calcutta in October 1924, the offices of the Accountant-General, Central Intelligence, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1928. All Government Departments including the Army Department and Army Headquarters and the Air Force Headquarters, have their offices in the new city buildings of which the builders have already had to carry out the first section of the extension provided for in the architect's plans. The Members of the House of the Viceroy's Executive Council including H. K. the Commander-in-Chief live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid April and bringing it down Simla from again in mid October. The experiment was not very successful and was not repeated till 1932-33 when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal occupants of its

residential buildings. It remains to be seen whether the consequent profit will exceed the additional general expense of keeping staff down in the heat.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas and if finally approved by the Committee fixed according to the marvellous process in situ. Other techniques such as fresco or tempera were optional. Artists or schools of art who sent in small scale drawings had to bear the initial expense of preparing them. When these were approved by the Committee, the cost of pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but gave no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones and English artists (who in India were barred from competition the work being strictly reserved to Indian artists). Simonson, a noted decorator, designed especially those of Western India and with such satisfactory results that the specially appointed Expert Committee approved or nearly all. A grand idea of painting has now been completed and the work is continually progressing. Government meanwhile instituted a scheme for sending selected artists to Europe for building studies to enable them the better to join in the work, and this is in operation.

Opinion of the Legislature.—Considerable discussion regarding the new works took place in the Assembly in 1921. The following unofficial resolution was carried:—
The Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable.

A non-official Member in the Legislative Assembly on 28th September, 1921 at Simla, moved a recommendation to Government to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year. This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

H. H. the Duke of Connaught, on 12th February 1921, laid the foundation stone of a large group of parliamentary buildings on a site close to the south-east of the Secretariats. The building, is an imposing pile erected in stone consisting in the main of three horse

shoe-shaped Chambers for the Chamber of Princes, Council of State and Legislative Assembly respectively and surmounted by a large dome over a Central Library connecting all three Chambers.

H.E. the Viceroy (Baron Irwin) proceeded in state to the new Legislative buildings henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The Indian Legislature began its sessions in them next day.

During 1928 official and public attention became focussed on the need to effect drastic improvements in some of the crowded areas of the old city and to provide for its expansion and for suburban developments. This led to the examination of the possibilities of the area lying between the old and new cities and of the desirability of driving connecting roads through the City walls in order to give access outwards in this direction. The old city is now rapidly expanding in a westerly direction i.e. towards and up the Ridge which runs behind both cities and the spaces between the two cities are being developed and utilised. So far the plan for a direct thoroughfare from the midst of the new city through the old city wall to the middle of the old city has not been proceeded with and consequently the magnificent thoroughfare name *Parliament Street* which was ~~conceived~~ for the purpose in New Delhi remains in a truncated condition. The Medical Officer of Health of the old city in his latest report gravely stresses the ill effect of the overcrowded state.

H.E. the Viceroy on 10th January 1930 laid the foundation stone of a large European and Indian General Hospital to be built in the course of the next few years at a cost of Rs. 75 lakhs for the service of both old and new cities. A portion of the scheme will at a cost of Rs. 40 lakhs be executed as a first stage during the ensuing two years. This will provide 254 beds and the necessary laboratories and administrative and residential quarters. The second stage will provide another 110 beds. The hospital is situated between the old and new cities. No progress has yet been made with the building.

All-India War Memorial.—H.E. the Duke of Connaught on 10th February, 1921, laid the foundations of an All India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February 1931.

The Memorial takes the form of a triumphant arch spanning Kingway the avenue running down the centre of the Vista. It is generally similar to the Arc de Triomphe in Paris but is simpler. The monument reaches a height of 160 feet and the inner height of the arch is 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts appears in capital letters the single word INDIA and this is flanked on each side by the initials MCM (i.e. 1900) whilst immediately below them on the left hand are the initials XIV (i.e., 14) and on the opposite side the figures XIX (i.e., 19). Above the Arch is a circular stone bowl 11½ feet in diameter. A column of incense or chemical smoke ascends from this on ceremonial occasions and sometimes and illuminated by electric

light reflections after dark. The memorial is solely Indian in purpose and bears the names of British and Indian officers and N.C.O.s men of the Indian regiments who fought on the Indian Frontier in the Great War (those fought on other fronts being commemorated by memorials erected in those countries).

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still under consideration. To implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary teaching and residential University of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was therefore decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H.E. the Viceroy would be able to lay the foundation stone of the university building in November 1922 but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 Old Viceroy's Lodge was allocated to it for its future home.

The new city was the scene of notable inauguration ceremonies in February 1931. The first of these was the unveiling of four "Damaru Columns" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail. The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose. The second great ceremony was the inauguration of the War Memorial. This was performed in State by His Excellency the Viceroy in the presence of representatives of every unit of the army in India of the Royal Air Force and of a large concourse of official and other spectators. There was a large popular fête on the ground lying below the old Fort and between it and the river Jumna. Their Excellencies the Viceroy and Lady Irwin arranged a programme of festivities at the Viceroy's House. A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1929.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfret, Esq., authorising him to "open a new Lodge in Bengal." Of this personage nothing further is known but under Capt Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zach. Gee, who held office in 1740 after whom came the Hon Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Oliva, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17th, 1790, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Oullin Smith was appointed P. G. M. in 1792. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. of India) in 1797 but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrers in 1792-94 to John Bluvitt, Commander of the "Admiral Watson, Indianman" for East India where no other Provincial Lodge is to be found. Middleton's election was confirmed October 31st 1798, and as the dispensation forwarded by the Grand Secretary was looked upon as attesting the practice of annual elections, he accordingly held the office of P. G. M. Unfortunately the records of the P. G. L. date back only to 1774 and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol or Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta continued and gave their allegiance to the United Grand Lodge of England and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No 383) was established in Madras in 1752. Three others were also established about 1766

In the same year Capt Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Lodges continued working peaceably side by side until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge and Maiden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul Umra who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed. This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 17th century, Nos. 234 at Bombay in 1758 and 509 in Surat in 1798 both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the 'Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No 322) to the 76th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon Mountstuart Mason be having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan. Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge 'Orion in the West' was formed in the Bombay Artillery and installed at Poona as No. 15 'of the Coast of Coromandel.' It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of 'Orion' seceded and formed the 'Lodge of Hope' also at Poona No. 802.

The Grand Lodge of Ireland has no District Grand Master in India at present the Lodges corresponding direct with the Grand Lodge is in Dublin. There are eleven Lodges, 6 in Calcutta, 3 in Ceylon and 2 in Bombay.

Royal Arch Masonry—Under England the District Grand Master in any District is nearly always created also Grand Superintendent, his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under—

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M E Camp A M Kaji under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Secretary of Scottish E A Masonry.

There is one Irish Chapter in Ontario.

Mark Masonry—Under England Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts, but in most cases the District Grand Master is also District Grand Mark Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some 8 O Lodges, but mostly in R. A Chapters, in which the Excellent E A M and other degrees can be obtained. 8 C Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt Wor Master in 8 C Craft does not recognise the ceremony of Rt W Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M N M working under its charter. Separate charters for Mark Lodges are only issued by the G Chapter of Scotland.

Other Degrees—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Scientific Surveys.

Zoological Survey of India—It was established in 1916 when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875 and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal whose members had been accumulating systematic collections since 1814. Organized zoological investigation in India has thus been in continuous progress for nearly 120 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed, the Superintendent) of the Indian Museum has been a zoologist and among the officers who have held the appointment have been such well known members as Anderson, Wood-Mason, Alcock and Annandale.

With the exception of the Director (Lieut. Colonel R. B. Seymour Sewell, F.R.S.) all the officers are Indian. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum.

Mammal Survey—The Survey was instituted in the year 1912 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma and Ceylon and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museums in India, the primary object of the Survey being the furtherance of our knowledge of Indian Mammalian Fauna. Up to 1891 Naturalists in India had to rely for information on Dr. Jerdon's "Mammals of India" published in 1874. In 1884 R. A. Sterndale published his *Natural History of Indian Mammals* a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr. Slater, Hon. Secretary to the Zoological Society, and signed by Darwin, Hooker, Huxley and other well known scientists, was presented to the Secretary of State for India. The memorial recommended that a series of Volumes dealing with the Fauna of India should be prepared and Dr. Blanford should be appointed its Editor. The memorial resulted in the publication in 1886-1890 of the Volume on Mammals in the "Fauna of British India" Series and since 1901 this volume has been the standard work on Indian Mammals. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the

discoveries of new species have rendered Blanford practically obsolete.

To remedy this defect, at the instigation of the authorities of the British Museum the Bombay Natural History Society decided to institute what is now known as the Mammal Survey. Mr. W. S. Millard, then Hon. Secretary of that Society issued in an appeal to its members to enable the Society to engage the services of trained European collectors so as to make a systematic collection of the mammals of India, Burma and Ceylon. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920 partly by subscriptions from the Society's members, contributions from Indian Princes and grants from the Indian Government, the Government of Burma, Ceylon, Malay States, and the Provincial Governments. Subscriptions were also received from a few Learned Societies and Institutions in England and America. By the outbreak of the war the Survey had been carried on over large areas of the country the districts covered being—in Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar; the Southern Maharatta Country and Kanara in Southern India, in Coorg and Mysore; in the centre large tracts of the Central Provinces and some districts of Bengal and Behar; in Northern India the Society's collectors had worked over Kumaun, Darjeeling and Sikkim and the Bhutan Duars. In Burma, collections were made along the Chindwin river in Central Burma and in the Shan States, Pegu and a portion of Tenasserim. The whole of Ceylon was also systematically surveyed.

The material which up to the outbreak of War comprised some 17,000 specimens was forwarded to the British Museum where the collections were scientifically worked out by the late Mr. B. C. Wroughton, formerly Inspector General of Forests, Mr. Oldfield Thomas, F.R.S., Curator of Mammals at the British Museum, Mr. Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the *Journal of the Bombay Natural History Society*. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammals has enabled the revision of Blanford's Mammals to be undertaken and early in 1931 the Secretary of State for India commissioned Mr. B. C. Wroughton since deceased, and Mr. M. C. Hinton to undertake the work.

When demobilization rendered it possible the work of the Survey which had been in abeyance during the war was resumed and a collector Mr. C. Primrose was sent to Assam and the Mergul Archipelago and Mr. Oldfield Thomas has written very appreciatively of his work among these islands. Mr. Primrose then began working inland but owing to the impracticability

ity of continuing his work in Burma during the monsoon, he was transferred to Gwalior where H. H. the Maharaja kindly accorded permission to work in his territories.

After working a portion of the Eastern Ghats the next move was to the Kangra District in the North West Himalayas and then on to the Punjab Salt Range. Two other collectors worked in Southern India. Permission was once more obtained from the Nepal Government for a collector to resume the Survey work in that country. The work in Nepal was brought to a successful close early in 1923 with a representative collection of interesting mammals and birds.

The Survey now has only one collector who is collecting in the foot hills of Himalayas and the Pindari Valley.

Botanical Survey—The Botanical Survey Department of the Government of India is under the control of a Director who is also Superintendent of the Royal Botanic Garden Calcutta. There is a staff at headquarters of two officers for systematic work and at the Indian Museum a curator who is engaged in the development and maintenance of the Industrial Section. The Director holds administrative charge of the Government of India's cinchona operations in Burma of quinine manufacture in Bengal and of the distribution of cinchona products to the Government of India's area of distribution in Upper India. The question of the extension of cinchona cultivation in the Indian Empire has of late years formed a subject of interest to several bodies including the League of Nations Health Section. The Royal Commission on Agriculture recommended that India should be made self-sufficient in the matter of quinine production. Attempts are now being made to overcome the financial and other difficulties hindering the ready use of quinine through India. The cinchona operations directly under the Government of India are for the present confined to the Tanasserim district in Lower Burma where a large tract of country is held in reserve. Considerable success has already been achieved with the crop and it has been established that cinchona will grow in this area and that it can be grown at some profit but indications here as elsewhere in India point to the inadvisability of leaving production subject to the vagaries of the climate in one area and generally, of localising effort. Other areas in Burma and in Assam seem suitable for this cultivation and await experimental proof when the present financial and other obstacles to cinchona development have been overcome.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the physical facts of the area it administers and although apart from the Cinchona operations the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematic physiology, ecology, and histology of plant life—the work accomplished in pure botany at the Royal Botanic Garden during the last century and a half has exerted a profound and far-reaching influence upon the

development of Agricultural Sciences and Forestry in India.

Survey of India—The work of the Survey of India falls under various heads, namely, trigonometrical, topographical, and forest surveys, special surveys and explorations, and map reproduction. Cadastral surveys are now chiefly carried out by the Provincial Land Records and Settlement Department but are in some cases supervised by Survey of India officers.

The land survey and mapping of British India have advanced with the acquisition of territory they commenced when the first battles were fought and the first province gained. James Rennell who distinguished himself as a midshipman at the siege of Pondicherry and afterwards rose to the rank of Major in the army may be said to be the father of Indian cartography and he was made Surveyor of the East India Company's Dominions in Bengal in Lord Clive on the 1st January 1767. The

great Trigonometrical Branch now termed the Geodetic Branch was organized by Col. W. Lambton who was first Superintendent—from 1800 to 1813. He was followed in that capacity by one of the best known Surveyors Generals of India viz. Sir George Everest who was head of the Department from 1830 to 1843.

In 1904 a Committee was appointed to examine the methods and working of the Survey of India with special reference to the preparation or revision and reproduction of the topographical maps of the country to overtake the errors of revisional survey and to secure that the map of India should be brought up-to-date and revised at proper intervals. A considerable increase of establishment was recommended and a programme for 20 years work was drawn up. Certain scales were determined which however were from time to time modified, but the scale of 1" to 1 mile as the general standard for the whole of India was accepted. The work of the department has in recent years greatly been hampered by the personal need for retrenchment and expenditure and owing to the fact that a very large proportion of the members served throughout the Great War in various capacities on various fronts little more than half of the programme which it was hoped would be completed by 1930 has been done and this in spite of the reduction of the scale of Survey for less important areas. Thus, although the surveys covering an area about equal to that of England are carried out every year, the maps of one third the country are still very old and only roughly kept up to-date by means of rather perfunctory information supplied by local officials the old maps are also about 2 miles out of position being based on a longitude of Madras determined in 1815. On the other hand the department's organisation has recently been improved by the creation of a new North West Frontier Circle under a separate Director to the special functions of which are to deal with the requirements of the Army for operations in that area. This is in addition to the four already existing Circles for all India and Burma. The Department is responsible for all topographical survey for explorations and the maintenance of geographical maps of the greater part of Southern Asia, for geodetic work including the main trigonometrical framework which extends in some cases far beyond the frontiers of India and control networks of precise level

ing based on tidal observations tidal predictions and the publication of Tide Tables for nearly 40 ports between Suva and Singapore, the Magnetic Survey astronomical observations with seismographic and meteorological records at Dehra Dun and geodetic investigations of an international character in regard to which India enjoys a unique position between the greatest highlands of the world and a deep ocean extending to the Antarctic. Indian geodesy has thus disclosed by far the largest known anomalies of gravitational attraction in the earth's crust, which have led to some of the most important developments of modern geodetic research.

While expending on topographical and geodetic work all funds allotted by Imperial Revenue the Department is steadily developing the policy of aiding local surveys in various ways on payment by those concerned. These miscellaneous operations include all forest and cantonment surveys and work for Boundary Commissions, many riverine irrigation railway and city surveys and surveys of tea gardens mining areas &c. with a great deal of control levelling, for them miscellaneous administrative assistance and officers are given to the revenue surveys of various Provinces and States. The Printing offices do much work for other Government departments, such as printing special maps, illustrations for Archaeological Reports and diagrams for Patents &c. The Mathematical Instrument Office gives valuable aid to all Government departments by ensuring a high standard of instrumental equipment especially in connection with optical work and by the manufacture and repair of high class instruments which would otherwise have to be imported from abroad.

The Department is also responsible for all survey operations required by the Army and has rapidly been developing measures to meet the greatly increased complexity of modern military requirements, especially in connection with air survey. The development of air surveys for various civil purposes is also receiving all possible encouragement and assistance while the latest methods of stereo photography are being studied experimentally.

Administration is by the Surveyor General under the Education Health and Lands Department of the Government of India. Head quarter offices are at Calcutta under the Assistant Surveyor General.

There are seven Directors including the Director, Map Publication who is in administrative charge also of the Photo Litho Office and the Mathematical Instrument Offices, at Calcutta and the Director Geodetic Branch at Dehra Dun. For topographical purposes India is divided into five Circles, each under a Director as follows—Frontier Circle, which deals chiefly with the Army has Headquarters at Simla. Central Circle, Headquarters Mussorie. Eastern Circle, Headquarters Shillong. Southern Circle, Headquarters Bangalore and Burma Circle, Headquarters Maymyo. Any inquiries regarding surveys may be addressed either to the Headquarters office or any of the Directors concerned, from whom also maps and publications of the Survey of India can be obtained as well as from the Map Sales Office, situated at 13, Wood Street, Calcutta.

Indian Science Congress—The Indian Science Congress was founded largely owing to the efforts of Prof P S MacMahon and Dr J L Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science for this end the Congress is held at different centres annually and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress which is progressive and vigorous meets in January each year the proceedings last for six days. The Head of the Local Government is Patron of the Congress, the Congress itself is presided over by a Presidential Address delivered by the President for the year. The President is chosen annually the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research, when the sections meet separately each section is presided over by its own President also chosen annually. The meetings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interest, in the evenings public lectures are delivered.

The Indian Research Fund Association—This Association which is a much older body than the National Research Council in England, was constituted in 1911 with a sum of rupees five lakhs (£85,000) set aside as an endowment for the promotion and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation mode of spread and prevention of communicable diseases. It can claim to be amongst the pioneers in organized medical research on a large scale and has been referred to by other countries in very complimentary language. Still better it has been copied by several other nations.

During 1929 the constitution of the Governing Body was altered by the Government of India. It was considered that in view of the largely increased activities of this Association, the Governing Body, which had hitherto most expeditiously and economically conducted the business of the Association should be now made more representative in character. It was accordingly enlarged by including two non-official members from the Legislative Assembly one from the Council of State, two from the Medical Faculties of the Universities and one non-medical scientist. The creation of a Recruitment Board in India for selecting the personnel employed by the Association and of a Consultative Recruitment Board in England also came under the consideration of Government. It was further decided that the Governing Body of the Indian Research Fund Association should be the

co-ordinating agency for the research activities of the All India Institute of Public Health which is being built at Calcutta and of the proposed Central Medical Research Institute.

The Conference of Medical Research Workers is drawn from all parts of India and consists of experts in their particular lines of research discussed yearly the general policy of research work in India as well as the detailed schemes which are proposed to be undertaken by the Indian Research Fund Association in the following year. The results of these discussions are available to guide the members of the Scientific Advisory Board of the Indian Research Fund Association in making their recommendations for the programme of the following year. The Advisory Board also met in December and examined all the proposals for research work and recommended a scheme of research for the guidance of the Governing Body of the Indian Research Fund Association.

The official organ of the Association is the Indian Journal of Medical Research, which has a wide international circulation. The Association also publishes Indian Medical Research Memoirs which are supplementary to the Journal.

Since its inception a great number of inquiries have been carried out under the auspices of the Association and great expansion of its activities has taken place from small beginnings.

The principal inquiries are the Malaria Survey of India, which is a Central organisation located at Kasauli and has malaria research at the Haffkine Institute Bombay kala-azar by a commission in Assam bacteriophage by Dr. Asheshov at Patna nutritional research by Colonel McCarrison at the Pasteur Institute, Calcutta and indigenous drugs and drug addiction by Lt. Col. Chopra at Calcutta.

The Malaria Survey of India which now enjoys international recognition is constantly called upon to advise as to the best methods for malaria prevention in India. As part of the activities of this organisation and in commemoration of Sir Ronald Ross intimate association with India, an experimental malaria station was opened in Karnal in January 1927 and is known as The Ross Field Experimental Station for Malaria. Besides carrying out experiments in connection with the prevention of malaria annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied. In connection with the Malaria Survey of India and in order to assemble all facts relating to malaria, a new publication has been started known as the Records of the Malaria Survey

of India, of which up-to-date four numbers have been issued.

The programme for each year involves an expenditure of Rs. 10 lakhs or more and the institution of 40 or 50 investigations.

Geological Survey—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country mineral deposits of importance are sometimes discovered. Such discoveries are published without delay and every endeavour is made to induce private firms to take up the exploitation of the mineral discovered. Collections of minerals, rocks and fossils are accumulated and exhibited in the public galleries of the Indian Museum situated in Calcutta. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Hills, a range which for hundreds of miles runs parallel to the Himalayas, at a short distance below the foot hills of the latter, and is largely composed of Himalayan detritus. The Geological Survey helps in the spread of geological education in India by the presentation of mineral rock and fossil specimens to educational institutions. The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the Department to help in the solution of engineering problems connected with the selection of sites for dams for reservoirs, the safety of hill slopes and the suitability of particular building stones for particular purposes. The Department is also often able to advise on problems connected with the supply of water. As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India the Department is also in a position to give advice concerning the conservation of the mineral resources of the country. The Geological Survey also undertakes the examination and identification, without fee of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the Memoirs, Records and Palaeontologia India. The Survey headquarters are in Calcutta.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director General of Posts and Telegraphs who works in subordination to the Government of India in the Department of Industries and Labour. For the efficient working of the Department a representative of the Finance Deptt.—the Financial Adviser Posts and Telegraphs—has been attached to the office of the D G P & T. The Financial Adviser not only controls the finances of the Deptt but also assists the D G generally in all matters containing financial implications. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director General one Deputy Director General (postal services) and seven (including one temporary) Asstt Director General whose status is similar to that of Deputy Postmaster General.

There is also a Publicity Officer attached to the D G's office. The headquarters of that officer is at Bombay.

For postal purposes, the Indian Empire is divided into nine circles as shown below, Bengal and Assam, Bihar and Orissa, Bombay, Buzama, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first eight is in charge of a Postmaster General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director General for the whole of the postal arrangements in their respective circles including those connected with the conveyance of mails by railways and inland steamers. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General. The nine Postal Circles are divided into Divisions each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes.

The Inland Tariff (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows —

	When the postage is prepaid,	When the postage is wholly unpaid,	When the postage is insufficiently prepaid
Letters.	Anna, Pice		
Not exceeding two and a half tolas .	1 8	Double the prepaid rate (chargeable on delivery)	Double the deficiency (chargeable on delivery).
Every additional two and a half tolas or part of that weight .	1 8		
Book and pattern packets			
Every 5 tolas or part of that weight .	0 6		

of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmaster General. The Presidency Postmasters indeed have one or more Superintendents subordinate to them. When the duties of the Postmaster or a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departments, officers on small pay or of extraneous agents such as school masters, shopkeepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883 a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

Postage is		Insurance fees	
single	9 pies		A p
Reply	1 anna 6 pies	Where the value insured does not exceed Rs 100	0 3

for each complete sum of Rs 25 and 4 annas for the remainder provided that, if the remainder does not exceed Rs 10, the charge for it shall be only 2 annas		Parcels	
Telegraphic money order fees —The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary message" In addition to the above a supplementary fee of two annas is levied on each inland telegraphic money order		(i) Parcels not exceeding 20 lbs in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows—	
In the case of Ceylon the telegraph charge is calculated at the rates shown below—			
Express —Rs. 2 for the first 12 words and 3 annas for each additional word		Via	Over
Ordinary —Rs 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India		Gibraltar land	
Value-payable fees —These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.		For a parcel—	Rs a p Rs a p
		Not over 3 lbs	1 8 0 1 14 6
		Over 3 lbs, but not over 7 lbs	2 12 0 3 4 6
		„ 7 „ „ 11 „	3 15 0 4 7 6
		„ 11 „ „ 20 „	6 3 0 7 5 0
		These parcels are delivered by the post office and the postage paid carries them to destination	

(34) Parcels which exceed 11 lbs but which do not exceed 50 lbs (the maximum allowed) in weight are forwarded from India through the medium of the P & O S N Co and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound or fraction of a pound. The parcels are delivered free of charge within a radius of one mile from the Company's Head Office in London. If addressed to any place beyond that radius carrier's charges are levied from the addressee on delivery. Parcels thus forwarded through the P & O S N Co cannot be insured during transit beyond India, but must if they contain coin etc be insured during transit in India. No acknowledgment of delivery can be obtained in respect of these parcels nor can such parcels be transmitted to Great Britain and Northern Ireland under the value payable system.

Limits of Weight.

Letters—4 lbs. 6 oz

Printed Papers and Business Papers—To Great Britain and Northern Ireland, and the Irish Free State, British Australasian Colonies, Hong Kong, the Straits Settlements, Fogo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs

To Ceylon—No limit.

To all other destinations—4 lbs 6 oz

Samples—To Great Britain and Northern Ireland and the Irish Free State, Hong Kong, the Straits Settlements, Fogo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—200 tolas.

To all other destinations—1 lb 2 oz.

Parcels—11 lbs. or 20 lbs

Limits of Size

Letters—1½ feet length by 1½ feet in width or depth. If in form of roll 2½ feet in length and 4 inches in diameter.

Printed Papers and Business Papers—To Ceylon—2 feet in length by 1 foot in width or depth.

To all other destinations—1½ feet in length by 1½ feet in width or depth.

If in form of roll, dimensions in all cases are 30 inches in length and 4 inches in diameter.

Samples—To Great Britain and Northern Ireland, and the Irish Free State, Ceylon, Hong Kong, the Straits Settlements, the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth.

To all other destination—1½ feet in length by 8 inches in width and 4 inches in depth.

If in form of roll, dimensions in all cases are 1½ feet in length and 6 inches in diameter.

Money Orders—To countries on which money

orders have to be drawn in rupee currency, the rates of commission are as follows—

	Rs a
On any sum not exceeding Rs 10	0 3
On any sum exceeding Rs 10 but not exceeding Rs 25	0 6
On any sum exceeding Rs 25	0 6
For each complete sum of Rs 25 and 6 annas for the remainder, provided that if the remainder does not exceed Rs 10, the charge for it shall be only 3 annas	
To countries on which money orders have to be drawn in sterling, the rates are as follows—	Rs a
On any sum not exceeding £1	0 4
exceeding £1 but not exceeding £2	0 7
£2 „ „ £3	0 10
On any sum exceeding £3	Rs a
but not exceeding £4	0 13
£4 „ „ £5	1 0
£5	1 0

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1 the charge for it shall be 4 annas, if it does not exceed £2, the charge shall be 7 annas, if it does not exceed £3 the charge shall be 10 annas and if it does not exceed £4 the charge shall be 13 annas.

Insurance fees (for registered letters and parcels only)

For insurances of letters and parcels to Mauritius, Iraq, British Somaliland, the Seychelles and of parcels to Zanzibar and Portuguese India

Where the value insured does not exceed Rs 180	Annas
For every additional Rs 180 or fraction thereof	4½

For insurances of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available

Where the value insured does not exceed £12	Annas
For every additional £12 or fraction thereof	4½

Acknowledgement fee.—3 annas for each registered article

Magnitude of business in Post Office.—At the close of 1930-31 there were 116,306 postal officials, 24,175 post offices, and 169,308 miles of mail lines. During the year, 12,997 million articles, including 54 million registered articles were posted, stamps worth Rs. 63 millions were sold for postal purposes over 39 million money orders of the total value of Rs. 84-8 millions were issued, a sum of Rs. 247 millions was collected for tradesmen and others on V P articles, over 6 million insured articles valued at 1,387 5 millions of rupees were handled. Customs duty aggregating over 6 6 million rupees was realised on parcels and letters from abroad, pensions amounting to Rs. 16 1 millions were paid to Indian Military pensioners and 14,091 lbs. of quinine were sold to the public. On the 31st March 1931, there were 2,477,613 Savings Bank accounts with a total balance of Rs. 370 millions and 79,058 Postal Life Insurance policies with an aggregate assurance of Rs. 148 6 millions.

TELEGRAPH DEPARTMENT.

Telegraphs—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster General assisted by a Deputy Postmaster General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs in charge of the two Circles. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director General himself, consists on the engineering side of a Chief Engineer Telegraphs with one Personal Assistant for traffic work there is a Deputy Director General, with an Assistant and an Assistant Director General. On the 27th March 1920 a Controller of Telegraph Traffic was appointed to assist the Deputy Director General in the inspection of offices and in controlling telegraph traffic in the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the engineering work is in charge of the Postmaster General who is a Telegraph officer specially selected for the purpose. These six Circles were divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Director of Posts and Telegraphs. On the 1st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work on the lines of the Burma Circle the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster General in 1925 and this unification proved an unqualified success and was gradually extended to other circles. The fusion was completed in March 1930.

There is also a Wireless Branch attached to the Director General's office which is in administrative control of all wireless work in the Department. The Director of Wireless is in charge of this branch and is assisted by two officers.

The telegraph traffic work is under the control of the Postmasters General, each of whom is assisted by a Deputy Postmaster General and a suitable staff of attached officers.

The audit work of the Telegraph Department is like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs assisted by a staff of Deputy and Assistant Accountants General.

Inland Telegrams and Tariff—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows—

	For delivery in India		For delivery in Ceylon	
	Private and State		Private and State	
	Ex-press	Ordinary	Ex-press	Ordinary
	Rs. a	Rs. a	Rs. a	Rs. a
Minimum charge	1 8	0 1	2 0	1 0
Each additional word over 10	0 2	0 1	0 3	0 2

The address is charged for

	Additional charges	
	Minimum for reply paid telegram	Minimum charge for an ordinary telegram
Notification of delivery		Minimum charge for a telegram of the class (ordinary or express) prescribed by the sender
Multiple telegrams or less	each 100 words	4 annas
Collection		One half of the charge for an ordinary telegram of same length
		Rs.
		If both the offices of origin and destination are closed 2
		If only one of the offices is closed 1
For acceptance of an Express telegram during the hours when an office is closed		If the telegram has to pass through a closed intermediate office an additional fee in respect of each such office 1
Signalling by flag or semaphore to or from ships—per telegram		The usual inland charge plus a fixed fee of 8 annas.
Post litre		Amount actually necessary
Copy of telegrams	each 100 words or less	4 annas

Press telegrams	For delivery in India	For delivery in Ceylon
	Ex press Rs. a.	Ordinary Rs. a.
Minimum charge	1 0	0 8
Each additional 6 words over 48 in respect of India		1 0
Each additional 4 words over 32 in respect of Ceylon	0 2	0 1
The address is free		0 2

Surcharge on telegrams.—A surcharge of two annas or one anna according to the class of telegram *Express* or *Ordinary* is levied on every inland sent telegram. This surcharge does not apply to press telegrams nor to telegram to Ceylon.

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and state telegrams to countries in Europe are as follows—

	Ordinary	Deferred	State
	Rs. a.	Rs. a.	(H.R. Govt.)
All countries in Europe (except France)	3 15	1 5	0 10
via Eastern			0 10
Great Britain and Northern Ireland via L.R.T.	—	1 0	0 8
Most other countries in Europe via L.R.T.	—	1 5	0 10

Radio-Telegrams.—For radio telegrams addressed to ships at sea from offices in India or Burma and transmitted via the coast stations at Bombay, Calcutta, Karachi, Madras, Port Blair or Rangoon the charge is thirteen annas per word in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from Offices in India or Burma transmitted to ships at sea through the coast stations mentioned in the preceding paragraph—

	Total charge per word Rs. a.
(1) All Government or Private Radio-telegrams except those mentioned in (2) to (4) below	0 13
(2) British Indian or Colonial Government Radio telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Marine	0 8

(3) Private Radio-telegrams to His Britannic Majesty's Ships of War	Rs. a.
	0 8
(4) Radio telegrams to Spanish or Swedish ships	0 12

The sender of a radio-telegram may prepay a reply. He must insert before the address the instruction R. P. followed by mention in Rupees and annas of the amount prepaid, e.g., R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS

Daily Letter Telegrams in plain language, which are dealt with telegraphically through out are accepted on any day of the week, excluding Sundays and telegraph holidays, and are ordinarily delivered to the addressee after forty-eight hours. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily a quarter of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 20 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter Telegrams are transmitted after Deferred Foreign telegrams.

In the Daily Letter-Telegram service the special instructions relating to prepayment of replies are admitted other special services are inadmissible in DLT telegrams.

Packed messages, i.e., messages intended to be communicated to different persons, are not accepted in the text of Daily Letter-Telegrams. The charge for a week end letter telegram to Great Britain and Northern Ireland is 4 annas a word via Eastern and 8 annas a word via L.R.T. subject to a minimum charge for 20 words per telegram including the indication WLT.

Daily and Week-end Letter Telegrams—Minimum charge for 20 words.

Ordinary rate telegrams may be written in Code

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration Reply Paid, etc

Full lists published in Posts and Telegraphs Guide

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 108,544 miles of line including cable and 573,461 miles of wire including conductors respectively on the 31st March 1931. The numbers of departmental telegraph offices were 257 and 121 (including 17 Radio offices) respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 4,297

The increase in the number of paid telegrams dealt with is shown by the following figures—

	1897-98	1930-31
Inland	4,107,270	13,587,784
Private	860,282	326,085
State	35,910	571,238
Foreign	735,079	2,327,704
Private	9,898	34,788
State	5,278	97,720
	5,754,415	18,115,379

The output of the workshops during 1930-31 represented a total value of Rs 24,02,183.

Wireless.—The total number of departmental wireless stations open at the end of 1930-31 was twenty-seven viz Allahabad Bombay Calcutta, Delhi Diamond Island, Gaya Jodhpur Jubbulpore Karachi (two stations) Lahore, Madras (3 stations), Bombay Nagpur, Peshawar, Poona Port Blair Quetta Rangoon (3 stations) Sand heads two pilot-vessels, Secunderabad and Victoria Point of which only Port Blair and Victoria Point booked telegrams direct from the public.

The Duplex high-speed service between Rangoon and Madras continued to work satisfactorily, the Wheatstone system being employed generally for this circuit. Communication with the Imperial Air Mail Aeroplanes is maintained during flight by Karachi Radio between Karachi and Jask

The aeroplane conveying passengers and mails between Karachi and Delhi were in continuous wireless communication with the wireless stations at Karachi Jodhpur and Delhi during flight.

Telephones.—On the 31st March 1931 the number of telephone exchanges established by the Department was 296 with 18,854 straight line connections and 314 extension telephones. Of these exchanges, 180 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 26 with 34,919 connections.

The total staff employed on telegraph telephones and wireless on the 31st March 1931 was 14,680

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year ended 31st March 1931 was Rs 67,58,697 and Rs 15,22,36,121 respectively. The receipts for the year ended 31st March 1931 amounted to Rs 10,77,86,054 and charges (including interest on capital outlay) to Rs 12,11,35,302 the result being a net loss of Rs 1,33,49,308

Sanitation.

The history of the sanitary departments in India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. The reason lies in the apathy of the people and the tonsacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places but the village house is still often ill-ventilated and over-crowded, the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools, and the village tank polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 22nd 1914 the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India* May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 476 *et seq*) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. It is not too early to attempt to indicate the effects of this change.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January 1928 before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations concluded that the State effort in regard to Health Organisation in British India is one of no mean importance that it has evolved over a couple of centuries during which many mistakes in policy must be admitted that it has provided the Officers and the stimulus necessary for laying the foundations of medical education that it has tried to uphold the ethical standards of western medicine and that in which ever way it is regarded it is an effort of which no Government need be ashamed. He quoted the remark of the Government of India in their Resolution of 1914, that "for the land of the exalted one must not expect the pace of motor car

The Public Health Commissioner in his annual report for the year 1925 noted the introduction of the political element into health matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fair way to maturing but that in other provinces with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed. But, he says though the picture is neither bright nor the future rosy it is becoming increasingly evident that a considerable section of the Indian community is thinking seriously on these public health problems amid much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive criticism can be met with which goes to prove my contention.

India's birth rate in 1925 was nearly twice that of England and Wales her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 24 times that of England and Wales and nearly 44 times that of New Zealand. The information furnished for the great group of infectious diseases of world import i.e. plague cholera small pox yellow fever typhus malaria, and dysentery shows (says the Public Health Report already cited) that if we except typhus and yellow fever India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera. The significance of these facts must, adds the Commissioner be obvious to all who think. Briefly their implication is that India a house from the public health point of view is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children, of the effect of feeding on rickets, scurvy and beriberi of the way in which malaria, cholera yellow fever, dengue ankylostomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation.

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Calcutta in December 1927, urged the importance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no public Health Act for the whole of India nor under existing administrative arrangements is one immediately possible but the desirability of the Central Ministry of Health and of such an Act is likely to be urged in the course of the revision of the Constitutional Reforms now in progress.

The Commissioner in his annual report to Government for 1927 gives at the outset the following text for thought: Whether the institution of a Ministry of Health, which many of us think is long overdue for the Indian Empire would accelerate progress is a matter of opinion, but there can be little doubt that such progress must depend not on a haphazard programme or on the fulfilment of an annual routine of measures sanctified by tradition but rather on the acceptance of such cardinal principles as have been laid down by the Chief Medical Officer of the British Ministry of Health in his 1927 report and by a genuine attempt to work to these. Sir George Newman points out that 'Nothing is more certain than the fact that the physical advancement and health of mankind is dependant not upon a doctor's stent here or a sanitary institution there but upon the whole social evolution of the people. Now, these desired ends are not reached merely by announcing them, still less by leaving things to chance drift or fate. They can in any case only be partly reached at all without foresight, organisation and expenditure. He proceeds to inculcate four basic principles which it is necessary for

any modern State to work to and which are as follows:—

- (a) ascertainment and accurate registration of the data obtainable,
- (b) the establishing of a definite standard to work to, which should be based on health and physiology and not on disease or pestilence,
- (c) the study of the character and incidence of disease, its causes and predisposing conditions, its mode of spread, its social factors which increase or reduce it and the means of its treatment and prevention,
- (d) the establishment of a national organisation by the assent of public opinion, such organisation being an index of the aspirations and enlightenment of the people.

It is for consideration how far we in India are now working to these basic principles or are likely to in the future and whether our existing public health organisation is best suited to enable us to do this.

The following table of vital statistics is taken from the Public Health Commissioner's latest annual report:—

Province	Birth Rates (per mille)		Death Rates (per mille)	
	1931	Previous 5 years	1930	Previous 5 years
Delhi	44.9	43.86	29.1	33.08
Bengal	25.9	28.70	21.8	24.80
Pilhar and Orissa	93.2	98.90	27.1	25.40

Statistical health reports for all India are always, inevitably submitted are belated owing to the number of provinces from which returns have to be collated.

The Public Health Commissioner in his most recently published annual review which concerns the year 1930 shows that the outstanding data concerning public health in the year 1929 are briefly as follows—

(1) The birth-rate was 35.99 per mille compared with 30.47 in 1929 and an average of 35.19 in the preceding 5 years.

(2) The death rate was 26.85 per mille against 25.95 in 1929 and a preceding 5 years average of 20.58.

(3) The infantile death rate (per 1,000 live births) was 180.83 against 178.37 in 1929 and an average of 176.34 in the preceding 5 years. The death rates of some other countries during 1930 were—England and Wales 60, Canada 88, United States of America 64, New Zealand 34, Australia 41, Union of South Africa (White) 87.

The Public Health Commissioner in his report reviewing these figures observes: Can it not be hoped that these figures will compel thinkers of all classes to ponder over their meaning? Will they not stimulate the leaders

of the country to new and increased efforts on behalf of those who look to them for help and guidance? If they elicit no such response then there can be little hope of improvement but the world in general and the peoples of this country in particular will have the right to demand an explanation for their great failure and that right will without doubt be exercised in the not too distant future. For it is an undoubted fact that with the spread of a new political consciousness in India there has arisen during recent years an ever increasing demand for knowledge of hygiene and for improved health organisations. That demand will have to be satisfied and like other and certainly more vicious habits the appetite will increase with the amount of available pabulum. It is in this direction that lies the greatest hope of development.

The result as regards British India, of the new census enumeration held in India in February, 1931 is shown in the following table—

Province	Population 1921			Population 1931		
	Total	Male	Female	Total	Male	Female
Ajmer Merwara	405,271	209,566	220,705	560,929	298,081	264,211
Andamans and Nicobars	27,086	20,793	6,293	29,463	19,702	9,761
Assam	7,459,128	3,887,880	3,571,248	6,622,251	4,537,206	4,080,045
Bihar	420,648	255,014	165,634	464,508	270,004	198,504
Bengal (Pres.)	46,701,671	24,154,210	22,557,371	50,122,550	26,044,880	24,078,170
Bihar and Orissa	88,906,154	46,760,878	42,145,276	87,690,306	46,762,044	40,928,310
Bombay (Pres.)	19,340,210	10,178,969	9,171,250	22,259,977	11,719,501	10,540,886
Burma	13,212,192	6,765,696	6,445,232	14,065,917	7,489,400	7,170,158
Central Provinces and Berar	13,912,760	6,251,399	6,661,361	15,472,638	7,748,183	7,726,455
Coorg	183,838	89,607	74,337	168,089	80,414	72,665
Delhi	488,452	281,777	206,675	636,246	309,497	266,749
Madras (Pres.)	42,318,985	20,870,749	21,448,236	46,748,644	23,088,011	23,650,043
N. W. Frontier Province	2,251,340	1,229,410	1,022,024	2,425,076	1,315,818	1,109,258
Punjab	20,685,478	11,806,507	9,378,971	23,580,851	12,876,312	10,704,539
United Provinces of Agra and Oudh	22,969,797	12,787,359	12,587,710	25,408,783	12,444,006	12,968,767
Total	246,856,191	126,796,887	120,057,304	271,749,312	140,070,321	131,678,991

In the year 1930 birth rates exceeded death rates in every province except Coorg where the death rate was in excess by 1.73 per mille. Notable increases were—Delhi Province +18.06, Madras Presidency +14.31, Punjab +13.04, U. P. +10.11, C. P. +9.98 and Assam +9.95.

The Health Commissioner for the first time, in connection with returns for 1930 had a special analysis of infantile mortality made and the result is to show that in all the Provinces almost without exception, and particularly during the last decade there has since 1918 been a distinct downward trend in the registered infantile mortality rates. The Health Commissioner in his annual report points out that the commencement of the fall immediately after the 1918 influenza pandemic and its uninterrupted continuance since then is remarkable. This he concludes, shows that the recently instituted child welfare schemes had nothing to do with it.

He adds, in reference to what he describes as the appalling waste of infantile life, There

are not lacking voices which say that this infant death rate is a natural check on India's fertility and that the population problem of India will become even more staggering than at present if infant lives are to be preserved. Others contend that to save such lives is to preserve the unit and burden the country with useless citizens. Such arguments confuse the issues. It may well be argued that the population question should be faced but that is not to say that its solution lies in allowing infants to die of preventable diseases. Those who reason thus forget that for every child which dies of disease or malnutrition several others grow up feeble and crippled so that even if the population is reduced the country is still left with the burden of the unfit. Although the large voluntary societies, such as the Indian Red Cross Society, are doing good service in organising and directing a considerable amount of voluntary work, their provincial branches cannot afford to employ trained personnel whose chief work would be to organise welfare work. Such a function belongs to the Local Governments.

THE HEALTH OF THE ARMY

General Health statistics of the British Army in India
during the year 1929

1929	Average Strength	Admissions		Deaths		Invalids sent Home.		Invalids Discharged in India		Invalids finally discharged in United Kingdom		Average Constantly sick	
		No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000
Officers	2,390	996	415.9	17	7.10	34	14.20					30	64.15
British Other	35,628	33,908	609.5	158	2.84	344	9.78					1,693	47.30
British Banks	3,921	1,269	32.1	9	2.30	58	14.79					43	34.11
British Banks Other wives		826										33	84
British Banks Other wives — parturition													
British Other Banks child	6,162	1,690	274.3	87	14.12	11	2.27					61	60.10
British Other Banks child													
Others		2,005		40		23						73	93

There were 158 deaths or 2.84 per 1,000 of the strength compared with 2.90 per 1,000 in 1928 and 3.34 in 1913

The most important causes of mortality were —	Drowning	8
Local injuries	Tuberculosis of lung	7
Enteric group of fevers	Malaria	7
Pneumonia	Effects of heat	6
Appendicitis	Suicides	6

544 or 9.78 per 1,000 of the strength were sent home as invalids compared with 9.87 in 1928 and 7.49 in 1913

The principal causes of invaliding to the United Kingdom were —

Tuberculosis —		
Pulmonary	40	57
Other forms	17	
Diseases of middle ear		52
Mental diseases		32
Disordered action of heart		30
Epilepsy		28
Deformities of the feet		17
Neurasthenia and hysteria		17
Valvular disease of heart		14
Bronchitis		12
Dysentery		10
Dislocation and displacement		10
Rheumatic fever		9

The invaliding rate shows no significant change, the slight fall that has occurred was due to a decrease in the number of invalids for middle ear disease and deformities of the feet

The average number constantly sick in hospital was 1,693.47 or 30.44 per 1,000 of the strength, compared with 29.04 per 1,000 in 1928, 29.18 in 1927 and 29.68 in 1913

81,437 men, or 1,454.0 per 1,000 of the strength were treated as out-patients, with an average daily number under treatment of 1,105.87 or 19.88 per 1,000

The combined ratio constantly sick in hospital and under treatment as out-patients was 50.33 per 1,000 of the strength, compared with 48.97 in 1928

The actual loss to the army in India in working days was 618,116 due to sick in hospital and 408,642 due to sick in barracks, making a total of 1,026,758 days compared with 970,000 in 1928

HEALTH OF THE INDIAN ARMY FOR THE YEAR 1929

	Average strength	Admissions		Deaths		Invalids sent to U K		Invalids discharged in India		Average constantly sick	
		No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000
Kings Commissioned Officers	2106	690	282.5	94	27	83	80			24	99
Indian Banks	128,329	57,886	449.0	440	3.41			1,314	10.19	2,164	20
Followers	24,050	10,305	302.6	161	4.70					3,09	20
Others *		2,057		19				53			

* Includes Reservists Indian Territorial Force, Royal Indian Marine, Indian State Forces R. A. F., Officers and Pensioners

57,886 or 449.0 per 1,000 of the strength were admitted to hospital compared with 371.1 in 1928. There is thus an increase of 77.5 per 1,000 compared with the 1928 figures.

Malaria was responsible for the great increase in the sick rates and it will be seen later that the incidence was practically entirely confined to certain limited areas in the Northern Command. Sandfly fever and dysentery also show an increase but these are more than counterbalanced by decreases in dengue,

influenza, minor septic diseases, bronchitis, pharyngitis and mumps.

The record death rate for Indian Troops in 1928 namely 2.84 per 1,000 has unfortunately not been maintained. The rate rose in 1929 to 3.41 per 1,000, an increase of 0.57. This increase may be ascribed to the debilitating effects of malaria in favouring the onset of and adversely affecting the result in such diseases as pneumonia and tuberculosis of the lungs.

LEPROSY IN INDIA

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. In 1921 when the last Census was made, leprosy was regarded as a *stigmata* like blindness, insanity and deaf mutism, and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 100,000 in 1911. But it is doubtful if this figure represents anything more than the more advanced cases and possibly a majority of this number are the beggars and pauper lepers who are seen all over the country. Dr E. Muir M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, says that recent figures obtained from a carefully conducted but limited survey tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy.

Early in the year 1924 the British Empire Leprosy Relief Association was constituted in England with H. E. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy.

on the date of the inauguration of the Indian Council which was closed after a year with realisations amounting to over Rs 20,00,000 which was invested in the end of 1923. The investments amounted to Rs 20,63,085 yielding an annual revenue of over Rs. 1,22,000

In the scheme of anti-leprosy campaign which the Association has put into operation, the respective parts to be played by the Central and Provincial Committees in carrying forward the aims and objects of the Association are definitely apportioned. The Central Committee is vested with the task of promoting research, of preparing and publishing propaganda material arranging for the training of doctors in the diagnosis and treatment of leprosy according to the latest methods and of conducting an expert survey of selected areas for the ascertainment of the facts regarding the incidence and endemicity of leprosy. Measures for the accommodation and treatment of leprous patients and other schemes of purely local interest are to be the concern of provincial committees as agents of the Indian Council in the Provinces.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees are expressed in its Memorandum on the method of conducting the anti-leprosy campaign in India which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest —

(1) Pauper lepers form only a small fraction of the leper population and the disease is common among all classes of the community

(2) Segregation is not the most appropriate method of dealing with lepers, for

(a) financially it would be impossible,

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recom-

mended that the efforts of the Provincial Committees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects —

(a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable, and so

(b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generation will become fewer.

The report of the Association for 1930 shows that the Central Committee spent, during the last six years, Rs 1,01,783 on the promotion of medical research under Dr E. Muir and FRCS, at the School of Tropical Medicine and Hygiene, Calcutta. Rs 57,723 on the training of doctors in the diagnosis and special treatment of leprosy. Rs 49,287 on propaganda. Rs 66,476 on Survey, and distributed Rs 2,97,752 to the Provincial Branches. Special emphasis is laid on the importance of survey. There are four different aspects of the survey which are all of great importance. In the first place there is the survey proper. In 1928, Dr Muir made a short survey of certain endemic areas in the Central Provinces and the Bombay Presidency and the important data which he then collected impressed upon the Central Committee the necessity of conducting surveys of selected areas throughout India in order that the true position of the country in regard to the various important factors of the disease may be understood and the campaign be directed in the light of the experiences thus gained. The Committee is of opinion that the survey is playing and will play an important part in helping the problem of leprosy to be studied in its true perspective. In the second place the survey party is training more doctors on the spot. Thirdly comes the establishment of clinics in the provinces where the knowledge gained by the doctors trained, whether at Calcutta or elsewhere, can be put to practical use. Finally it is impossible to over-estimate the value of this part of the campaign in stimulating interest among the authorities concerned as well as among the public in the work as a whole and in demonstrating the great potentialities of the campaign. The results which are being obtained are of a nature which will ultimately benefit all the Branches.

His Excellency the Viceroy is the President of the Indian Council, the Hon. Sir Henry Moncrieff Smith, Kt., C.I.B., I.C.S., the Chairman of the Executive Committee, Sardar Bahadur Balwant Singh Puri, the Honorary Secretary and Sir Ernest Burton, Kt. C.B., C.I.B., I.C.S., the Honorary Treasurer.

BLINDNESS IN INDIA.

All over the East, and in fact in most tropical and sub-tropical countries blindness is very prevalent, and only of recent years have people begun to realise that much of this blindness can be relieved and still more of it if not most of it could, with proper measures taken be prevented. In Egypt, renowned for its sufferings from blindness it was a gift of some £43 000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service which began under the guidance of Mr MacCallan has now spread all over the country and gives medical treatment to three or four hundred thousand patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great trachoma belt extending from China into Eastern Europe, stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained.

India is in this great Blindness Belt. According to the last census returns there are 480 000 totally blind persons in this population of more than 300 millions. That is an incidence of 1½ totally blind to every thousand of the population. But the census figures are notoriously defective, and in several districts a special count has been made of the totally blind and wherever this has been done, the census figures have been found to be much too low. Thus in the Nasik district an incidence of at least 4.38 per thousand was found as against the census figure of 1.74. In Bafnagid an incidence of 1.5 was found as against the census figure of 0.7. In Bijapur 2.6 as against 0.7. In the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Palampur 7 per thousand was found. If as is not unlikely this sort of error of under-estimation in the census report is general, then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 1½ millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture for they include only totally blind of both eyes and say nothing of the much greater number who from neglected eye diseases are partially or even nearly blind and whose happiness and efficiency are thus greatly impaired. The term blindness has a different interpretation in every country. In a report on the Prevention of Blindness published by the League of Red Cross Societies these different interpretations are shown. In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses, or for illiterate, inability to distinguish forms and objects with sufficient distinctness, and in Egypt a

person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated above. Recently the All-India Blind Relief Association has made an analysis of a very large number of patients attending its camps and dispensaries and has found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million total blind persons, and in addition to these four and a half million with more or less impaired eyesight.

"No one," says Col R. H. Elliot, late of the Madras Ophthalmic Hospital, writing in the British Journal of Ophthalmology of May 1919 who has not worked in India can form any conception of the enormous amount of preventable and curable blindness which is laying its shadow over the health, happiness and usefulness of this great portion of our Empire and the same writer in another place has said—

It is difficult for anyone who has not had first hand experience of medical practice in the East to realise the state of things out there. Granular ophthalmia claims its victims by the ten thousand whereas it is really a disease which, when properly treated at an early stage, should not cause the loss of a single eye. The neglect of patients suffering from small pox and other febrile conditions leads to a vast amount of blindness, while the treatment of mild ocular affections by irritant drugs is probably one of the most evil factors that spread blindness broadcast throughout the land. Large numbers of men and women suffering from cataracts, from cataract and from other curable diseases, are allowed to hide in their villages like wounded animals waiting only their release by death. This is not an overdrawn picture. It is a statement of cold, hard, cruel facts well known to everyone who has practised or is practising medicine in the East.

In an editorial on the Ophthalmic work in Egypt and the possibilities of similar work in India the *Indian Medical Gazette* (March 1923) remarks—It would seem worth while for the Government of India to examine the working of this splendid organisation for in spite of the fact that workers in India have always been in the front in advances in ophthalmology there has been little organised work in ophthalmic research except in Madras, even there the work has been done by men who have already a large amount of routine work to perform. India as a whole owes its position in the ophthalmic world entirely to the energies of individual enthusiasts whose names are so well known that it is not necessary to mention them. What has been possible in Egypt should also be possible in India and it would appear that the first step should be the establishment of Schools of

Ophthalmology. In places like Madras and Calcutta where ample facilities exist. At these schools advanced teaching and research in ophthalmology would be carried out, and the next step would be to organise a system of ophthalmic relief at selected centres all over India. (There are now schools of ophthalmology at Madras, Bombay, Calcutta and Lahore)

Again in an editorial from the same journal (Sept 1929) the following statements are made—

What is wanted is some large organisation covering the whole of this sub-continent and aiming chiefly at **Prevention rather than treatment**

In brief what the position now calls for is an all India movement. Obviously the main question is one of general public health. Public health is a transferred department but if the Health Department of the Government of India interests itself in the matter in co-operation with missionary and voluntary movements we do not despair of seeing an all India organisation created and built up

Associations known as "**Blind Relief**" Associations have been working for several years in Western India in conjunction with Government hospitals to alleviate this affliction of blindness. The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns. The Associations work by means of travelling hospitals which bring relief to the villages in the rural areas. They also work by means of trained village workers whose duty it is to find out the hidden blind and get them to the medical centre for relief. To find out cases of small pox (a constant source of blindness in children), to inspect new born children for the detection of ophthalmia neonatorum to keep registers of all blind and partly blind persons and persons suffering from eye disease and to treat in the villages simple cases of conjunctivitis or sore eyes. Since their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown. In 1917 Colonel Elliot wrote as follows. To me it seems that the duty and privilege of undertaking this work lie with the State and that no sum spent on such a task could be too large. Unfortunately this is not the view that has been taken by those

in authority and consequently we see the spectacle of private enterprise endeavouring to undertake this colossal task.

It is at least permissible to voice an admiration for the stand taken by Mr Henderson [Founder of the Blind Relief Association movement who began the work in 1918]. The best that one can hope for his endeavour is that he will succeed in arousing the conscience of educated Indians to the needs of their less fortunate countrymen and that this little cloud no bigger than a man's hand will end in a monsoon of active effort. As the above was written in 1917 it is not altogether applicable to the criticism of Government of to-day as it has already been shown that there are now several schools of ophthalmology in India, and the Government eye hospitals are doing tremendous work but these hospitals are situated in the large towns and cannot possibly by any stretch of imagination give relief to the millions living in the rural areas.

The All-India Blind Relief Association.—(The Green Star Society) exists to co-ordinate and centralise the various Associations in the mofussil and to extend their work. It is under the patronage of the Governor of Bombay and has for its life President Mr C G Henderson (late I C S) who founded and managed for many years all the branch Associations working in Western India. It is affiliated to the International Association for the Prevention of Blindness, which has its headquarters in Paris and was formed on September 14th 1929 under the auspices of the League of Red Cross Societies and the American Society for the Prevention of Blindness. The organising Secretary is R Crawford Hutchinson, The Town Hall Bombay.

A beginning has been made but it is only a beginning and it is but the fringe of this vast problem that has been touched. The schools of ophthalmology in India are turning out ophthalmic surgeons who are crowding their profession in the cities and large towns. A scheme for taking these men and placing them in selected centres has been worked out all that is required is monetary help. The cost is minimal and here is an opportunity for the generous and public spirited to emulate Mr Ernest Cassel and give to India an eye service of which India and the whole world could be proud and to the peoples of India that which to them is probably their most precious possession—their sight.

THE MATERNITY AND CHILD WELFARE MOVEMENT

Amongst the most pressing problems of India a health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known but they are certainly not less than 10 per thousand live births, often more. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement which owes much to the All India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a net work of child welfare centres in most of the larger towns in India. The amalgamation of these two bodies which has taken place forming the Maternity and Child Welfare Bureau will undoubtedly increase and develop the work. In all the great centres of population work is now being done for the training of midwives for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field that a consistent widespread effort on a scale hitherto impossible must be undertaken if any appreciable reduction is to be made in the appalling mortality of young children.

Centres of Activity—These may be most conveniently grouped under provinces though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

Bombay Presidency—In Bombay (My two organisations are at work mainly that under the Corporation and a voluntary society. Both employ medical women and health visitors who conduct clinics and do home visiting. The Corporation also staffs and runs a number of small maternity homes which are much appreciated by the people. Indeed an outstanding feature of maternity work in Bombay is the number of confinements which take place in hospitals. The wretched housing conditions and poverty of the people however carry off a very large proportion of the infants which are safely reared into the world by the care of the hospitals. Organised child welfare work is unfortunately largely limited to the Presidency capital. In other places the development has rather been in the direction of the establishment of small maternity homes which are mostly very flourishing and do excellent work.

Propaganda work has been very energetically carried on by the Bombay Presidency Health and Baby Week. This organisation supplies literature, posters, magic lantern slides and even drama films for health teaching and arranges for local baby weeks throughout the Presidency. The work of the Seva Sadan Society at Poona is remarkable for the encouragement it has given to education for the profession, medicine, nursing and public health. Without such trained personnel, progress would be repeatedly held up. The Karachi Branch of the Indian Red Cross Society has appointed a trained woman organizer for touring the districts of Sind a region where the infant mortality is alarmingly high. The Dals Improvement has done a remarkable work in training indigenous midwives in and around Hyderabad. Sind. The welfare work of the I. B. & C. Railway is making progress, a good many centres have been established and their efficiency is increasing.

Bengal—Here again the major portion of the child welfare work is carried on at the capital. Efforts are being made to spread the work into the districts but progress is very slow. In Calcutta the Corporation carries on an extensive work supplying trained midwives to the homes of the poor. The infants thus brought under the care of the scheme are followed up by a system of home visiting. The Indian Red Cross Society has several child welfare clinics a feature of which is the supply of milk for children free or at low cost. Besides this the Society is largely responsible for the Health visitors training school, to which the local government has as yet given no aid. In three of the big jute mills centres are now established and it is hoped that further progress will soon be made in this direction. The work in Dacca progresses well and nearly half of the infants born are under the care of the scheme.

Madras—The child welfare scheme of the Corporation continues to develop. There is a danger that the desire of the people for medical aid will interfere with the truly preventive nature of the work and the supply of medicines should be cut down. A large amount of milk is supplied free or at less than cost price to the poorer citizens. The Corporation midwives attend a very large number of confinements yearly. The Maternity and Child Welfare Association runs a number of centres which do good work. This Association has now become part of the Red Cross Society, and it has re-started its Health visitors training school under new auspices. It is hoped that the Government will soon recognise the value of the work sufficiently to give the school financial aid.

In the Madras Mofussil a good many centres are at work some under municipalities or district boards and some under voluntary societies. This work is not of as high quality as one could wish and needs the directing hand of an expert. This has been provided by the appointment of an Assistant to the Director of Public Health whose special work is to inspect, control and encourage child welfare schemes.

Central Provinces—In these provinces the Child Welfare Division of the Red Cross Society receives a considerable grant from Government for the support of child welfare schemes in the various towns and districts. There is a great demand for these, and fortunately the demand can be met since the presence of a Health School provides the necessary number of Health visitors. The work is excellently organised and it appears probable that the health workers in the province may be formed into a proper cadre in the not distant future. The Health School is entirely maintained by Government.

The high degree of organisation shown in a province usually regarded as backward is remarkable and is due mainly to the enthusiasm of the Secretary who though not a paid worker devotes a great deal of time to the work.

United Provinces—In these provinces the work is organised by a medical woman a member of the W. M. S. who is assistant to both the Inspector-General of Civil Hospitals and the Director of Public Health. As a result the work has made rapid progress and many centres are at work. The training school at Lucknow supplies the workers. Government gives extensive grants to the committee of management which is a sub-committee of the Indian Red Cross Society. There is also a midwives training school which trains large numbers who go to work in the districts subsequently. Baby and Health Weeks are also celebrated with aid from headquarters.

A course of training in Health work for women Sub-assistant Surgeons was commenced in 1931 a diploma is granted by the State Medical Faculty U. P. This course supplies a long felt want for training medical women to do maternity and child welfare work.

The Punjab—The work here is perhaps more directly official than in any other province. An Inspector of health centres works under the Director of Public Health who constantly tours and inspects the centres giving much advice and encouragement. The local management of centres is usually in the hands of voluntary committees which receive grants in aid both from the provincial Government and local bodies. Though the province is passing through a time of financial stress the principle of grants in aid is recognised and will be adhered to. The training school for health visitors is wholly undertaken by the provincial government. The high quality of the work done in the various centres is mainly due to the excellent training received at the school.

Assam—There is no organised work on the part of the provincial government though in a few places an effort is being made to start it. The poverty of the province, the poor education of the women and the nature of the country make progress very difficult.

Bihar and Orissa—This is also a poor and backward province, but a beginning has been made at Patna and Cuttack with the appointment of Maternity supervisors to control the work of indigenous *dais*. In the coal mine areas after many years of hesitancy a start has been made which should lead to great activity and

corresponding benefit to the people. Health visitors are also at work in one of the most important of the Orissa Feudatory States.

Delhi—The work in Delhi was started early in the history of the movement and it has been carried on in a manner worthy of the seat of Government. The Municipality employs a medical woman who superintends the work under the Medical Officer of Health. Centres are placed strategically throughout the city the indigenous midwives are taught and controlled and medical inspection of school children is carried on. New Delhi and the district are under the Medical Officer of Health. New Delhi is also the seat of the oldest Health School in India which is mainly supported by the Maternity and Child Welfare Bureau and which turns out well qualified health visitors every year as well as running two welfare centres.

North-West Frontier Province—Practically the only civil work is carried on at Dikra Ismail Khan. This was started some years ago and has continued to flourish. A provincial *dais* training school is found here which provides for the training of *dais* from various districts of the province.

Baluchistan—At Quetta the maternity work of the city has resulted in very complete control of the indigenous practising midwives to the great advantage of the people.

Rajputana—The Maternity Home, Ajmer, trains midwives for many of the States and a certain amount of child welfare work is also carried on. Child welfare work is in existence at Jaipur and Nairabad and there are possibilities latent in the various states which good organisation could develop.

Child Welfare in the Army—The care needed by the wives and children of *sepoys* is being increasingly realised and nowhere more than in the units themselves. The result has been in the last few years the opening of much work in this direction. Much of it is purely medical work, which in the absence of families hospitals for the Indian soldiers is a necessity. But genuine child welfare activities are also present in some centres many of them created by the M. & C. W. Bureau Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, undernourishment, epidemics and famines. In Western

lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air

playgrounds, etc., etc. But these are not yet its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly under-developed, incompetent citizens.

INDIAN RED CROSS SOCIETY

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1918 an invitation had been received to join the International League of Red Cross Societies having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted thus giving India a distinct position in a world wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilisation for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible for civil purposes. As contemplated in the Act, of Constitution of the Society its activities are completely decentralised, and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of the Society may be spent are—

1 The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised

2 The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not

3 Child welfare

4 Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them

5 Assistance required in all branches of nursing, health and welfare work, auxiliary to any organisations which have or may come into being in India and which are recognised by the Society

6 Home Service Ambulance Work

7 Provision of comforts and assistance to members of His Majesty's Forces whether on the active list or demobilised

The Society has five grades of subscribing Members: namely Honorary Vice Presidents, Patrons, Vice Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150 and any thing between Rs. 1 and Rs. 5 annually or consolidated payment of Rs. 50. At the end of 1920 there were 19,993 adult members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations of a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces are now following suit and at the end of 1920 the Society had a total Junior membership of 84,000.

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-Presidents nominated by Provincial or State Branches, 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is the Hon'ble Sir Henry Mowbray Smith, Kt., C.B., I.C.S., and the Organising Secretary, Miss Norah Hill, M.B.E.

Finances.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,83,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December 1920, stood at a capital investment of the face value of Rs. 67,53,000-0-0. The income derived from the capital of the Society, (which is 3½ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central Our Day Fund. A sum of Rs. 2,70,000-0-0 was so distributed to the Provincial Branches under this arrangement during the year 1920.

ST JOHN AMBULANCE ASSOCIATION

(Indian Council)

The St John Ambulance Association was founded in 1877, by the Order of the Hospital of St John of Jerusalem in England, and has for its objects —

(a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured

(b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation especially of a sick room

(c) The manufacture and distribution by sale or presentation of ambulance material and the formation of ambulance depots in mines, factories, and other centres of industry and traffic

(d) The Organisation of Ambulance Corps Invalid Transport Corps, and Nursing Corps

(e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class nationality, or denomination

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued 1 80 703 certificates of proficiency in First Aid Home Nursing Home Hygiene and

Sanitation and 9 602 tokens such as Vouchers Medallions Labels and Pendants for special proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man and the subject matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits

In 1930 the Indian Council spent Rs 70 094 in furthering its objects and closed the year with Govt securities of the face value of Rs 70 000. The Association has five grades of members namely Patrons, Honorary Councillors Life Members Annual Members and Annual Associates. Their respective subscriptions are Rs 1,000, Rs 500, Rs 100, Rs 5 and Rs 2

Their Excellencies the Viceroy and the Countess of Willingdon and His Excellency the Commander in Chief as President Lady President and Chairman respectively, with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Honble Sir Henry Mounier Smith Kt CIE ICS is the Chairman Mrs Norah Hill ARSO the General Secretary and Sir Ernest Burdon Kt CIE, CIE ICS the Honorary Treasurer

INSANITY AND MENTAL HOSPITALS IN INDIA

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States the condition of affairs is even worse for, with the sole exception of Mysore State which has a small and highly archaic 'mental hospital' at Bangalore there are no mental hospitals in existence so that persons suffering from all forms of mental disease are confined in the Jails where, of course, no provision exists for any kind of treatment. According to the last Census (1921) out of a total popula-

tion of 318 942 480 (India and Burma) there are 86,305 persons insane making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the feeble-minded, an item that is not included in the figures for British India,

INDIA

Provinces, States and Agencies		General population			Insane population.		
		Male	Female	Total	Male	Female	Total
Provinces under Administration	British	189,243,123	131,707,310	270,950,433	44,873	28,234	72,907
States and Agencies		24,752,431	23,239,616	47,992,047	9,478	5,920	15,398
Total for all India		183,995,554	154,946,926	318,942,480	54,151	34,154	88,305

For the care of the 88,305 insanies of India and Burma there exists accommodation in mental hospitals for 6,750 hence only one person in ten out of the total insane population can obtain accommodation in institutions which exist

especially for their care and treatment.

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number discharged cured and died —

Province	No of Mental Hospitals	Admitted and readmitted during the year	Total Population of Mental Hospitals			Discharged cured	Died	Daily average		Criminal Lunatic
			Male	Female	Total			Strength.	Sick	
Assam	1	66	410	95	505	21	47	438 47	59 35	240
Bihar and Orissa	2	364	1,535	398	1,933	205	53	1,004 49	74 68	614
United Provinces	2	779	1,561	412	1,973	174	106	1,274 83	155 03	425
Punjab	1	397	982	262	1,244	132	102	889 88	73 63	207
Central Provinces	1	87	389	95	484	33	19	410 96	20 37	136
Bombay	5	606			2,106	237	171	1,534 20	98 7	226
Madras	3	469	1,250	307	1,512	143	80	1,105 29	135 89	194
Burma	2	276	1,111	180	1,330	88	58	1,025 55	44 06	564
Total	18	3,046			11,040	838	830	8,300 67	656 71	2,601

It will be observed that there is now no mental hospital in Bengal. Insane from this province are treated in one or other of the two mental hospitals at Ranchi. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over by the Commissioner of Chota Nagpur. The so-called Central Mental Hospitals, that is to say the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rangoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole-time medical officers who are usually trained alienists. The Administration of the remaining Mental Hospitals in British India and Burma lies with the Civil

Surgeon of the locality in which they happen to be situated. It is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up-to-date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over-crowded and under-staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing, in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

As regards the incidence of insanity among the various races of India as well as the incidence of insanity in relation to occupation, no reliable information is available in view of the comparative paucity of cases in proportion to the general

population that come under observation. On the other hand the incidence by age is shown fairly well in the Census Report of 1921 which is as follows:—

INDIA

AGE	Insane.		Distribution of the insane by age per 10,000 of each sex.	
	Male.	Female.	Male.	Female
YRANS				
0-5	651	484	121	142
5-10	2,906	1,882	539	553
10-15	4,098	2,733	761	803
15-20	4,366	3,076	810	904
20-25	5,518	3,370	1,024	993
25-30	6,861	3,582	1,273	1,053
30-35	7,231	3,849	1,342	1,131
35-40	5,651	2,949	1,049	867
40-45	5,318	3,486	987	1,025
45-50	3,332	2,157	616	634
50-55	3,132	2,402	581	733
55-60	1,465	1,036	272	305
60-65	1,683	1,471		
65-70	602	439		
70 and over	1,070	1,006		
Unspecified	270	133		
Total for all India	54,151	34,154	623	857

A further result of the widespread ignorance and apathy both official and non-official, towards psychiatry and its cognate interests, is the lack of any provision for the care and treatment of mentally defective children. In 1923, the Hon'ble Haroon Jaffer moved the Council of State to recommend to the Governor-General in Council that the Provincial Governments be asked to investigate the best means of dealing quickly and adequately with cases of mental defectives. A discussion followed which was remarkable only for the ignorance of the subject displayed by all who took part in it. The motion was eventually withdrawn.

Finally there is still a lamentable failure everywhere to appreciate the intimate associa-

tion of crime with mental disorder and the extreme paucity of medical men throughout the whole of India, with any real knowledge of mental diseases leave the decision of questions involving what the law terms responsibility in crime in the hands of medical men who are to no sort of sense experts. In other words the current ideas both as regards the theory and practice of dealing with insanity and crime in India can only be described as archaic.

(See also "Insanity in India" by Colonel G F W Ewart, I.M.S., and Lunacy in India by Colonel A W Overbeck Wright, M.D. D.P.S. I.M.S. and Colonel H P Jago Shaw, M.D.)

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the women of India was founded by the Countess of Dufferin in 1885 the object being to open women's hospitals and women's wards in existing hospitals, to train women doctors, nurses and midwives in India, and to bring these out when necessary from Europe. An endowment fund of about 4 lakhs was obtained by public subscription. In addition Branches were formed in each Province each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial Branches, it gives scholarships to a number of women students at the Medical schools of Bombay Calcutta Madras and Delhi. It has in the past brought from England a certain number of European medical women.

It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs 3,44,306 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers with a training reserve of 8 doctors and a Junior service of 6 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H E The Countess of Willingdon, C.I.B.M. The Joint Secretary is the Surgeon to H E The Viceroy, and the Secretary Dr M V Webb C.M.O., W.M.S. Red Cross Building, New Delhi and Vice-regal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA

This Service is included in the National Association for supplying medical aid by women to the women of India generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of Rs 25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (a) in India by a medical sub-committee of the Council which includes the Director-General Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service, (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (b) Must be between the ages of

twenty-four and thirty at entry. (c) She must be a first-class medical woman, i.e. she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act, but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who in the opinion of the Council are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service ladies not possessing the above qualifications but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies or to special institutions which may be responsible for whole or part of the pay.

Pay—The rates of pay are as follows—

1st to 3rd year	Rs 450 per month
4th to 6th "	500 "
7th to 9th "	550 "
10th to 12th "	600 "
13th to 16th "	650 "
16th to 18th "	700 "
19th to 21st "	750 "
22nd to 24th "	800 "
24th and after "	850 "

also an overseas allowance of Rs 100 per month to those below 12 years' service and Rs 150 per month to those of 12 years' service and over. Every officer of the Service shall pass an examination in such vernacular as the Executive Committee shall appoint within the first three years of her service, and shall receive no increment after that period until such examination has been passed. In addition

furnished quarters are provided free of rent or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of fifty five. An officer recruited in England whose appointment is not confirmed or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(a) Casual leave, which is occasional leave on full pay for a few days and is not supposed to interrupt duty. (b) Leave on average pay is granted up to 2-11 of an officer's period on duty according to Fundamental Rules. More than eight months leave on average pay is not granted at one time. (c) Study leave may also be granted up to twelve months during the whole service. An allowance of 12 sh per day is granted in addition to the average pay during study leave. (d) Extraordinary leave at any time at the discretion of the Executive Committee. (e) Leave not due may be granted subject to the following conditions—(i) on medical certificate, without limit of amount and (ii) otherwise than on medical certificate, for not more than three months at any one time and six months in all reckoned in terms of leave on average pay. (f) The maximum period of continuous absence from duty on leave granted otherwise than on medical certificate is 18 months. (g) When an officer returns from leave which was not due and which was debited against her leave account, no leave will become due to her until the expiration of a fresh period spent on duty sufficient to earn a credit of leave equal to the period of leave which she took before it was due. There are no allowances during extraordinary leave. A doctor appointed in England receives a sum of £100 to cover her passage and incidental expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also a Provident Fund each member contributing monthly thereto ten per cent of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent per annum, "or at such rate as the Council can invest without risk to the funds of the Association."

An officer loses the contributions made to her account by the Association with the interest thereon if she resigns (except on account of ill health) before completing five years' service or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

Free Passages.—Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all India services. The maximum number of return passages granted during an officer's entire term of service must not exceed four the first falling due after 4 years' service.

The Training Reserve of the Women's Medical Service.—This Service has a sanctioned cadre of eight and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs 200 to Rs 300 per month with furnished quarters or the equivalent in money, to those employed in India.

Two of the eight members of the reserve but not more at any one time may be deputed to Europe by the Executive Committee for post-graduate training and shall receive a stipend at the rate of £200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.

Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903 in order to secure a certain amount of improvement in the prevailing standards of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who

have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. The fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College staffed entirely by women and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment.

Thirty lakhs of rupees in all have been given for these purposes mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914 it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder and be called by her name.

The Governing Body includes the Director General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service a representative elected by the All India Association of Medical Women, the Surgeon to H M the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Director General Indian Medical Service. The Deputy Accountant-General, Central Revenues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 100 Medical students and 70 nurses and residences for the medical and teaching staff, occupy a site of 50 acres in New Delhi (Raisina) within easy reach of the old city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot however, be guaranteed in the case of students. As the hospital patients are all women or children it is for example, necessary that students should, in their final year attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu Moslem, Sikh and Christian students. The hospital is a fine modern building with accommodation for 200 in-patients and a commodious out-patients' department. The College and Hospital are supported by a grant of Rs. 3,11,000 from the Government of India supplemented by grants from Provincial Governments and Indian States. Students are prepared for the Intermediate Science Examination and the M.B., B.S. degree of the Punjab University with which the College is affiliated.

SENIOR STAFF

Principal and Professor of Midwifery and Gynaecology—Dr O'Brien Broadon M.B.S. (Lond), L.S.M., M.D., Ch.B. (Glas), Women's Medical Service.

Vice-Principal and Professor of Surgery—Miss Hamilton Brunne, M.B. Ch.B. (Syd.), D.T.M. (Calcutta) W.M.S.

Professor of Medicine—Miss K.E. Trouton, M.B. B.S. (Lond) M.C.S., L.E.C.P.D.T.M. (Calcutta).

Professor of Ophthalmology—Miss R. Roulston M.B. Ch.B. (Glas), D.D. (Oxon), B.E.C.S. (Edin) W.M.S.

Professor of Pathology—Mrs L.S. Ghosh M.B. Ch.B. (Aberdeen) D.P.H. (Cambridge) W.M.S.

Professor of Anatomy—Miss K.J. McDermott M.B., B.S. (Punjab) W.M.S.

Professor of Physiology—Miss E. Surie M.Sc.

Professor of Radiology—Dr Bekki M.B.S. (Ph) D.M.S. & E. (Calcutta).

Lecturer in Physics and Mathematics and Superintendent of the Science Department—Miss J.H. Ross M.A. B.Sc. (Glas).

Lecturer in Chemistry—Miss Soabehla Ram, M.A. (Calcutta).

Lecturer in Biology—Miss C.C. Bart, B.Sc. (Edin).

Lecturer in English—Miss Ebbott M.A. (Dublin) Modern Language Tripos (Calcutta).

Bursar and Warden—Miss M.W. Jackson, M.A. (Calcutta).

Attached to the Hospital there are (1) a Training School for Nurses and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendents Lady Hardinge Medical College Hospital Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step further, through the establishment of the Bombay Presidency Nursing Association, at St George's Hospital, Bombay. This is composed of representa-

tives of the various Nursing Associations in charge of individual hospitals and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Nursing Bodies.—The Secretary of the Calcutta Hospital Nurses Institution is Mr A. R. Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing Bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4 Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Ruess Road South, Nurses' Academy, 6, Suburban Hospital Road, and Nurses Bureau, 37, McLeod Street. In Madras there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gacha Hospital at Kilpauk, the Royapettah Hospital and the Ophthalmic Hospital, also the Lady Amphilil Nurse Institute and the South Indian Nursing Association (now amalgamated). President Hon. Excellency Lady Gooch. The Association has under its management—*The Lady Amphilil Nurse Institute*, Western Caste Mount Road, Madras. Fully trained and experienced nurses for all cases of illness both among Europeans and Indians, always available. *The Lady Wellington Nursing Home*, Western Caste, Mount Road Madras, and *Nilgiri Nursing and Convalescent Home* Ootacamund, for Medical, Surgical and Maternity cases. The Nilgiri Nursing Home affords admirable facilities for convalescence.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards to other hospitals in the Presidency. Ultimately the Government laid down a definite principle with regard to the financial aid which they would give to such institutions agreeing to contribute a sum equal to that raised from private sources. Afterwards as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their work. This Association was incorporated under the Societies Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association, and under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function of the examining and granting certificates to nurses and midwives, and maintaining a register of qualified nurses and midwives and also maintaining a Provident fund for the employees of the affiliated associations have been successfully carried out from 1911 to 1933. Memorandum, Rules and By-laws of the Association were however revised brought into line with the

actual working of the Association. Towards the end of 1927, the Committee decided that some steps must be taken to do so and accordingly appointed a sub-committee to consider the revision and amendment of the Memorandum, Rules and By-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the present rules piecemeal and that the only way to put things in order would be to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report the Committee agreed that the Association be incorporated by an Act on the lines of the Registration Act in the United Kingdom. Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from 1st April 1929.

The following are affiliated associations as well as Training Institutions—

St. George's Hospital Nursing Association, Bombay, (for nurses only), Hon. Secretary B. W. Douglas Esq.
Jamshetji Jijibhoy Hospital Nursing Association, Bombay, (for nurses and Midwives), Hon. Secretary Dr M. V. Mehta, O.B.E., F.R.C.P.

Goduldas Tejpal Hospital Nursing Association, Bombay (for nurses only), Hon. Secretary B. D. Fraser, Esq.
Cama & Ables Hospitals Nursing Association, Bombay (for Nurses and Midwives) Nil. This is now purely Govt. institution.
Saseoon Hospital Nursing Association, Poona, (for Nurses and Midwives) Nil. This is now purely Govt. institution.
Karachi Civil Hospital Nursing Association (for Nurses only), Hon. Secretary D. N. O. Sullivan Esq.

Civil Hospital Nursing Association, Naalk (for Nurses and Midwives) Hon. Secretary Civil Surgeon, Naalk.
Civil Hospital Nursing Association, Ahmedabad (for Nurses and Midwives) Hon. Secretary Civil Surgeon Ahmedabad.
Victoria Nursing Association, Sholapur (for Nurses and Midwives) Hon. Secretary Civil Surgeon Sholapur.

The following are only affiliated Associations but not Training Institutions—

Ahmednagar Civil Hospital Nursing Association, Hon. Secretary Civil Surgeon, Ahmednagar.

Bijapur Civil Hospital Nursing Association, Hon. Secretary Civil Surgeon Bijapur.
Byramji Jijibhoy Nursing Association, Mathuran, President Lt Col M. S. Iran, I.M.S.

Dharwar Civil Hospital Nursing Association, Hon. Secretary Civil Surgeon Dharwar.
Kanara Nursing Association, Karwar, Hon. Secretary Civil Surgeon, Karwar.
Panch Mahals Nursing Association, Godhra, Hon. Secretary Civil Surgeon, Godhra.
Prince of Wales Nursing Association, Adan, Hon. Secretary I. Taylor, Esq.

The following are recognised Training Institutions—

V. J. Hospital, Ahmedabad (for Nurses and Midwives).
State General Hospital, Baroda for Nurses and Midwives.)

Civil Hospital, Belgium (for Nurses and Midwives)
 King Edward VII Memorial Hospital, Parel Bombay (for Nurses only)

Provision for retiring allowances is made for all members on the basis of a Provident Fund and a Nursing Reserve has been established for employment in emergencies such as war pestilence or public danger or calamity

Address.—The Registrar Bombay Nursing Council Old Custom House, Fort, Bombay

Lady Minto's Indian Nursing Association—In 1906 this Association was inaugurated replacing the Punjab and W. country Nursing Association for Europeans in India, which society, established in 1892, had accomplished much useful work in this country. Owing however, to lack of funds it was found impossible to continue its administration and to carry out the expansion of the work so urgently called for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lytton, Lady Helen Munro Ferguson and Mrs. Cottrell, while Mrs. Shepherd, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organisation but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association recognising the need for expansion, consented to take over the

present Association and approached Lady Minto before she left England in 1905 for co-operation towards this project, and after much consideration and discussion with the Government of India, Lieut. Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto addressed to the public both in England and India, was responded to most generously, and sufficient funds were collected to form an endowment fund which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated the rates of subscriptions being really an insurance against illness. Her Majesty the Queen is a Patron of the Association. Her Excellency The Countess of Willingdon is President of the Central Committee in India.

Hon. Secretary Malov F. M. Collins, M.A. M.C.
 Hon. Treasurer W. B. Tinnant, Esq. I.O.S.
 Chief Lady Superintendent Miss G. Bennett. Address.—Central Committee, L.M.I. A. Viceregal Lodge, Simla, and Red Cross Building, New Delhi.

Hon. Secretary, Home Committee—Vacant
 Secretary, Home Committee Miss M. B. Ray B.A. 10, Witherby Mansions, Marl Court Sq.

Nurses Organizations—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses Association of India and has the one set of officers. The Trained Nurses Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting esprit de corps among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 472 including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses Association was started in 1905, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the International Council of Nurses.

President Mrs. G. D. Franklin, 33, Rajpura Road Delhi.

THE WOMAN SUFFRAGE MOVEMENT

Hon. Secretary and Treasurer Miss Gadsden,
General Hospital, Madras

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses by the necessity for the presence of the wife at all ceremonies performed by a Brahmin by the idea of the sacred mystery of womanhood implied by the purdah and by the general veneration of motherhood. Secondly the time was psychological for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the Municipal franchise had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seat in Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater

number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic All India Women's Deputation which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation.

Our interests, as one half of the people, are directly affected by the demand in the United (Hindu Muslim Reform) scheme (I. 8) that 'the Members of the Councils should be elected directly by the people on as broad a franchise as possible, and in the Memorandum (3) that the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that a full measure of Local Self Government should be immediately granted we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens, and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made

though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of the inclusion of women in the new franchise.

After the introduction of the Government of India Bill into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Vaidya and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one "or Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution, in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years time limit. Until after that period women were ineligible for election as Legislative Councillors.

Travancore, a very progressive Indian State was the first to grant the Legislative vote to women at the close of 1920 and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewas Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the Madras Legislative Council to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion, in which it was evident that opposition came only from the Mohammedan members, the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future. When the division was taken, it resulted in the resolution being carried by a majority of 84. Madras has thus the honour of being the first Province in British India to enfranchise its women and it has done this ungrudgingly and unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men. Dr. (Mrs.) Muthukrishni Reddi, the first woman member of the British Indian Legislature has been able to introduce legislation to do away with the Devadasi service in the Hindu temples and the immoral traffic in women and children. She has also devoted her attention to the development of the education of girls and to the promotion of the health of mothers and children.

Mr. Trivedi brought forward a Woman Suffrage Resolution in the Bombay Legislative Council during the same session but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Sahib Harilal Desai, Harilal Desai of Ahmedabad, Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujarati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The Bombay Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Provinces gave the lead to the other Provinces. In September 1922 Mr. S. M. Bose, in the Bengal Council, moved a Woman Suffrage Resolution, which was debated for three days but finally defeated by 53 to 37 votes, a bloc of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38.

Mr. Devaki Prasad Sinha's similar Resolution in the Behar and Orissa Legislative Council was defeated by only a 10 votes' majority.

These Debates proved so educational to their respective Provinces that the Bengal and Behar Provinces have since granted qualified women the Municipal Vote.

In February, 1923, a world suffrage record was made by the unanimous vote of the United Provinces Legislative Council in favour of Woman Suffrage.

In 1926 the Punjab granted woman suffrage without a division, and in 1928 the Central Provinces.

The new Reform Bill for Burma has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1923, the Mysore Legislative Council unanimously passed the Woman Suffrage Resolution. The vote for the Representative Assembly of Mysore was granted to women in October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. H. The Maharaja and His Privy Council in June 1923. In October, 1924, Assam Provincial Council granted Woman Suffrage for its Province by 26 to 8. It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members.

In 1929 soon after the All India Women's Educational Reform was held in Patna, the Legislative Council of Behar and Orissa gave women the right of voting, election and nomination to the Council on the same terms as men. Thus the whole of British India has now

given to women equal political rights with men. The result has already demonstrated itself in the remarkable advancement of all the interests of women along the lines of education, health, housing, morality and social customs.

The Indian Native States of Travancore, Cochin and Rajkot are the only places in India where the sex disqualification has been completely removed from the statute book. These have allowed women the right to stand for election to the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonam Lukhose became a member of the Travancore Legislative Council on taking the position of State Darbar Physician. She acted as Minister for Health to the State for three years. Cochin State nominated Mrs. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the disqualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament and the gaining of this right remained as a further objective of the women suffragists. Many large, influential meetings were held claiming the right of women to entry of the Legislatures. A deputa- tion of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has passed by a large majority a Resolution granting the Assembly franchise to the women of such Provinces. Accordingly on November 1923, women in India voted for the first time for the elections of both Provincial Legislative Councils and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and comprised women of all castes and communities.

In April, 1926 as a result of a favourable recommendation of the Muddiman Committee on Franchise Reforms, the Rule was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Again Madras Council on the 17th July, was the first to pass a Resolution admitting women to its membership. Bombay and the Punjab followed its lead in August and October respectively. This enabled women to become members of the Councils which have been functioning since then. But the permission

came too late for women to stand for election with any great chance of success, so the Women's Indian Association asked that women be nominated by Government for the new Councils in those Provinces which had voted to admit them and that women also be nominated to the Assembly and the Council of State. Thus the year 1926 marked another milestone passed on the road to the complete political emancipation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal all granted the Franchise to women. The year 1927 was notable for the nomination of the first woman member to a Legislative Council in British India, the recipient of the honour being Dr. MUTHULAKSHMI AMMAL and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the Office of DEPUTY PRESIDENT OF THE COUNCIL. Since then Mrs. Kale has been nominated to the Legislative Council of the Central Provinces, and Mrs. Ahmed Shaw to that of the United Provinces. A Deputation from the All India Women's Conference in Delhi in 1928 waited on the Viceroy requesting him to nominate two women to the Legislative Assembly. That has still remained ungranted.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibilities will be those who rightly will be the legislative influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and has been adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects, almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladies have identified themselves specially with the movement. Lady D. Tata, Lady A. Bose, Lady T. Sadasaivair, the Begum of Camber, Mrs. Banabai Banad, Mrs. Sarojini Naidu, Mrs. Jajji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jivrajdas, Dr. A. Besant, Mrs. M. K. Cousins, Mrs. Srirangamma, Mrs. Chandrasekhara Iyer, Miss S. Sorabji, Mrs. Khedkar, Dr. Mistry, Dr. Muthulakshmi Ammal, Mrs. Palmer, Mrs. Saraladevi Choudhury, Mrs. Kamaladevi Basu, Mrs. K. N. Rao, Lady Shah, Mrs. Hassan, Miss S. B. Das, Mrs. P. Sen, Mrs. Rustomji Faridkot, Mrs. B. Rama Rao, Mrs. Deep Narain Singh, Mrs. Basu, Mrs. van Guldenester etc.

Warrant of Precedence.

The following new Warrant of Precedence for India was approved by His Majesty the King Emperor of India, and received His Royal Sign Manual on 9th April 1930—

- 1 Governor General and Viceroy of India
- 2 Governors of Presidencies and Provinces within their respective charges
- 3 Governors of Madras, Bombay and Bengal
- 4 Commander-in-Chief in India
- 5 Governors of the United Provinces, Punjab, Bihar and Orissa and Burma
- 6 Governors of the Central Provinces and Assam
- 7 Chief Justice of Bengal
- 8 Members of the Governor General's Executive Council
- 9 Commander in Chief of His Majesty's Naval Forces in the East Indies
- 10 President of the Council of State
- 11 President of the Legislative Assembly
- 12 Chief Justice of a High Court other than that of Bengal
- 13 Agents to the Governor General, Rajputana, Central India, Baluchistan, Punjab States and States of Western India, Chief Commissioner of the North West Frontier Province, Commissioner in Sind, Members of Executive Councils and Ministers of Governors and Lieutenant-Governors* Political Resident in the Persian Gulf Resident and Commander in Chief at Aden, and Residents at Hyderabad and in Mysore within their respective charges
- 14 Chief Commissioner of Railways General Officers Commanding Northern, Southern Eastern and Western Commands and Officers of the rank of General
- 15 Members of the Executive Councils and Ministers in Madras, Bombay and Bengal*
- 16 Members of the Executive Councils and Ministers, United Provinces, Punjab Burma and Bihar and Orissa*
- 17 Agents to the Governor General, Rajputana, Central India, Baluchistan, Punjab States and States of Western India, Chief Commissioner of the North West Frontier Province, Political Resident in the Persian Gulf and Residents at Hyderabad and in Mysore
- 18 Members of the Executive Councils and Ministers, Central Provinces and Assam*
- 19 Presidents of Legislative Councils, within their respective Provinces
- 20 Chief Judges of Chief Courts, and Puisne Judges of High Courts
- 21 Lieutenant-Generals
- 22 Auditor General Chairman of the Public Service Commission and Chief Commissioner of Delhi, when within his charge.
- 23 Air Officer Commanding, Royal Air Force in India Flag Officer Commanding and

Director, Royal Indian Marine Members of the Railway Board Railway Financial Commissioner Secretaries to the Government of India and Vice Chairman, Imperial Council of Agricultural Research

24 Additional Secretaries and Joint Secretaries to the Government of India Commissioner in Sind, Controller of Civil Accounts Financial Adviser, Military Finance, Judges of Chief Courts, Members of the Central Board of Revenue, and Resident and Commander-in-Chief at Aden

1 The entries in the above table apply exclusively to the persons entered therein, and while regulating their relative precedence with each other, do not give them any precedence over members of the non official community resident in India, who shall take their place according to usage

2 Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se*, according to the date of entry into that number

3 When an officer holds more than one position in the table he will be entitled to the highest position accorded to him.

4 Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents

5 All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades

6 All other persons who may not be mentioned in this table to take rank according to general usage which is to be explained and determined by the Governor General in Council in case any question shall arise. When the position of any such person is so determined and notified, it shall be entered in the table in italics, provided he holds an appointment in India.

7 Nothing in the foregoing rules to disturb the existing practice relating to precedence at the Courts of Indian States or on occasions of intercourse with Indians, and the Governor General in Council to be empowered to make rules for such occasions in case any dispute shall arise

* In virtue of the provisions of section 9 (4) of the Indian Church Act, 1857, a Bishop or Archdeacon who held a bishopric or archdeaconry on the 1st March 1930 takes rank as follows —

Bishop of Calcutta Metropolitan of India, immediately after Chief Justice of Bengal, article 7

Bishops of Madras and Bombay, immediately after Chief Justice of a High Court other than that of Bengal, Article 12

Bishops of Lahore, Rangoon, Lucknow and Nagpur, immediately after Chief Commissioner of Delhi, when within his charge, article 23

Bishops (not territorial) under license from the Crown, immediately after Chief Secretaries to Governments, other than those of Madras, Bombay, Bengal and Assam, article 32

Archdeacons of Calcutta, Madras and Bombay, in Article 33

Archdeacons of Lahore, Lucknow, Rangoon and Nagpur, in article 39.

8. The following will take courtesy rank as shown.—

Consuls-General,—Immediately after Article 38 which includes Brigadiers Consuls—Immediately after Article 38 which includes Colonels, Vice-Consuls—Immediately after Article 38, which includes Majors

Consular officers *de carriere* will in their respective grades take precedence of consular officers who are not *de carriere*

9 The following may be given by courtesy precedence as shown below, provided that they do not hold appointments in India —

Peers according to their precedence in England Knights of the Garter the Thistle, and St Patrick, Privy Counsellors Members of the Council of the Secretary of State for India—Immediately after Members of the Governor General's Executive Council, Article 8

Baronets of England, Scotland Ireland, and the United Kingdom according to date of Patents Knight Grand Cross of the Bath Knights Grand Commander of the Star of India Knights Grand Cross of St Michael and St George Knights Grand Commander of the Indian Empire, Knights Grand Cross of the

Royal Victoria Order Knights Grand Cross of the Order of the British Empire—Immediately after Puisne Judges of High Courts Article 20

Knight Commander of the Bath Knights Commander of the Star of India Knights Commander of St Michael and St George, Knights Commander of the Indian Empire, Knight Commander of the Royal Victorian Order Knight Commander of the Order of the British Empire Knights Bachelor—Immediately after the Residents of the 2nd Class Article 28

10 All ladies, unless by virtue of holding an appointment themselves they are entitled to a higher position in the table, to take place according to the rank herein assigned to their respective husbands, with the exception of wives of Peers and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons such ladies to take place according to their several ranks, with reference to such precedence in England immediately after the wives of Members of the Governor General's Executive Council

Indian Orders.

The Star of India

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1875, 1876, 1897, 1902, 1911, 1915 and 1920 and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire. The second and third classes for services in the Indian Empire thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India), the first class of forty four Knights Grand Commanders (22 British and 22 Indian), the second class of one hundred Knights Commanders, and the third class of two hundred and twenty five Companions, exclusive of Extra and Honorary Members as well as certain additional Knights and Companions.

The insignia are (i) The Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular ribbon, tied at the ends and inscribed with the motto of the Order, *Queen's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width of the same colour and pattern as a Knight Grand Commander, and pendant therefrom a badge of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears around his neck a badge of the same form as appointed for a Knight Commander, but of a smaller size pendant to a like ribbon of the breadth of one and a half inches. All insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order — His Most Gracious Majesty The King Emperor of India.

Grand Master of the Order — His Excellency the Viceroy and Governor-General of India, the Right Honourable Viscount Willingdon, P.C., G.M.S.I., G.M.I.B., G.D.L.

Officers of the Order — *Registrar* Col the Hon. Sir George Arthur Charles Crichton, K.C.V.O., Secretary of the Central Chancery of the Orders of Knighthood, St. James Palace London, W. 1

The Most Eminent Order of the Indian Empire

This Order instituted by H. M. Queen Victoria, Empress of India, December 1877, and extended and enlarged in 1886, 1887, 1892, 1897, 1902, 1911, 1915 and 1920 is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, forty Knights Grand Commanders (of whom the Grand Master is first and principal), one hundred and forty Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 20 nominations in any one year), also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan 1st, 1909, commemorative of the 60th Anniversary of the assumption of Crown Govt in India.

The Insignia are (1) The COLLAR of gold framed of elephant, with flowers, peacocks in their pride, and Indian rose, in the centre the Imperial Crown, the whole linked together with chains, (2) The STAR of the Knight Grand Commander, comprised of five rays of silver,

having a small ray of gold between each of them the whole alternately plain and scaled, issuing from a gold centre having thereon Her Majesty Queen Victoria's Royal Emby within a purple circle, edged and lettered gold inscribed *Imperatrix Auspicio*, and surmounted by an Imperial Crown gold (3) The BADGE consisting of a rose, enamelled gules barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Emby, within a purple circle, edged and lettered gold inscribed *Imperatrix Auspicio*, surmounted by an Imperial Crown, also gold (4) The MANTLE is of Imperial purple satin, lined with and fastened by a cord of white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order

A Knight Commander wears (a) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander pendant therefrom a badge of smaller size (b) on his left breast a star, similar to that of the first class, but the rays of which are all of silver

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order

A Companion wears around his neck a badge (not returnable at death) of the same form as appointed for a Knight Commander, but of smaller size, pendant to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order—His Most Gracious Majesty The King-Emperor of India

Grand Master of the Order—H. E. the Viceroy (Viscount Willingdon)

Officers of the Order—The same as for the Order of the Star of India.

The Imperial Order of the Crown of India.

This Order was instituted Jan 1, 1878, and for a like purpose with the simultaneously created Order of the Indian Empire. It consists of the Queen and Queen Mother with some Royal Princesses, and the female relatives of Indian Princes or of persons who have held conspicuous offices in connection with India.

Badge, the Royal Cypher in jewels within an oval surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. Designation, the letters C. I.

Sovereign of the Order

THE KING EMPEROR OF INDIA

Ladies of the Order (C. I.)

Her Majesty The Queen

Lady Ali Shah

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', 'Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

on

A Press Note issued in November, 1914, states:—The Government of India have recently had under consideration the question of the position of Indian titles should be worn, and have decided that they should be worn on the left breast fastened by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the badge itself. When the miniatures are worn in conjunction with other decorations they should be placed immediately after the Kaiser-i Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 26th, 1907 by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII. and on the reverse a laurel wreath encircling the words 'For Distinguished Service'. The medal, $1\frac{1}{2}$ inches in diameter is ordered to be worn immediately to the right of all war medals suspended by a red ribbon $1\frac{1}{2}$ in wide, with blue edges $\frac{1}{2}$ in wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co. in 1887, to reward personal bravery without any reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted but in the event of the death of the recipient his relatives retain the decoration. The order carries with it an increase of one third in the pay of the recipient and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points $1\frac{1}{2}$ in diameter having in the centre a ground of dark blue enamel bearing crossed swords in gold within a gold circle, and the inscription 'Reward of Valour the whole being surrounded by two wreaths of laurel in gold. The Second Class star is of silver with the wreaths of laurel in gold and the Third Class entirely of silver. The decoration is suspended from a simple loop and bar from a dark blue ribbon $1\frac{1}{2}$ in wide with red edges bearing a gold or silver buckle according to class.

Order of British India.—This order was instituted at the same time as the Order of Merit to reward native commissioned officers for long and faithful service in the Indian Army. Since 1878 however, any person European or native, holding a commission in a native regiment became eligible for admission to the Order without reference to creed or colour. The First Class consists of a gold eight-pointed radiated star $1\frac{1}{2}$ in diameter. The centre is occupied by a lion rampant guardant upon a ground of light-blue enamel, within a dark-blue band inscribed 'Order of British India' and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band $\frac{7}{8}$ in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is $1\frac{1}{4}$ in in

diameter with dark blue enamelled centre there is no crown on this class, and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title Sirdar Bahadur, and an additional allowance of two rupees a day and the Second the title of Bahadur, and an extra allowance of one rupee per day.

Indian Meritorious Service Medal.—This was instituted on July 27th, 1888, and on receipt of the medal the order states "a non-commissioned officer must surrender his Long Service and Good Conduct medal" but on being promoted to a commission he may retain

the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the legend Victoria Kaisar-i-Hind. On the reverse is a wreath of lotus leaves enclosing a wreath of palm tied at the base, having a star beneath, between the two wreaths is the inscription for meritorious service. Within the palm wreath is the word India. The medal, 1½ in in diameter, is suspended from a scroll by means of a red ribbon 1½ in wide. The medals issued during the reigns of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to EDWARDVS or GEORGIVS

THE KAISAR-I-HIND MEDAL.

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows:—"Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour. Now for the purpose of attaining an end so desirable as that of thus distinguishing such services aforesaid, We have instituted and created, and by these presents for Us Our Heirs and Successors, do institute and create a new Decoration." The decoration is styled 'The Kaisar-i-Hind Medal for Public Service in India' and consists of two classes. The Medal is an oval-shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words 'Kaisar-i-Hind for Public Service in India'. It is suspended on the left breast

THE VICTORIA CROSS

The announcement made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross, gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following —

Subadar (then Sepoy) Khudadad Khan 139th Baluchis—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed.

Naik Darwan Sing Negi, 1-39th Gurkha Rifles,—For great gallantry on the night of the 23rd/24th November 1914 near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches, and although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jamadar) Mir Dast 56th Coke's Rifles.—For most conspicuous bravery and great ability at Ypres on 28th April 1915 when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa 23rd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Mauculsaart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety, returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Harildar (then Lance Naik) Lal, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but *Lance Naik Lal* insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When

this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh 9th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until midnight he remained beside the wounded officer shielding him with his own body on the exposed side. He then under cover of darkness went back for assistance and brought the officer into safety.

Naik Shahamad Khan 80th Punjabis.—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line with its 150 yards of the enemy's untraversed position. He beat off three counter attacks, and worked his gun single-handed after all his men except two belt-fillers, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all the mauling arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance Dafedar Goward Singh 28th Cavalry.—For most conspicuous bravery and devotion to duty, in thrice volunteering to carry messages between the regiment and brigade headquarters, a distance of 1½ miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

Rifleman Karan Bahadur Bana 23rd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur posted the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew. Then switching his fire on the enemy bomber

and riflemen in front of him, he silenced them. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day and when a withdrawal was ordered assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Rasaldar Badin Singh, 14th Lancers attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron charged a strong enemy position on the west bank of the River Jordan, between the river and Kh. es Samatirah Village. On nearing the position Rasaldar Badin Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when capturing one of the machine guns single-handed, but all the machine guns and infantry had surrendered

to him before he died. His valour and initiative were of the highest order.

Riftman Gobar Sing Negi, 2nd Battalion 59th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy Ishaw Singh, 28th Punjab.—For devotion and bravery "quite beyond all praise" in Waziristan on 10th April, 1921. He received a severe gunshot wound in the chest while serving a Lewis gun, and when all the handholders had been killed or disabled he struggled to his feet, called to his assistance two men, and charged and recovered the gun, restoring it to action. He refused medical attention, insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded him with his body and he submitted to medical attention himself only after he was exhausted through three hours continual effort and by loss of blood.

PASSPORT REGULATIONS

A.—British Subjects.

1 British Indian passports are issued only to—(1) British subjects by birth, (2) wives and widows of such persons, (3) British subjects by naturalisation and (4) British protected persons.

2 The Indian Passport Regulations do not require persons to be in possession of passports for leaving India but as practically every other country requires travellers to be in possession of passports before they are allowed to land at the port of such country travellers are advised to obtain passports before embarkation. Members of His Majesty's Naval, Military or Air Forces or of the Indian Marine Service travelling on duty and members of the families of such persons when travelling to the United Kingdom on military entitled passages need not have passports.

3 Passports are not required for journeys by sea from Bombay to ports in India or to Burma, nor are passports required for permanent residents of Ceylon or India being British subjects to travel between India and Ceylon. Natives of India travelling to the Federated Malay States or the Straits Settlements do not require passports unless they propose to continue their journey onward. (The term 'permanent resident' actually means persons born and domiciled in India.)

4 In order to obtain a passport, an application form (showing among other things, the reasons for the proposed journey) should be filled in by the applicant and the applicant's declaration certified by a Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent, or Notary Public resident in India. Copies of the form can be obtained from any District Magistrate from the Commissioner of Police, Bombay, by

post from the Passport Officer to the Government of Bombay by personal application at the Passport Office or from any of the leading Banking and Shipping Agents in Bombay. Small duplicate unmounted copies of the photograph of the applicant and a fee of Rs. 5 in cash should be forwarded with the application form. Fees are not accepted in stamps or by cheque.

5 The application form when filled in should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay, or should be presented at the Passport Office, Bombay, an applicant who forwards his application for a passport through the post may call at the Passport Office at Bombay to take personal delivery of it but if it is desired that the passport should be sent to him through the post it will be sent to the local officer of the town in which the applicant resides who will hand over the passport to the applicant personally and take a receipt for it.

6 The Passport Office in Bombay is situated in the Civil Secretariat. The office is open from 11 a.m. to 4 p.m. daily, except on Saturdays when it closes at 1 p.m. and on Sundays and public holidays.

7 As a passport is valid for five years, there is no objection to anyone applying for a passport weeks or even months in advance of the date of sailing and much inconvenience will be avoided by early application. A notice of at least four days should be given for the preparation of a new passport and at least two days for an endorsement, renewal or visa. The Passport Officer cannot issue passports outside office hours and as the preparation of a passport takes time, applicants who postpone application to the last moment do so at their risk.

Iraq

8 Members of His Majesty's Naval, Military or Air Forces or of the Indian Marine Service in uniform and *bona fide* Muhammadan pilgrims (Haj or Zair) holding individual pilgrim passes do not require passports for their journey to Iraq. If such pilgrims desire to continue their journey to Persia for the purpose of pilgrimage they must obtain a Persian Consular visa in India. All other travellers must be in possession of national passports and visas for Iraq. In the absence of Iraqi Consular Officers in India, visas for Iraq are granted by Passport Issuing Authorities in India on behalf of the Iraq Government subject to the conditions stated below. The Iraq visas are of two kinds—Ordinary valid for all entries into Iraq during a period of twelve months, and Transit valid for a single journey only allowing for stay of not more than fifteen days in Iraq. The fee for these visas is the same as for British visas—*vide* paragraph 17 below. Iraqi national passports are valid for return to that country without any further visa or endorsement.

Except in the case of *bona fide* tourists, business representatives and employees of well established firms and persons with definite guarantee of employment in Iraq, visas for Iraq will not be granted without the previous permission of the Iraq Government. The Passport Offices will on request, ask for this permission by post or if the applicant is prepared to defray the cost by cable. Applicants must state clearly the nature of their business and give one or more references in Iraq to enable the local authorities to make inquiries regarding the purpose of their journey.

With the exception of tourists who may remain for three months in Iraq without registration all persons are required to obtain a 'permis de sejour' from the police within fifteen days of their arrival in Iraq. Travellers are also warned that before departure from Iraq even on a transit visa they must obtain a passport endorsement of departure.

Egypt

9 In the absence of Egyptian Consular Officers in India visas for Egypt are granted by Passport Issuing Authorities in India on behalf of the Egyptian Government. The fee for these visas is the same as for British visas—*vide* paragraph 17 below.

The Egyptian Government have prescribed rules which regulate the admission of foreigners into Egypt. Generally except in the case of British Government officials, *bona fide* tourists of simple and independent means and representatives of commercial houses of good standing, visas for Egypt cannot be granted whether for permanent residence or for a limited period without a reference to the Egyptian Government. In applying for visas for Egypt a form of questionnaire laid down by the Egyptian Government which can be obtained from the Passport Office at Bombay, should be filled in. In addition an applicant, for a visa should supply in writing full particulars as regard the nature of his business in Egypt, the reasons for the journey, the proposed duration of stay in Egypt and what means he possesses.

No transit visa for Egypt can be given unless Egypt is necessarily on the route which

the traveller must follow to reach his country of destination and provided there exists no direct route by which he can reach that country without the necessity of passing through Egyptian territory.

Holders of the new form Egyptian passport do not require visas to return to Egypt.

10 Restrictions also exist on travel to various parts of the British Empire, and to certain foreign countries. Among these may be mentioned Australia, Canada, Mexico, Mahommurah and Abadan, New Zealand, Palestine, Southern Rhodesia, Union of South Africa, South West Africa and the United States of America. The restrictions apply particularly to Indians. Detailed particulars with respect to each country will be supplied on application.

Foreign Countries

11 Passports for journeys to or through foreign countries require, after issue the visa of the Consul concerned. The addresses of the foreign consulates in Bombay will be found in the appendix below. Visas are, however, not necessary for Austria, Belgium, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxembourg, Norway, Portugal, Sarro, Spain, Sweden, Switzerland and Czechoslovakia provided the names of these countries are entered on the passport by a British Passport Issuing authority.

Renewal

12 A passport is valid for five years from the date of issue and is renewable for a further period of from one to five years from the date of expiry of its validity, at the option of the holder, but in no case can a passport be extended beyond ten years from the original date of issue. On expiration of this period or, if at any time the space provided for visas is covered and the holder wishes to travel to countries for which fresh visas are required, a new passport must be obtained. Application for renewal must be made in the prescribed form, copies of which may be had from any of the officers mentioned in paragraph 4 above. The fee for renewal is Rs 2 for each year or portion of a year for which the passport is renewed.

Endorsements

13 A passport is valid only for the country or countries endorsed on it and fresh endorsements from a British Passport authority are not needed during the validity of the passport for subsequent journeys to these countries. Fresh endorsements may, however, be obtained on the passport for additional countries. Passports endorsed as valid for the British Empire are also available for travelling to territories under British protection or mandate not however including Palestine and Iraq for which countries the passport must be specifically endorsed. A fee of Re 1 is payable for an endorsement for a foreign country made on a British passport issued by a British authority outside India, but no fee is payable for any endorsement on a passport issued in India, and a fee of Re 1 8-0 is payable for an additional endorsement for Palestine on all British passports.

Marriage

14 A lady on marriage or re-marriage requires a fresh passport.

15 In the case of a joint passport issued in favour of a husband and wife the latter cannot travel alone on it but should take out a fresh passport surrendering the joint passport for cancellation of her name from it

B—Foreigners

16 Foreigners proceeding direct to their own country or to or through any other foreign country or countries do not require a British visa on their passports. The nationals of the following countries do not require a British visa for travelling to the United Kingdom. The concession also applies to certain nationals proceeding to certain British Dominions and Colonies and information on this point can be obtained from the Passport Officer. The concession does not apply to India.

Austria Belgium Denmark France, Germany Holland Ireland Italy Liechtenstein Luxembourg Norway Portugal Siam Spain Sweden Switzerland and Czechoslovakia.

17 Foreigners who are subjects of the countries shown in the appendix below and who are travelling to British territories for

which a British visa is necessary should first obtain passports from their consular representatives and should then present them to the Passport Officer for visa together with a written statement of the reasons for the journey. British visas are of two kinds, viz. the Non-transit and Transit. The fees for these are Rs 7-0-0 and Rs 1-0-0 respectively except in the case of nationals of States which levy higher fees, when the retaliatory scale of fees will be applied.

18 Other foreigners should apply for Identity certificates through the Commissioner of Police, Bombay or where such foreigners reside in the mofussil, through the District Magistrate of the district in which they are residing. Small duplicate copies of the applicant's photograph should accompany the application. The fee for an Identity Certificate is Rs 1-8-0.

19 The holder of a foreign passport who has obtained a visa granted by a British Passport Authority outside India for a destination which involves landing in, or passing through, India does not need a further visa from the authorities in India.

20 Copies of this notice can be had free of charge on application.

The School of Oriental Studies

This School was established by Royal Charter in June 1910. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, and Customs of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and interesting buildings, in Minebury Circus, provided by the British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. The School

provides teaching in more than seventy subjects. In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions and Customs of Oriental and African countries form a special feature in the teaching of the School. There is a whole time Reader in Phonetics the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School.

Owing to the generosity of the Rockefeller Foundation a new sub-department under Mr. Lloyd Jones has been opened for the teaching of and research into African Linguistics.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff. Various Scholarships are given.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism are among the most ignorant, suspicious and prejudiced of the population, extremely averse to attending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it

appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras which in 1905 initiated an investigation of the industry both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906, and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal and Bihar and Orissa. Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of fishermen in India, there was less urgent need for State help in the industry. Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the abolition in 1924 of the short lived Department of Industries to which this subject was allotted.

Madras

The Madras coast line of 1750 miles is margined by a shallow water area within the 100 fathom line of 40 000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatnam, the unshrinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured from September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1927-28, the fisher-population on the West coast totalled 114,502. The esteemed table fish of the coast consist of the Seer (*Ophius* or *Scomberomorus*), Pomfret (*Aplous* and *Syngnatus*) several large species of Horse Mackerel (*Caranx*), Jew Fish (*Scorpaenidae*) Whiting (*Sillago*) Thread-fins (*Polygona*) Sardines (*Clupea*) and Mackerel (*Scomber*). In economic importance, however, shoaling fish and fish of

inferior quality such as Sardine (*Clupea*) Mackerel (*Scomber*) Cat fish (*Arius*), Ribbon fish (*Trichiurus*), Goggles (*Caranx crumenophthalmus*) and Silver bellies (*Egusa* and *Caza*) take precedence of the former. Sardine and Mackerel over-shadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (*Ratnagiri*) which are engaged in drift netting for bonito, seer and other medium sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres the material is largely cured for export.

The Madras Department of Fisheries.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organized and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and untiring plans of Sir F. A. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to

him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities. In 1907 a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr James Horsell, F.L.S. as Director and is now controlled by his successor Dr. B. Sundara Raju, M.A., Ph.D. The activities of the Department have greatly expanded since its inception. A Committee constituted by Government to enquire into the working of the Department and make recommendations for its future development have just published their report in two volumes. The Evidence collected by the Committee is an octavo volume of 431 pages and the Report of the Committee is another similar volume of 264 pages. The Report is a remarkable production which summarises the aims and achievements of the Department during the last quarter of a century and contains detailed proposals for the expansion of the Department activities in different directions. The whole work of the Department has received a great impetus as a result of the report of this Committee. The Committee have emphasised the true purpose and aim of a technical Department of Fisheries to be essentially the material amelioration of the lot of the sea-going fishermen. The activities of the past 25 years were largely concerned with curing and canning manufacture of oil and guano and safe guarding of Government revenues. Remarkably successful as they were under the able guidance of Sir Frederick Nicholson, they seemed somewhat to obscure what should be the primary object and policy of the Department. Technological improvements in curing and canning and allied industries should follow ultimately in the wake of improved catches. Socio-economic and humanitarian endeavours however necessary and important in view of the caste system of India could not directly add one fish to the actual catch of the fisherman. The Committee have therefore urged that efforts to improve the professional knowledge of the sea-going fishermen and the catching powers of his craft and tackle which were inaugurated with the Inquisition of the trawler in 1926 must necessarily occupy the first place of the departmental programme. The higher staff now consists of five Assistant Directors and an Assistant Biologist. These are respectively in charge of (1) the shark and beche-de-mer fisheries, (2) the Co-operative and educational work and the West coast fish curing yards, (3) inland pisciculture, (4) deep sea fishing, (5) propaganda for rural pisciculture and (6) financial investigations and fishery research. Certain other officers have charge respectively of sections dealing with technological research, trout fisheries and the fisheries of the Northern Circars. A special staff of officers trained in co-operation have been appointed for intensive work among fishermen. The miscellaneous institutions controlled by the Department consist of a small demonstration cannery, a research station for curing, canning and allied industries, a Fisheries Training Institute at Calicut for imparting special training to teachers selected to teach in schools for fish-children of which there were 43 with a total of

3,637 pupils in 1930. All the public fish curing yards which were under the control of the Salt and Abkari Department till 1924 have passed into the charge of the Fisheries Department. It is now possible to introduce the better methods of cure and improved hygiene which the Department has been straining to popularise in all the yards. Due to the transfer of the yards, the Fisheries Department has a large ramified staff of yard officers (Salt Sub Inspectors, Petty Yard Officers and Peons) in almost every large fishing village on the coast. Besides the direct work of issuing salt for curing the Department sets itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift, co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and quantity of sea fish caught and landed. Statistics have been published since 1925-26 regularly every year in the bulletins.

The activities of the Department are so varied and far reaching that it is difficult even to enumerate them in the space available much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. Twenty four volumes have been issued to date and the twenty fifth volume in Press. All this work has been carried on under serious handicap for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing, canning and oil manufacture. In co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Research Assistant, Fisheries Station, Banur, Madras at moderate prices.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coast. Its present success is due primarily to Dr. Francis Day who after an investigation during 1890-71 of the fisheries of the whole of India, pressed for the grant to fishermen a duty free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government and from 1892 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the

salt to Government. At present about 115 of such yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1930-31 was Rs. 1,97,777-0-4 and expenditure Rs. 2,85,913-12-4.

Pearl and Shank Fisheries—In the absence of the pearl fishery during the year the shank fisheries prospered. An unprecedented number of 467,628 shanks were fished yielding a gross revenue of Rs. 17,880-8-8.

The Inland Fisheries—The inland fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 8 months. As a consequence inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water, only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel notable for its virtue of living for a considerable period out of water and various carps including Labo, Catla and the well known favourite of sports men in India, the Mahaseer. Cat fish, Hilsa and the Nilgiris and Rainbow Trout have been acclimatised and thrive well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department. The results so far have shown a profit on the operations. To breed the necessary fry 7 fish farms are in operation. In these the chief fish bred are the Gourami obtained from Java, and Etroplus suratensis which has the excellent attribute of thriving and breeding as well in brackish as in fresh water, both protect their eggs while developing a useful habit. Both the Gourami and Etroplus are largely vegetarian in diet. A further activity is represented by the breeding of small fishes especially addicted to food upon the aquatic larvae of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito-haunted sheets of water. These antimalarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on

21st October 1930. The Superintendent Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening being the first institution of its kind in Asia, it has been immensely popular with the Public.

A turtle tank of rough semi circular shape with 21 feet as diameter was added during the course of the year.

Deep Sea Fishing and Research—The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

- (1) what kinds and quantities of fish are available beyond 7 fathoms, and
- (2) how to exploit these deep sea fisheries economically.

The department's trawler *Lady Goshen* has been exploring the off shore belt of the sea up to 100 fathoms from Point Calimere to Madras on the East Coast and Calicut to Pigeon Islands on the West Coast with a view to ascertain the kinds and quantities of fish available there. The Assistant Biologist and staff worked on board the trawler. One remarkable discovery made by this systematic survey is that fish of better quality and in larger quantities are available in deeper waters on the East coast from Point Calimere to Madras than on the West coast from Calicut to Pigeon Islands during the months of the survey. Whether it is the case throughout the year is yet to be ascertained. However, it has helped to revise the general belief that fish are much more abundant on the West coast than on the East coast and opens up possibilities for large fishery developments on the East Coast which will ultimately increase the supply of fish food and fish manure.

Rural Pisciculture—As a result of the recommendation of the Royal Commission on Agriculture that all practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary staff was appointed to advise ryots in the stocking of village ponds which number over 106,050 in the Presidency. The work though begun in July 1930 has already completed a survey of ponds in 98 villages, 2,172 wells and 264 ponds in these villages were examined and out of this number 175 wells and 80 ponds were selected as suitable for piscicultural operations and 45 wells and 1 pond were stocked.

Welfare Work—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of appearing among them education and the habits of thrift, temperance and co-operation. The work has been especially successful on the West Coast. The number of fishermen's co-operative societies in 1930-31 was 73.

The need for special efforts to promote co-operation among fishermen and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative societies should work under the Fisheries Department the Co-operative supplying trained inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 3 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

Two industrial societies were started, one at Bhangad and the other at Palapatty on the West Coast in 1927 with the object of weaning

the fishermen gradually from the influence of middlemen capitalists. The Government sanctioned a loan of Rs. 1,500 each to the two societies for purchasing boats, nets and other accessories for fishing purposes. They are working since 1927 with varying degrees of success.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery stations at Tanur and Chaliyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. In some places the villagers themselves started the schools and then handed over to the Department. In other places schools were opened by the Department at the request of the fishermen. Local men are appointed as honorary managers of schools.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, shoals, and swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 50 per cent. of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency of Rajshahi, and Decra Divisions 444,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh water fisherman the Bengali is most ingenious his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea tilapia*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the mola (*Catla catla*), mrigala (*Channa mrigala*), prawn and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti (*Lateolabrax*) and the mullets are the most esteemed, apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polydora*), pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save outriggers of inferior design and construction.

Following the inquiry begun in 1908 by Sir K. D. Gupta, an investigation of the ocean resources of the head of the Bay of Bengal was undertaken, the trawler *Golden Ocean* being employed for the purpose. The results showed that there are extensive areas

suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam trawling are now much more, steam trawling companies being floated in the immediate future. The trade is a difficult one to organise and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organisation the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in 1912 after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. There is no immediate prospect of reconstitution of the Department. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish by-products. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middlemen) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow

work, but a beginning has been made and a number of fishermen's co-operative Societies have been formed. Their example is calculated to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

Fresh water mussels are used extensively at Dacca in the manufacture of cheap pearl

buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing, their material is almost entirely obtained from the North Indian and Ceylon oyster fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea fisheries are of very great importance financially as well as economically and, though there is less necessity for a special department to develop marine industries, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries particularly those connected with the utilization of by-products. With this end in view the Director of Industries administered the subject of "Fisheries from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for repacking, supplying ice and stores and for unloading catches. More than this a change is needed in the medieval conditions under which the local fish market is conducted and there is much to be done in popularizing little known species of edible fish such as kareel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it is sold on the average at the rate of 100 lbs. for a rupee.

Owing to retrenchment the appointments of Fisheries officers have been abolished.

The more important sea-fishes are pomfrets, sole and sea-puffers among which are included the valuable Jew-fishes (*Siganus* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounders" largely exported from Bombay for eventual manufacture into kinkadins. The finest of Bombay fishing boats hail from the coast between Bassein and Surat. These dhows are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together in the season they fish principally

off the Kutch and Kathiawar coasts and in the month of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and Jew fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bombil steer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter especially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters a fact which shows how large they run in size.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, such as soorral shark, rays and Jew-fishes. In order to prevent destructive exploitation of oyster beds the plucking of oyster is confined to licensed fishermen and is limited to a few months of the cold weather. The demand for oysters for edible purposes is considerable but although many oyster pearls are procurable it does not pay to work the beds for these purposes and the export of such seed pearls to China for use in medicine ceased many years ago. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaskwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1915 obtained the services on deputation of Mr J. Hornell, formerly Director of Fisheries in Madras, for the purpose of examining the marine potentialities of the Baroda territory in Kathiawar. One of the consequences was the discovery of large deposits of pearl bearing window-pane oysters until then unknown, of late years these beds have produced annually from Rs. 15,000 to Rs. 25,000 in revenue perhaps the best example we have in India of the profitable nature of well-directed scientific enquiry into fishery problems. The Baroda Government, continuing their

enlightened interest in the fishery developments have had two officers trained in the Madras Fisheries Department and now employ them in development work on the Rasode coast.

Experiments in canning are now in progress at one of the chief fishing centres on the Southern Malabar coast and already promising results have been obtained.

In 1910 Mr W H Lucas, Collector of Salt Revenue drew up a report on the improvement of the sea fisheries in the Bombay Presidency. The main conclusions at which he arrived were that the Indian consumer is so co servative

that new methods of curing, canning, etc., have no chance of succeeding without the help of patient demonstration by Government as an initial step towards the investment of Indian capital in a new enterprise, and that therefore the establishment of a Government demonstration fishing station at some large fishing centre on the Kanara coast may be found advisable after the results of the Madras Government fishing station have been studied.

Recently Mr H T Sorley, I.C.S. carried out a fresh survey of the fishing industry and his report is under publication.

Burma

Fresh dried and salted fish and fish paste are consumed by Burmese people. The value of fish imported from foreign countries (chiefly from Strait Settlements) was 24.5 lakhs in 1890-91. The exclusive right of fishing throughout the province of Burma belongs to custom of the country to Government and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish.

Revenue.—The economic value of any industry or tract of country can, to some extent be gauged by the revenue it yields. The fisheries yielded a substantial revenue (about 43.85 lakhs per annum during the last decennium) and therefore they are one of the most important sources of national wealth. The receipts declined to 2/3rds of this amount in the year 1931-32 owing to trade and economic depression. Some open lakes, pools of water and small rivers are classed as leaseable fisheries and are leased by Government to the highest and best bidder at public auction for periods varying from one to five years. The total number of leaseable fisheries in the province is 3,679 of which 1,667 lie in the Irrawaddy Division, and 703 in Moulmein—one of the five districts in that division.

The Delta consists of a series of saucer-shaped islands many of which have embankments round the greater part of them along the north, east and west. In the hollows of these islands most of the fish come into season, and with the floods which overflow the embankment during October the young fry come down country from Upper Burma.

Licenses for fishing in all open fisheries are issued annually to persons who pay the prescribed fees for the specified classes of fishing implements. The greatest revenue from licenses comes from Mergui District where not only is the Pearl fishing industry carried on but leases for collecting green snails and sea slugs are issued.

The principal kinds of fish caught in nets on the sea coast are (1) *Bakkayan*, (2) *Katha*, (3) *Kathahmyin* and (4) *Kalmu*. These are generally made into salt fish which fetch Rs 2 to Rs 3 per *win*. The crock and fresh water fish from fisheries are generally *ngahin*, *ngayon* and *ngagyi*. Most of them are sold fresh but some are converted into salt fish. The fish caught in the rivers are generally *ngathalau*, *Ngayon* and *Nganyayin*. *Kathalung* and *Ngaponna* which are found in small quantities elsewhere in India are sold in abundance in the Rangoon market.

The Punjab.

During the year 1931-32 there was no marked change in the operations of the Fisheries Department. On account of financial stringency no important advance could be made either in conservation or in research. The number of fishing licenses fell from 7463 in the previous year to 6,392 during 1931-32. The principal reason for this appears to have been unfavourable weather conditions.

The catches of professional fishermen on the whole were satisfactory in the plains districts and below average in the hilly districts. The trout fishing on the Beas and its tributaries in Kata was much better than usual. The number of trout Angling licenses rose from 89 in the last year to 113. The anglers spoke highly of

the excellent fishing to be had and the wonderful condition of the fish. Reports from the two front streams in Kangra proper were not satisfactory. Mahasir fishing in the Beas River in the Kangra and Hamirpur Districts was good.

As in previous years the trout cultural experiments in the hills were successful but the culture of carp and other indigenous fish at Chhenawan and elsewhere in the plains did not yield any important results. The Madhopur Fish Farm remained closed owing to paucity of funds, and for similar reasons no experiments with the breeding of *Kudwa* (*Pseudotropheus garua*) and carp could be made at the new tanks at Gili in the Ferozepore District.

Travancore.

This State has affiliated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan, the Department has already accomplished a notable amount of development work. Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies

among the fishing community and to the introduction of improved methods of sardine oil and gause production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. Special Schools have been opened for the education of fishermen.

The Forests

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realised the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind—a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country has been pursued steadily from the commencement and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to overestimate.

Types of Forest.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated. In the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited and the boundaries are not always demarcated, while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March 1930 was 249,710 square miles or 22.6 of the

total area. This was classed as follows: Reserved 107,753 Protected 6,263 Unclassified State, 135,694.

Throughout this vast forest area scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid Juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking the following main types of forest may be distinguished—

(1) **Arid country forests.**—Extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or *Kikar* (*Acacia arabica*) which however in the driest regions exists only by the aid of river inundations.

(2) **Deciduous forests.**—In which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.

(3) **Evergreen forests.**—These occur in regions of very heavy rainfall such as the west coast of the Peninsula, the eastern sub-Himalayan tract, and the moister parts of Burma and are characterised by the great variety and luxuriance of their vegetation.

(4) **Hill forests.**—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterised by various oaks, magnolias and laurels, while in Assam and Burma the *Khasia pine* (*Pinus khasya*) grows gregariously at elevations of 2,000 to 7,000 feet. In the North Western Himalaya the chief timber tree is the deodar (*Cedrus deod. a*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (*Pinus waltonii*), towards its upper limit the deodar merges into very large areas of spruce and silver fir while below it are found extensive forests of the long-needed pine (*Pinus longifolia*) which is tapped for resin.

(5) **Littoral forests.**—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoraceae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (*Sonneratia jonesii*).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sal forests of Northern Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(c) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption, these forests are of great importance in agricultural districts.

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience. These four classes of forest are not always sharply divided from each other and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reform Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer to its own province.

Territorial charges.—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests, provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service. These Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers. Heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties.

The Forest Service.—The Forest Service comprises three branches—

(1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 379 officers consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 281 have been recruited direct to the service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules 1923—

- (a) by nomination in England in accordance with such supplementary regulations as may be prescribed by the Secretary of State in Council
- (b) by competitive examination in India in accordance with such supplementary regulations as may be prescribed by the Governor-General in Council
- (c) by direct appointment of persons selected in India otherwise than by competitive examination,
- (d) by the promotion on the recommendation of local Governments of members of the Provincial Forest Service,
- (e) by the transfer or promotion of an officer belonging to a branch of Government Service in India other than a Provincial Forest Service

Further recruitment to the Indian Forest Service whether by promotion or direct appointment has been suspended until a decision is reached on the recommendation of the Services Sub Committee of the Indian Round Table Conference in regard to the provincialisation of the Indian Forest Service

In Bombay and Burma where Forest is a transferred subject new services called the Bombay and Burma Forest Services Class I have been created to take the place of the Indian Forest Service

(2) **The Indian Forest Engineering Service.**—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The future strength is not expected to remain at more than three i.e. (one each in Bombay, Madras and Punjab)

(3) **The Provincial Service.**—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Indian Forest Service in 1926. The class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Officers of this service are eligible for promotion upto 75 per cent of the posts in the Indian Forest Service in provinces other than Bombay and Burma such promotion being made by the Secretary of State for India. These officers are recruited and trained in India, their

recruitment being a matter for the local Governments. A certain number of posts in the service are filled by the promotion of specially promising Rangers. Owing to the establishment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1926 the Provincial Service course ceased to exist from 1928. The I F S College has also closed down at the end of Oct. 1932 as a result of the stoppage of recruitment to the Indian Forest Service and as a measure of economy.

(4) The Subordinate Service consists of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces, Bihar and Orissa, Bombay and Madras), the Burma Forest School at Pyinman (for Burma) and the Madras Forest College at Coimbatore (for Madras, Bihar and Orissa, Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912 respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organise the conduct of forest research and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1905 by the establishment, at the instance of Sir Sainthill Hardley Wilnot, then Inspector-General of Forests of a Forest Research Institute at Dehra Dun. The Forest Research Institute is under the administrative control of the Inspector General of Forests who is also the President. There are five main branches of research, namely Sylviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each branch being in charge of a research officer. The Timber Testing expert is engaged temporarily on short term contract. Indian Assistants have been appointed to receive the necessary technical training and experience with the object of eventually taking the place of experts if and when properly qualified. The Wood Technology, Paper Pulp, Wood Preservation and Seasoning Sections are in charge of Indian experts who have received special training in their various subjects in Europe and America.

As a result of Mr. R. S. Pearson's long and able administration of the Forest Economic Branch the Government of India now have at Dehra Dun a series of forest workshops and experimental laboratories without parallel anywhere else in the world and official reports show that the value of the experimental work done in them is daily exemplified by the increasing stream of inquiries received from persons doing business in timber and other forest products, not only in India but elsewhere in the world. The officers in charge of this branch received their training mostly in Europe and America and their efficiency is of a very high order.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new

scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings have been built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this, steady progress has been made in the investigations which should ultimately lead to the fuller and better utilisation of the raw products produced by Indian forests. Unfortunately the need for recruitment in all Government activities has stopped or curtailed many promising lines of investigation.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboo, leaves, fruits, fibres, gum, resins, barks, animal and mineral products, etc. The average annual output of timber and fuel from all sources during the quinquennium ended 31st March 1931, the latest date for which statistics are available, was 853,868,000 cubic feet against an average of 861,172,000 cubic feet per annum attained in the preceding quinquennium. The annual output of timber and fuel from all sources during the quinquennium 1928-29 averaged 862,317,000 cubic feet against an average of 840,900,000 c ft during the preceding quinquennium. The trade in bamboo was almost stationary with expectations of great development under commercial exploitation for paper pulp manufacture in the near future. The five years witnessed the initiation and development of certain large exploitation schemes, especially in Madras, which had hitherto met success. It was hoped in Madras by utilising modern American methods to extract and utilise very large quantities of valuable timbers but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The Provincial Government after this experience adopted a more cautious policy.

An important measure for the development of forests in the Andamans was sanctioned by the Government of India. Hitherto, elephants had been employed for extraction of timber, with the result that only the fringe of the forests could be touched. The new plan is for the employment of American methods. American logging machinery was purchased and an American expert engaged to take charge of the work. Owing, however, to the wide spread depression in the timber trade the employment of mechanical methods for the extraction of timber have been suspended for the present. Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are regarded as on the whole trustworthy if sufficient control over their operations is maintained.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognised. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons, while 3,000,000 persons, earning £30,000,000 a year, were employed in working up the raw

material yielded by the forests. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, ropeworkers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents employed in British India and nearly a further half million in Indian

States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The steady growth of forest revenue, expenditure and surplus during the past 66 years is shown in the following statement, which gives annual averages for quinquennial periods:—

Financial Results of Forest Administration in British India from 1864-65 to 1928-29 (in lakhs of rupees)

Quinquennial period	(Gross revenue average per annum)	(Expenditure average per annum)	Surplus (average per annum)	Percentage of surplus to gross revenue
	Lakhs	Lakhs	Lakhs	Lakhs
1864-65 to 1868-69	27.4	23.8	13.6	36.4
1869-70 to 1873-74	56.3	39.3	17.0	30.2
1874-75 to 1878-79	66.6	45.8	20.8	31.2
1879-80 to 1883-84	88.2	56.1	32.1	36.4
1884-85 to 1888-89	116.7	74.3	42.4	36.2
1889-90 to 1893-94	159.5	86.0	73.5	46.1
1894-95 to 1898-99	177.2	93.0	79.2	44.7
1899-1900 to 1903-04	198.6	112.7	83.9	42.7
1904-05 to 1908-09	257.0	141.0	116.0	45.1
1909-10 to 1913-14	296.0	163.7	132.3	44.7
1914-15 to 1918-19	371.3	211.1	160.2	43.1
1919-20 to 1923-24	551.7	367.1	184.6	33.5
1924-25 to 1928-29	503.4	351.1	244.2	40.9

Most of the provinces show a steady increase of surplus. The slump in trade of the last few years is evident in the surplus for the year 1920-21 which has fallen to 121 lakhs from a previous peak figure of 278 lakhs in 1926-27. The figure however, is still a most favourable one and indicates that the forests of India are being properly worked for the benefit of the country.

Agencies.—An agency has been established in India by the Government of India for the sale of Government timber and it is at present held by Messrs. Martin & Co. Calcutta. The agency held in England by Messrs. W. W. Howard Brothers terminated in December 1926 and the work of marketing Indian timbers in England (especi-

ally Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. This trade has not yet been raised to a satisfactory level because according to the official explanation, 'the intense conservatism in English timber trade and the difficulty of obtaining a footing for little known timbers have combined to make satisfactory sales very difficult.'

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President Forest Research Institute and College, New Forest, Dehra Dun U. P.

AREA OF FOREST LANDS, OUTPUT OF PRODUCTS AND REVENUE AND EXPENDITURE OF FOREST DEPARTMENT

* Includes Delhi Provinces and the British Parganas of Meerut (Central India).

† Unclassified state forests or public forest lands as they are often called, include in many provinces all unoccupied waste often entirely devoid of trees.

(a) So the statistics do not necessarily represent the wooded area.

(b) Excluding figures for Shan States and Karen.

(c) Includes Rs. 90,605 on account of receipts under the head Forest Research Institute and College.

(d) Includes expenditure under heads Imperial (Rs. 1,03,252), Forest Research Institute and College (Rs. 8,78,802).

(e) After taking into account deficits under Imperial (Rs. 1,03,252), Forest Research Institute and College (Rs. 8,78,802).

WIRELESS TELEGRAPHY AND TELEPHONY

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Sligo and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co., which operates the cable from Europe to India has become merged in the New Imperial and International Communications Ltd.

For reasons of economy most of the inland wireless stations in India were practically closed down and placed in charge of "Care and Maintenance" parties which carry out tests twice a month the exceptions being Peshawar Radio, which always maintained official communication with Kabul in Afghanistan and Kashmir in which are Jodhpur Radio, which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Rangoon's Agency for distribution to subscribing newspapers. The stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. New wireless stations for aeronautical purposes have been erected at Jodhpur in Bilawal, and Gaya. The wireless installations at Karachi and Calcutta have been modified so as to meet all the Wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes are under construction at Chittagong, Akyab Sandoway and Basnet.

The coast stations, however, have been maintained in a state of high efficiency and many improvements effected. The application of the Bandur system to the high-speed continuous wave wireless stations at Madras Port and Mingaladon (Rangoon) has proved extremely satisfactory and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route via Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handwork working during the worst periods.

For many years the Bombay stations known as Bombay Radio were located on Butcher Island in the Harbour, but during 1927 a fine

new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and now total about 90,000 per annum. Official telegrams are exchanged with the British Naval station at Matara (Ceylon) via Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula via Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon. In the early hours of March 19 telephonic communication between Bombay and London was established for the first time. The conversations were initiated from the *s.s. Belgica* and a tourist ship lying in Bombay Harbour and were made possible through the courtesy of Standard Telephones and Cables Limited in conjunction with the International Marine Radio Company.

Safety at Sea.—A noticeable feature of wireless development during the past two years has been the provision of direction-finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marconi beacon was erected on Kennedy Island during 1927 to guide shipping approaching Bombay harbour. All ships equipped with wireless direction finders will now be able to obtain exact knowledge of their whereabouts at a distance of 150 miles from the coast. The beacon is an experiment and is likely to be the first of many others along the coast of India. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power the broadcasts were tuned in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from licence fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a licence to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta,

the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of three kwatts, the same as that of the 21.0 stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages.

Bombay broadcasts normally on a wavelength of 367 metres, and Calcutta on 370 metres. Reception in either of these cities, and for a distance of twenty or thirty miles around, is possible on crystal sets of which a very large number have been sold. Valve sets are necessary for those living further afield, but although there has been a considerable demand for these the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed. Farly with a view to overcoming this problem and to render broadcasting available on two-valve sets in any part of India, the Broadcasting Company investigated the possibility of transmitting simultaneously on long and short waves. It took no action on the results of such investigations.

The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India, in the Industries and Labour Department. Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the Subject (now the Hon. Sir Joseph Bhore) and upon it sit at the present time Messrs N. B. Macleod and R. M. Durrani, M.L.A., Bombay, R. H. Roylands and K. G. Neogy, M.L.A., Calcutta. Mr. R. Coburn, Financial Adviser to Government in the Posts and Telegraphs Department and B. Rama Rao, Joint Secretary to Government in the Industries and Labour Dept. It is now proposed to establish a series of additional broadcasting stations in different parts of India so as to spread broadcasting receivable on low powered sets throughout the land. Important proposals with this purpose in view were discussed by the Advisory Committee in Calcutta in December, 1930.

Licences.—Broadcast receiving licences are issued at Head Post Offices at a fee of ten rupees per year and cover the use of receiving sets throughout British India except Baluchistan and the North West Frontier Provinces. Licences for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, more than 300 have been issued. The number of traders in wireless apparatus who are required to take out special Import licences has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting.

Prospects.—The Government of India have always encouraged the development of wireless

in India by private enterprise and to this source that India may look in the future for considerably increased internal radio communication. There are two most promising lines of development, viz.—

(a) Erection of small sets either for speech or music in districts where no land lines exist, and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either music or speech at will and if need for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(b) The use of radio as a substitute for land line to form the trunk telephone route between two cities which already have telephone facilities.

These would it is thought open up a new industry which if properly fostered would very soon extend its sales outside the limits of India. It is believed that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and such an industry would find the right kind of skilled labour already in India.

Radio Telephone Services.—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1933 when His Excellency Sir Frederick Sykes, Governor of Bombay, and Sir Samuel Hoare, Secretary of State for India, exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for the past six years by the Indian Radio and Cable Communications Company between India and the United Kingdom and, since the beginning of this year, between India and Japan. Initially the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged and within a month it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world. Similarly there is a gradual extension of the area covered in India, and when the improvement of the land lines has been completed nearly every important city will be in direct telephonic communication with England and the rest of the world.

Many technical problems are involved in the perfection of the India-England wireless telephone not the least of which is the ensuring of secrecy. When the service was first opened reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be tapped with the greatest ease, but later 'secrecy gear' was installed.

Any private telephone owner will be able to use the service for an overseas call. Before doing so, however, he will have to place a deposit of Rs. 100 with the Divisional Engineer, Telegraphs Bombay.

The charge for a 3 minutes conversation to (a) places in England, Scotland and Wales is Rs. 30. (b) Northern Ireland (Belfast) and the Isle of Man Rs. 34. Each additional minute's conversation to places under (a) will cost Rs. 24-11 and to (b) Rs. 28.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785, but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty three years earlier Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1841. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1685, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1792. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Herald*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1886. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780 and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stockholder in 1836.

From its commencement the press was jealously watched by the authorities, who set serious restraints upon its independence and pursued a policy of discouragement and

rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Sir R. B. Cunningham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835 once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being was the *Bombay Times* which was started towards the close of 1835 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791 ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Darpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1823 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny as freedom had to be temporarily controlled by the Censoring Act which Censoring passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 10 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation but the rise in

influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Moonjeet flourished in this generation. The *Chief and Military Gazette* was originally published in Simla as a weekly paper the first issue being dated June 22nd 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mohawille* originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Chief and Military Gazette* acquired and incorporated the *Mohawille*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW

Before 1885 all printing of books and paper was subject to licence by the Governor-General in Council and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1887 by the present Press and Registration of Books Act and except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910 was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence but also with other specified classes of published matter, including any words or signs tending to reduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication, (ii) control over publishers of newspapers, (iii) control over the importation into British India and the transmission by the post of objectionable matter, (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending—

- (1) The Press Act should be repealed.
- (2) The Newspapers Incitements to Offences Act should be repealed.
- (3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below. (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities. (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act, (c) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I P O subject to review on the part of the local Government and challenge by any persons interested in the courts. (d) any person challenging the orders of Government should do so in the local High Court, (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months (g), the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

Press Association of India.—As the end of 1915 this Association was formed in Bombay according to the articles of constitution "its objects shall be to protect the Press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities

to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a Council.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1856, and was the subject of a minute by Mr James Wilson when Finance Member, in 1859. Again, in 1867 Mr Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a rapprochement on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. Put very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank—Under the Imperial Bank of India Act (XLVII of 1920), the control of the Bank is entrusted to a Central Board of Governors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board with the previous sanction of the Governor-General in Council may determine. The Central Board of Governors consists of—

- (a) Managing Governors not exceeding two in number, appointed by the Governor-General in Council on recommendation by the Central Board,
- (b) the Presidents, Vice-Presidents and Secretaries of the Local Boards
- (c) the Controller of the Currency, or other officer nominated by the Governor-General in Council and
- (d) not more than four non officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Controller of the Currency and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not to vote under the agreement with Government. The Governor-General in Council is entitled to issue instructions to the Bank in respect of any matter which in his opinion vitally affects his financial policy or the safety of the Government balances, and if the Controller of the Currency or such other officer of Government as may be nominated by the Governor-General in Council to be a Governor of the Central Board shall give notice in writing to the Managing Governors that he considers that any action proposed to be taken by the Bank will be detrimental to the Government as affecting the matters aforesaid, such action shall not be taken without the approval in writing of the Governor-General in Council. Under the Imperial Bank of India Act provision was made for the increase of the capital of the Bank. The capital of the three Presidency Banks consisted of 84 crores of rupees in shares of Rs. 100 each, fully subscribed. The additional capital authorised was 74 crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 114 crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 5,15,00,000 and the Balance Sheet of 30th June 1932 showed the Government balance at Rs. 19,08,32,295, other deposits at Rs. 61,49,44,010 and Cash Rs. 22,01,87,692, with a percentage of Cash to liabilities of 26.97.

Class of Business—The Imperial Bank of India Act follows the Presidency Banks Act of 1876 in defining absolutely the class of business

in which the Bank may engage, though the older limitations are modified in some minor points. It permits for the first time the constitution of a London Office and the borrowing of money in England for the purpose of the Bank's business upon the security of assets of the Bank, but not the opening of cash credits, keeping cash accounts or receiving deposits in London except from former customers of the Presidency Banks. The Act provides for an agreement between the Bank and the Secretary of State, and this agreement, which was signed on the 27th January 1921 and is for a period of ten years determinable thereafter by either party with one year's notice, provides, *inter alia*, for the following important matters—

- (1) All the general banking business of the Government of India is to be carried out by the Imperial Bank

- (2) The Bank will hold all the Treasury Balances at Headquarters and at its branches. This involves the abolition of the Reserve Treasury system.

- (3) Within five years the Bank undertakes to open 100 new branches of which the Government of India may determine the location of one in four. The branches and agencies of the three Presidency Banks prior to the date of amalgamation numbered 69, including the Colombo branch of the Bank of Madras. The Bank of Bengal had no branches prior to the proposal to transfer Government business to the Bank in 1861-62 but no less than 18 branches were established before 1868.

- (4) The management of the Public Debt will continue to be conducted by the Bank for specified remuneration.

In Schedule I, Part 1, of the Act the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are —

(1) Advancing money upon the security of —

- (a) Stocks, &c., in which a trustee is authorised by Act to invest trust moneys
- (b) Securities issued by State aided Railways, notified by the Governor-General-in-Council
- (c) Debentures, or other securities issued under Act, by, or on behalf of, a District Board
- (d) Goods, or documents of title thereto, deposited with, or assigned to the Bank
- (e) Accepted Bills of Exchange or Promissory Notes
- (f) Fully paid shares and debentures of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in a, b, c, d and, if authorised by the Central Board in c.

(2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge

(3) Drawing, accepting, discounting, buying and selling bills of exchange and other negotiable securities payable in India and Ceylon and, subject to the directions of the Governor-General-in-Council, the discounting, buying and selling of bills of exchange payable outside India for and from or to such Banks as may be approved

(4) Investing the Bank's funds in the securities referred to in (1) a, b, c.

(5) Making Bank Post Bills and Letters of credit payable in India and Ceylon

(6) Buying and selling gold and silver

(7) Receiving deposits.

(8) Receiving securities for safe custody

(9) Selling such properties as may come into the Bank's possession in satisfaction of claims

(10) Transacting agency business on commission.

(11) Acting as Administrator, for winding up estates

(12) Drawing bills of exchange and granting letters of credit payable out of India for the use of principles in connection with (11) and also for private constituents for bona fide personal needs.

(13) Buying, for the purpose of meeting such bills, &c., bills of exchange payable out of India at any time not exceeding six months

(14) Borrowing money in India

(15) Borrowing money in England upon as security of assets of the Bank, but not otherwise.

The principal restrictions placed on the business of the Bank in Part 2 are as follows —

- (1) It shall not make any loan or advance —
 - (a) For a longer period than six months,
 - (b) upon the security of stock or shares of the Bank,
 - (c) save in the case of estates specified in Part 1 (Courts of Wards) upon mortgage or security of immovable property or documents of title thereto
- (2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons or firms unconnected with each other in general partnership.

The Balance Sheet of the Bank as at 30th June 1932 was as follows :—

LIABILITIES	Rs	a	p	ASSETS	Rs	a	p

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India, but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated. At one time the Banks carried on their operations

in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India.

No information is available as to how far such Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1931 of the under-noted Banks will give some idea of this.

**LIABILITY ON BILLS OF EXCHANGE RE-
DISCOUNTED AND STILL CURRENT**

Chartered Bank of India, Australia and China Ltd	2 417 000
Eastern Bank, Ltd	443 000
Hongkong and Shanghai Banking Corporation	1 864,000
Mercantile Bank of India Ltd	1 712,000
National Bank of India Ltd	3 138 000
P & O Banking Corporation, Ltd	1 645,000
	11 219,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

An interesting event in Indian Banking history is the recent entry in the Banking field here of one of the English "Big Five." This has been brought about by the acquisition of the business of Cox & Co., by Lloyds Bank.

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1931 —

In Thousands of £

JOINT STOCK BANKS

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new foundations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events of ten years ago confidence has been largely restored. But in April 1923 the Alliance Bank of India suspended payment and is now in voluntary liquidation. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets. —

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges exorbitant rates of interest to suspicious people, but this is hardly fair to the people known as 'shroffs' in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in this capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner: A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a bonded broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A bonded usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this

point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawer. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, viz., (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shown that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent per mensem above the Bank's rate of discount, or $1\frac{1}{2}\%$, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Maltanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonins" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as

a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate, but this does not always apply and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rate since the Imperial Bank was constituted—

Year	1st Half-year	2nd Half-year	Yearly average.

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Imperial Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members

and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agree with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below —

Total amount of Cheques Cleared Annually

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles) the East Indian Railway, Bombay to Kalyan (39 miles) Great Indian Peninsula Railway and Madras to Arkonam (89 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of 252 millions. These companies were (1) the East Indian, (2) the Great Indian Peninsula, (3) the Madras, (4) the Bombay, Baroda and Central India, (5) the Eastern Bengal, (6) the Indian Branch, later the Oudh and Rohilkhand State Railway and now part of the East Indian Railway, (7) the State of Punjab and Delhi now merged in the North Western State Railway, (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent coupled with the free grant of all the land required in return the companies were required to share the surplus profits with the Government after the guaranteed interest had been met. The interest charges were calculated at 22½ to the rupee. The Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions, the result was that by 1869 the deficit on the Railway budget was Rs 166 lakhs. Seeking for some more economical

method of construction the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1859-65), since absorbed by the Great Indian Peninsula, the Bengal Nagpur (1859-67), the Southern Mahratta (1862), and the Assam Bengal (1861) were constructed under guarantees but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers

In 1870 embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted—the Nildrid, the Delhi-Umballa, Kalka, the Bengal Central and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Mysore Government guaranteed the interest on 380 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened of which all save 45 were on the broad-gauge. During the next ten years there were opened 4,280, making the total 8,494 (on the broad gauge 6,562, the metre 1,865 and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Fenjich incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outpost at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly. It is said that they might have been ballasted with rupees. The long tunnel under the Khojak Pass added largely to this necessary but unprofitable outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line so that the dividend might rise to four per cent but the rebate was limited to 20 per cent of the gross earnings. Under these conditions there were promoted the Ahmedabad-Franzer, the South Behar and the Southern Punjab although only in the case of the first were the terms strictly adhered to. The Barak Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent trustee stocks, they were revised in 1884 to provide for an

absolute guarantee of 8 per cent with a share of surplus profits, or rebate up to the full amount of the main line's net earnings in supplement of their own net earnings, the total being limited to 24 per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 24 per cent. and of rebate from 24 to 8 per cent. with equal division of surplus profits over 8 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab, Burma and Bombay.

Railway Profits begin

Meantime a much more important change was in progress. The gradual economic de-

velopment of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Oudh Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon the railway revenue must fluctuate, there was no reason to anticipate a further deficit, but the net railway gain decreased to £2,767,000 in 1920-21 and there was an annual loss of £6,188,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921 this loss was changed into a gain of £814,000 in 1922-23.

The results in succeeding years will be seen from the following statements —

	Contribution to General Revenues.	Railway Reserve Fund	Total Gain
	£	£	£
1923-24			4,487,712
1924-25	4,941,887	4,685,935	9,577,872
1925-26	4,135,544	2,864,936	6,990,580
1926-27	4,488,045	1,108,438	5,596,478
1927-28	4,707,229	3,460,000	8,167,229
1928-29	3,938,834	1,937,885	5,871,725
1929-30	4,588,950	1,661,650	6,257,200
1930-31	4,801,775	8,192,625	3,390,850
1931-32	4,020,150	—	6,900,000

For the first time the deficit was met by the balance in the reserve fund and also in part by the Depreciation fund.

Ruppes have been converted into £ at the average rate of exchange for the year

The depressed conditions of Indian trade during 1930-31 to which should be added the continued Civil Disobedience and motor bus competition combined to reduce gross traffic receipts by Rs 7½ crores below the previous year. This resulted in a net loss of Rs 5½ crores compared with the gain of Rs 4.04 crores in 1929-30. In order to meet the contribution to General Revenue, the Railway Reserve Fund had to be drawn upon to the extent of nearly Rs 11 crores.

Contracts Revised

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent dividend guaranteed at 2½d. per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1900 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of twenty-four years from 1880 when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000 equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors all the other guaranteed companies which have been acquired under similar conditions as their contracts expired have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken Government have a magnificent asset in their railway property.

Improving Open Lines

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Munira line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk

system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed but the poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories has for some time kept this scheme in the background. The possibilities however of this construction being undertaken have improved considerably recently and a detailed survey is being carried out. There does not exist any through rail connection between India and Burma although several routes have been surveyed, the mountainous character of the region to be traversed and the easy means of communication with Burma by sea rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920 the three routes to be surveyed being the coast route the Manipur route and the Kukuang valley route. The metre-gauge systems of Northern and Southern India will also probably one day be connected and Karachi given direct broad-gauge connection with Delhi a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose and a small Committee set in London under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

During 1930-31 the principal improvements on open line consisted in the following:

- Doubling the Cawnpore-Tundla section of the E I Railway.
- Doubling the Tatanagar-Kharak block but section of the B N Railway.
- Isolation of the main line at 60 Stations between Kharagpur and Nagpur B N Railway.
- Remodelling and strengthening the Kotu Bridge over the river Indus N W Railway.
- The completion of Bombay Central Station, B B & C I.

Government Control and Re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise close supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As

traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organisation and working of the Indian Railways and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy, he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organisation was further fully examined by the Awerth Committee in 1921 and a revised organisation which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the State-worked systems aggregating 18,499 miles in on the 31st March 1929,

(b) the representative of the predominant owning partner in systems aggregating 29,481 miles,

(c) the guarantor of many of the smaller companies, and

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Awerth Committee (1920-21) presided over by Sir William Awerth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr C D M Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not as was the President, subject to be out voted and over-ruled by his colleagues on the Board. The detailed reorganization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantage of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1923 to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief of the Chief Commissioner and the members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them: Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity work carried out on railways and to undertake on its own the many forms of railways publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvement of the conditions of service of the staff generally and of the lower paid employees in particular.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The Technical Officer under the Railway Board was transferred to this office as a Deputy Controller.

The present superior staff under the Railway Board therefore consisted of 5 Directors, 5 Deputy Directors, a Secretary and an Assistant Secretary in addition to the Controller of Railway Accounts and his officers to the Central Publicity Officer and the Officers in the Central Publicity Bureau and to the Chief Controller and the officers in the Central Standardisation Office.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the Agent but have

certain powers of direct reference to the Financial Commissioner of Railways.

Management

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. Some of the Company managed railways are still on a departmental basis with a Traffic Manager, Chief Engineer Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the Transportation and Commercial duties of the Traffic Manager and combined the supervision of Locomotive running with Transportation. State managed lines have generally adopted the divisional organisation.

Clearing Accounts Office

A Clearing Accounts Office with a Statutory Audit Office attached thereto, was opened in December 1928 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure and as the experiment was completely successful the Board of Directors of the Bombay, Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Accounts Office, and it was hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate registers and of decentralisation of Traffic Accounts Work no definite decision has yet been arrived at.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

The Indian Gauge.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870 when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost \$11,000 a mile. After much deliberation, the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional, they were to be converted into broad-gauge as soon as the traffic justified it, consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad gauge. So, except in the Indus Valley where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected but the necessary link from Khanwa by way of the Nizam's Hyderabad-Godavari Railway cannot be long delayed. All the Burma lines are on the metre-gauge. Certain feeder and hill railways have been constructed on the 2'-6" and 3'-0" gauges, and since the opening of the Barak Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre gauge.

State versus Company Management.—The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Awerth Railway Committee. That Committee was unfortunately unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1925, the

non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over essentially on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 42 million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 34 million and 1½ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elsewhere where State ownership has thrown on the State the obligation to manage its own railways, has been to create by a statute an authority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsula Railway followed suit. The Malat-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st 1929 the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately Rs 703 lakhs will be a gain to Government of about Rs 47 lakhs a year.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the company was acquired and its management taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendation of the Aoworth Committee in 1921 the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923 that the railways in India should be so worked as to yield an average return of at least 5½ per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced to the Assembly on the 3rd March 1924 recommending to the Governor-General in Council—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings

(2) The contribution shall be a sum equal to five-sixths of 1 per cent on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one fifth of any surplus profits remaining after payment of this fixed return subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for

(i) equalising dividends, that is to say of securing the payment of the percentage contribution to the general revenues in lean years,

(ii) depreciation

(iii) writing down and writing off capital,

(b) the improvement of services rendered to the public,

(c) the reduction of rates

(4) The railway administration shall be entrusted, subject to such conditions as may be prescribed by the Government of India, to bor-

row temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e. will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways.

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final resolution agreed to by the Assembly on September 29th 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent instead of 5/6th per cent on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 3rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 2rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 5 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The period has now arrived for this separation to be reconsidered and revised but due to the economic depression the matter has been held in abeyance.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system was first adopted on the Great Indian Peninsula Railway during 1922-23.

Rates Advisory Committee

The Rates Advisory Committee was constituted in 1923 to investigate and make recommendations to Government on the following subjects—

- (1) Complaints of undue preference
- (2) Complaints that rates are unreasonable in themselves
- (3) Complaints or disputes in respect of terminals
- (4) The reasonableness or otherwise of any conditions as to the packing of articles specially liable to damage in transit or liable to cause damage to other merchandise
- (5) Complaints in respect of conditions as to packing attached to a rate.
- (6) Complaints that Railways do not fulfil their obligations to provide reasonable facilities under Section 42 (3) of the Indian Railways Act

During 1930-31 three cases were reported on while in 1931-32 only two cases were considered.

Inauguration of the Main Line Electric Service, G. I. P. Railway

The inauguration of the electrified main line section of the G. I. P. Railway from Kalyan to Poona took place on the 5th November 1929 and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bore Ghat Reversing Station. The problem of eliminating the Reversing Station had been seriously considered on several occasions in the past but it was not until 1923 when electrification had been definitely decided upon, that final survey operations became imperative.

Apart from the location of the realignment which called for the adoption of methods unusual in ordinary survey practice the works involved in the construction of this double line broad-gauge section of railway were of considerable magnitude chiefly in the form of heavy tunnel construction.

There are three tunnels in all aggregating 4,536 feet or 87 of a mile. The longest of these is 3,100 feet built throughout on a curve of the sharpest radius which occurs in these ghats. Allowing for curvature and the considerably increased spacing of tracks necessitated by the adoption of the latest standard dimensions, a tunnel section of 34 feet 6 inches wide and 24 feet 6 inches high was derived upon. This is considered to be the largest tunnel section in the world.

The steam trains to Poona took approximately 6 hours for the journey and it is anticipated that with electric traction this timing will be now reduced to approximately 3 hours.

With the opening of the electrified section between Kalyan and Igatpuri in October 1930 it is believed that the G. I. P. Railway has the greatest length of electrified main line in the British Empire and the entire scheme will be one of the most important main line electrifications in the world.

Publicity

The year 1929-30 marked a very considerable advance in the Publicity activities of the Indian railways. The Central Publicity Bureau of the Railway Board was inaugurated on 1st April 1927, a Chief Publicity Officer was appointed and provided with an Assistant and a small clerical staff. The office was located in Victoria Terminus, Bombay, it being felt that to commence with Bombay's position as the main port of arrival in India, closer touch could be kept with travellers and furthermore, Bombay presented certain distinct advantages from the point of view of printing facilities, etc.

For 1928 however the office was moved to Delhi as being more central and in closer touch with the Railway Board. Among some of the principal lines upon which it was decided to concentrate attention were—

- Cinema film production and display
- Poster production and display
- Pamphlet production and display
- Publication of an *Indian State Railways Magazine*
- Demonstration Trains
- Upper and Lower class special excursion trains
- Press propaganda in India
- Press propaganda in Europe, America and other parts of the world
- Reciprocal publicity with the leading railways of the world

Shortly after the inauguration of the Central Publicity Bureau the need was felt for a representative in England to give information and advice to potential travellers and to handle enquiries arising out of the advertising campaign which it was decided to carry out. A Publicity Officer was appointed and temporary offices secured in London in which an Indian State Railways Bureau was opened. It was soon found that separate permanent offices were required and these have now been obtained in 57, Haymarket London where sufficient accommodation is available to deal adequately with the many visitors who come there. With the opening of India House a Branch Office has also been provided there and this will deal more particularly with enquiries concerning Goods rates but general enquiries can also be answered there. In order to obtain an adequate share of the American tourist traffic an Office has also been opened in New York and a Resident Manager appointed there. This office was at first temporarily in accommodation kindly provided by the Canadian Pacific Railway in their General Offices at 342, Madison Avenue, New York, but now has its own commodious office in an excellent site at Delhi House, 38 East 57th Street New York.

Owing to the financial stringency it was decided in 1931 to cut down the Bureau and

being directly under the Railway Bureau. The work carried out remains however unchanged except in scope and the film Department was definitely closed down.

The Branch office in India House was also closed and the total staff in the London Bureau reduced from 3 officers to 2 officers.

Capital Expenditure.—The outlay during the year 1928-29 was Rs. 27.58 crores of which Rs. 25.41 crores represented expenditure incurred on State-owned lines.

Considerable progress has been made with the programme of new construction. Close on 1,500 miles of new railway were opened for traffic during 1928-29 and at the close of the year there were some 2,100 miles under construction.

Trade review.—The earnings of railways are dependent on the general prosperity of the country which in the case of India is most easily measured by the agricultural position and the returns of foreign trade.

Exports.—The total value of exports in 1930-31 amounted to Rs. 220 crores as compared with Rs. 311 crores in the previous year. A decline of Rs. 91 crores or of 29 per cent as compared with that year.

Shipments of raw jute declined from 607,000 tons valued at Rs. 27.17 crores to 620,000 tons valued at Rs. 12.88 crores. Manufactured jute also declined from Rs. 51.92 crores in 1929-30 to Rs. 31.89 crores in 1930-31. Raw cotton fell from 727,000 tons (Rs. 65.80 crores) to

701,000 tons (Rs. 48.33 crores). Cotton twist and yarn from 24.6 million pounds (Rs. 1.90 crores) to 23.5 million pounds (Rs. 1.58 crores). Cotton piecegoods from 98 million yards (Rs. 3.32 crores) to 83 million yards (Rs. 1.35 crores). The export of oleseeds also suffered due to a large extent to the falling off in shipments of ground nuts by 113,000 tons in quantity and Rs. 6.72 crores in value. The export of grain pulses and flour advanced however by 104,000 tons to 2,614,000 tons mainly due to larger shipments of wheat. Coffee also improved from 184,000 cwt (Rs. 1.45 crores) to 293,000 cwt (Rs. 1.92 crores).

Imports.—As compared with 1929-30 the total imports of foreign merchandise fell by Rs. 76 crores or 31 per cent. The total value during the year being Rs. 1.65 crores.

The principal decreases were yarn and textile fabrics (Rs. 39 crores), metals and manufactures thereof (Rs. 8 crores), sugar (Rs. 5 crores), machinery and mill work (Rs. 4 crores), grain, pulses and flour (Rs. 3 crores).

Passenger earnings showed a decrease in 1930-31 as compared with 1929-30 of 11.1 per cent namely from Rs. 38.58 crores to Rs. 34.29 crores.

50 Million less passengers were carried by Class I railways during the year under review. Goods earnings decreased by Rs. 4.40 crores chiefly under fuel for the public and railways, cotton raw and manufactured, metallic ores, rice, iron and steel wrought.

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below—

Commodity	1929-30		1930-31		Increase + Decrease— in Earnings
	Handled on Home Line	Earnings	Handled on Home Line	Earnings	
	Tons	Rs.	Tons	Rs.	
(1) Fuel for public home & Foreign Railways	2,91,705	10,22,476	2,70,920	9,56,956	-65,520
(2) Materials and Stores on Revenue account	1,97,074	3,11,567	1,80,089	2,88,289	-23,278
(3) Wheat	21,788	2,08,092	25,317	2,69,011	+60,919
(4) Rice	57,115	4,16,771	51,991	3,66,443	-50,328
(5) Grain and Pulse and other grains	41,859	3,53,457	39,126	3,42,008	-11,454
(6) Marble and stone	39,274	93,440	37,067	89,051	-4,389
(7) Metallic ores	39,304	1,44,945	36,655	92,490	-52,455
(8) Salt	24,133	1,96,320	22,954	1,81,080	-15,240
(9) Wood, wrought	17,616	34,313	15,949	74,768	+40,455
(10) Sugar	12,913	2,08,158	12,680	2,08,078	-80
(11) Oil seeds	42,066	3,94,863	41,899	4,00,754	+5,891
(12) Cotton, raw, and unmanufactured	14,362	4,29,323	13,658	3,31,595	-97,728
(13) Jute, Raw	16,695	1,46,356	15,699	1,35,642	-10,714
(14) Fodder	12,320	61,204	10,287	50,274	-10,930
(15) Fruits and vegetables	15,956	1,07,951	15,873	1,02,751	-5,200
(16) Iron and steel wrought	20,796	2,45,225	17,952	2,06,827	-38,401
(17) Kerosene and petrol	11,319	1,63,795	10,213	1,48,965	-14,830
(18) Gun, Jagree, Molasses &c.	11,202	98,295	11,674	96,185	-2,110
(19) Tobacco	5,537	81,866	4,745	73,013	-8,853
(20) Provisions	18,994	2,89,082	18,724	2,85,920	-3,162
(21) Military stores	4,313	37,933	4,485	32,470	-5,463

Open Mileage—The total route mileage on March 31st, 1932, was made up of—

Broad-gauge	21,106 miles
Metre-gauge	17,529 "
Narrow-gauge	4,173 "

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows—

Class I	38,460
Class II	3,229
Class III	1,124

Class I includes all the 5' 6" gauge mileage 14,866 miles or 87 per cent. of the metre-gauge, and 2,156 or 53 per cent. of the narrow gauges.

The State owned 31,709 miles or about 75 per cent and directly managed 18,897 miles or about 45 per cent of the total mileage open at the end of the year

During the year 1931-32, 670 miles of new lines were opened for public traffic. Of this mileage 476 miles belong to Class I

Class I Railways.	Number of seats in passenger carriages			
	1st.	2nd	Inter	Third
5'-6"	2,831	41,964	87,080	689,265
2'-3½"	11,004	14,865	12,800	379,814

Financial Results of Working—The total gross earnings of all railways in India during the year 1931-32 amounted to Rs 87.88 crores as compared with 96.83 crores in 1930-31. These figures, however, include railways owned by Indian States and companies for which the Government of India has no direct financial responsibility. The figures of receipts and expenditure for railways with which the Government are directly concerned are as follows—

	(Figures in thousands)	
	1931-32	1930-31
	Rs	Rs.
(a) Gross Traffic Receipts	86,61 00	92,08,66
(b) Surplus profits from Subsidized Companies	1, 00	20 86
(c) Interest on Depreciation and Reserve Funds	98 00	1 32 21
(d) Other Miscellaneous Railway Receipts	12 00	20 89
Total (Receipts)	87 83 00	96,83,12
	Rs	Rs
(a) Working expenses (excluding depreciation)	42 81 00	54,88,94
(b) Depreciation	13 46,00	13 06,53
(c) Surplus profits paid to Companies	84,00	1,15,30
(d) Land and subsidy to Companies	0 00	5 90
(e) Interest	38 07	32,71 55
(f) Miscellaneous Railway Expenditure	46,00	62 68
Total	97,03,00	1 02,01,90
Net Loss	9 20,00	5 18 78
Contribution from Railway to general revenues	53,60,00 00*	5 73,57
Amount transferred from Railway Reserve Fund	4 95 00	10,92,35
Description Fund	4,22,00	

* This payment has been held in abeyance

After meeting all interest and annuity charges Government therefore received a net profit of 4 04 crores on the capital at charge of the State minus the net receipts that is the gross receipts minus the working expenses, have in recent years given the following returns —

	Percent
1913-14	5 01
1923-24	5 24
1924-25	5 85
1925-26	5 31
1926-27	4 95
1927-28	5 30
1928-29	5 22
1929-30	4 65
1930-31	N/A
1931-32	A/A

Up-to-date figures of the results of working of other countries are not available, but the following table compares the latest available figures of average receipts per ton mile of those countries which have published statistics of working later than 1919 —

	Receipts * per ton mile Pica.
United States of America 1929	5 70
United Kingdom 1929	15 15

	Receipts per ton mile Pica.
Japan 1927-28	7 28
Switzerland 1928	20 25
South Australia 1929-30	17 25
Canadian Railways 1929	5 75
India 1929-30	5 14

In the case of receipts per passenger mile the figures for United States of America and India are as follows —

United States of America 1929	14 78 pica
India 1929-30	3 28 "

while in England the present standard fare charged per mile third class is 18 pica

From the above it will be seen that railway transportation of freight in India is one of the cheapest in the world and still more so for passenger traffic.

An examination of the latest available figures of operating ratios of foreign countries brings out results not unfavourable to Indian Railways

	Year	Operating Ratio
United States of America	1930	74 per cent
France	1925	84 15 " "
English Railways	1928	79 40 " "
South African Railways	1928-29	77 80 " "
Argentine Railways	1927	71 05 " "
Canadian Railways	1929	81 21 " "
	1913-14	51 79 " "
	1925-26	82 69 " "
	1926-27	82 04 " "
	1927-28	81 39 " "
	1928-29	82 77 " "
	1929-30	85 02 " "
India ..		

Output of Railway owned Collieries — The output of railway owned collieries during 1929-30 was 3,184,206 tons out of a total of 6,773,559 tons consumed on class I Railways

For 1930-31 the output was 2,926,812 tons for a total of 6,628,014 tons
For 1931-32 the figures are 2,484,891 tons for a total of 6,759,398 tons

Number of Staff — The total number of employees on Indian Railways at the end of the year 1929-30 was 819,058 as compared with 808,493 at the end of 1928-29. The increase in route mileage during the same period was 812 miles. The following table shows the number of employees by communities on 31st March 1930, 1931 and 1932 —

	Europeans	Statutory Indians					Grand Total
		Hindus	Muham. madans.	Anglo- Indians	Other Classes	Total	
31st March 1930	4,981	579,040	132,348	14,847	36,716	812,752	817,733
31st March 1931	4,799	553,851	172,321	14,850	35,809	776,331	781,130
31st March 1932	4,516	589,819	157,714	18,549	34,426	725,713	730,219

Immobilisation.—The various Railway Companies managing State and other Railway Lines have followed the lead given by Government and accepted the recommendation of the Lee Commission that the extension of existing training facilities should be pressed forward as expeditiously as possible in order that recruitment in India may be advanced as soon as

practicable up to 75 per cent. of the total number of vacancies in the Superior Services of the Railway concerned.

Fatalities and Injuries.—During the year 1931-32 the number of persons killed decreased by 292 as compared with the previous year the number of passengers killed decreased by 82 and of passengers injured by 125.

The following table shows the numbers killed and injured separately under passengers, railway servants and others for 1929-30 as compared with 1928-29 :—

	Killed			Injured		
	1929-30	1930-31	1931-32	1929-30	1930-31	1931-32
A. Passengers—						
(1) Accidents to trains, rolling stock, permanent way, etc	6	12	8	69	140	93
(2) Accidents caused by the movement of vehicles used exclusively on railways	849	825	245	1,040	881	808
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	3		2	17	16	11
B. Servants—						
(1) Accidents to trains, rolling stock, permanent way, etc	38	26	10	174	132	157
(2) Accidents caused by the movement of vehicles used exclusively on railways	843	282	201	1,708	1,827	1,819
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	62	44	43	4,014	4,659	5,467
C. Others—						
(1) Accidents to trains, rolling stock, permanent way, etc	67	71	32	171	96	62
(2) Accidents caused by the movement of vehicles used exclusively on railways	2,481	2,397	2,322	774	735	736
(3) Accidents on Railway premises not due to Train accidents or to the movement of vehicles	21	24	19	87	61	47
Total	3,360	3,180	2,888	8,054	8,547	9,200

Of the total number of 2,888 persons killed 1,963 were trespassers on the line and 394 committed suicide.

Local Advisory Committees.—In the Annual Reports by the Railway Board on the working of Indian Railways references are made each year to the work that is being done by Local Advisory Committees on railways in bringing to the notice of their respective railways administrations matters affecting the general public

in their capacity as users of the railway. These committees have been established and are functioning on all Class I Railways except His Majesty's Highness the Nizam's State Railways and the Jodhpur Railway. During 1929-30, the Barvi Light Railway constituted an Advisory Committee for that line.

These committees constitute a valuable link between railways and their clientele.

THE CHIEF RAILWAYS IN INDIA.

The Assam Bengal Railway, which is constructed on the metre-gauge, starts from Chitragong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company

Mileage open	1 806
Capital at charge	Rs. 23,51 24,000
Net earnings	Rs. 56,16,000
Earnings per cent	2 81

Bengal and North Western

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatihar and the East Indian Railway at Benares and Mokameh Ghat.

Capital at charge	Rs. 20 01 97,000
Net earnings	Rs. 2 05 46 000
Earnings per cent	9 82

Bengal-Nagpur

The Bengal-Nagpur Railway was commenced as a metre gauge from Nagpur to Chhatishgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad gauge and extended it to Howrah Cuttack and Katal. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatnam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

Earnings per cent.	1 46

Bombay Baroda

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880 but the period was extended to 1905, and then renewed under revised conditions. In 1885 the Rajputana-Nalwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda Muttra, giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,665,581.

Capital at charge	Rs. 73,26 81,000
Net earnings	Rs. 4,11,98,000
Earnings per cent	5 62

Burma Railways

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected

with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1910, Sir Arthur Anderson said:—'During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chittagong and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any sanction been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1898 to a Company under a guarantee. From January 1st 1920, its working has been taken over by the State.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

Net earnings	Rs. 80 41,000
Earnings per cent	1 57

East Indian

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1860 the Government purchased the line, paying the share-holder by annuities, but leased it again to the company to work under a contract which was terminable in 1919. The contract was not terminated until January 1st 1925 when the State took over the management. From July 1st 1925 the Oudh & Rohilkhand railway was amalgamated with it.

Mileage open	4,348
Capital at charge	Rs. 1,47,23,75,000
Net earnings	Rs. 5,98,47,000
Earnings per cent.	4 06

Great Indian Peninsula

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poona to Rajahmundry, where it connects with the Madras Railway, and to Jabalpur where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 16½ miles on the Bhore Ghat and 9½ miles on the Thul Ghat which rise 1131 and 973 feet. In 1900 the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925 when the State took over the management

Mileage open	3 725
Capital at charge	Rs. 1,17,87,89,000
Net earnings	Rs. 2,85,00,000
Earnings per cent.	2 43

Madras and Southern Mahratta Railway

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north westerly direction in connection with the Great Indian Peninsula Railway and in a south westerly direction to Calcutta. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company.

Mileage open	3,220
Capital at charge	Rs. 52,85,62,000
Net earnings	Rs. 3,13,14,000
Earnings per cent.	6 02

The North Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1873 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Mileage open	7,092
Capital at charge	Rs. 1,18,53,69,000
Net earnings	Rs. 3,26,40,000
Earnings per cent.	2,87

Oudh and Rohilkhand

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre-gauge systems to the North and those to the South of the Ganges a third rail was laid between Bhurwal and Cawnpore. The Company's contract expired in 1899 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1925.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line, but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	2 495
Capital at charge	Rs. 44,57,77,000
Net earnings	Rs. 2,25,20,000
Earnings per cent.	5 65

The Indian States

The principal Indian State Railways are the *Nizam's*, constructed by a company under a guarantee from the Hyderabad State the Kathiawar system of railways constructed by subscriptions, among the several Chiefs in Kathiawar, the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs, and the railways in Mysore constructed by the Mysore State.

At the end of the financial year 1929-30 a total of 1257 57 miles of new lines was under construction distributed as follows —

Miles.

5' 6" gauge	780 77
3' 3½" gauge	467 51
2' 6" gauge	69 29

During 1929-30 sanction was accorded to the construction of new lines totalling 227 77 miles.

Miles

5' 6" gauge	93 00
3' 3½" gauge	115 17
2' 6" gauge	19 00

INDIA AND CEYLON

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Ramswaram to Mannar has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi the southernmost point of Ramswaram Island and the Ceylon Government Railway to Palamannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as 'Adam's Bridge,' to supersede the ferry steamer service which has been established between these two points is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Palamannar Point on the Ceylon side a length of 20.05 miles of which 7.19 will be upon the dry land of the various islands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Ramswaram Island and Mannar Island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1911, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The

coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kawkpku stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sanyaw and thence north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,560, 3,600 and 8,000 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country, capable of cultivation though at present it is only thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 feet aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

Main results of working of all Indian Railways treated as one system

—	Particulars	Miles	1924-25	1925-26	1926-27	1927-28	1928-29	1929-30	1930-31	1931-32

Abstract The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health-related quality of life (HRQL) of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were randomly assigned to either a 12-week training program or a control group. The training program consisted of three sessions per week, each lasting 45 minutes. The control group did not participate in any training. The subjects were assessed at baseline and at 12 weeks. The primary outcome was the change in HRQL, measured using the SF-36 questionnaire. The secondary outcome was the change in physical fitness, measured using the 6-minute walk test. The results showed that the training program had a significant positive effect on HRQL and physical fitness. The subjects in the training group showed a significant increase in HRQL scores and a significant increase in the distance walked in the 6-minute walk test. The subjects in the control group showed no significant change in HRQL scores and no significant change in the distance walked in the 6-minute walk test. The results suggest that a 12-week training program can improve HRQL and physical fitness in sedentary, middle-aged women.

(a) Excludes antimonial lead. (b) Export & b values (c) Export values. (d) Revised

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out, in all but remote localities the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, coppers, copper, lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The

high quality of the native-made iron, the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago, the chemical manufacturer of Europe found among his by-products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper, and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

COAL

Most of the coal raised in India comes from Singareni in Hyderabad, and in Central Provinces the Bengal and Bihar and Orissa—Gondwana mines but there are a number of smaller coal fields. Outside Bengal and Bihar and Orissa the most important mines are those at

Provincial production of Coal during the years 1929 and 1930.

(a) Estimated

The export statistics for coal during 1930 show a large decrease of over 264 000 tons reversing the increase in the previous year of over 100 000 tons, the total exports of coal and coke falling from 726,610 tons to 461 188 tons 1 283 tons of the latter being coke (see Table 8). The largest portion of this decrease in exports is due to Hongkong which took only some 62 000 tons as against some 196,000 tons in the previous year. As before the major portion of the exports went to Ceylon, which, however, took 84,000 tons less than during the previous year. Exports to the Straits Settlements (including Labuan), and to the Philippine Islands and Guam showed substantial decreases. The only country to show any increase was the United Kingdom, which took 27 587 tons against 110 tons in the previous year. Other countries absorbed over 12 000 tons less.

This figure of exports although the lowest for the 5 years (1926 to 1930) during which the Indian Coal Grading Board has been established, is nevertheless double those of the five years preceding the establishment of this Board the present fall must be regarded as a reflection of the bad trading conditions.

Imports of coal and coke did not show during 1930 a parallel fall as they decreased only from 318,000 tons in 1929 to 217 029 tons in 1930. 18,702 tons of the latter consisted of coke (see Table 10). This slight fall is mainly the balance of a fall of some 14 000 tons in imports from the United Kingdom balanced by an increase of some 11 000 tons from South and Portuguese East Africa. The total imports are now less than half those of the pre-war quinquennium and a comparison of pre-war imports and exports with the figures from 1926 to 1930 shows that the depression in the Indian coal industry, which continued till nearly the end of 1928 can no longer be looked upon as

attributable to the competitive effect of foreign imported coal. The average surplus of exports over imports during the years 1926 to 1930 was in fact, greater than the surplus during the pre-war quinquennium.

Labour in the Coal Mining Industry

The average number of persons employed in the coalfields during the year showed a moderate increase (2 5 per cent) accompanying the small increase in production (1 6 per cent). The average output per person employed, therefore showed a slight decrease to 129 1 tons in contrast with the advances of recent years which have been 110 5 tons for 1922, rising to 113 1 tons for 1926 122 8 tons for 1927 125 5 tons for 1928 and 130 4 tons for 1929. Except for 1929 however the figure for 1930 is higher than any previously recorded, these higher figures are due partly to an increased use of mechanical coal-cutters and partly to concentration of work. During the past few years a large number of collieries have been shut down and the labour absorbed in the remainder. This concentration permits of a proportional reduction of the supervising staff resulting in a larger tonnage per head. There was an increase in the number of deaths by accident from 212 in 1929 to 237 the latter figure is however better than the annual average for the quinquennium 1919 1923, which was 274 and only slightly above the annual average for the quinquennium 1924 1928 which was 218. In addition it relates to a production which is over 3 million tons in excess of the average for 1919 1923 and nearly 1½ million tons in excess of the average for 1924 1928. The death rate was 1 2 per thousand persons employed in 1930 the same as the figure for the previous year, the average figure for the period 1919 1923 was 1 86 and for the period 1924 1928 was 1 16.

IRON ORE

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district

away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelting is on difficulty in obtaining sufficient supplies of ore from deposit that no European Ironmaster

would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the Barakar Iron Works was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal bearing Barakar and Raniganj stages stretches east and west from the works and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate. Singhbhum. Some years ago the Bengal Iron Steel Co., Ltd. secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Nodu Bari and Buda Bari respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. E. W. direction. At Pansira Bari, a portion of Nodu Bari, the deposit has been opened up and now feeds the Barakar ironwork. Pansira Bari rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The upper most 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip to be about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite often lateritized at the outcrop. Cross cuts

into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore including the surface lateritization, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The Tata Iron and Steel Company at Sakoli possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular beds or bodies of hematite, with small proportions of magnetite in close association with granite on the one hand and granitic rocks on the other.

The production of iron ore in India is still steadily on the increase, India is now, in fact the second largest producer in the British Empire, and yields place only to the United Kingdom. Her output is of course still dwarfed by the production in the United States (over 60 million tons) and France (over 40 million tons), her reserves of ore are however not much less than three-quarters of the estimated total in the United States, and there is every hope that India will in the early future take a much more important place among the world's producers of iron ore.

In 1930 however the prevailing depression was reflected in a decrease in the Indian output over the previous year of 23.8 per cent amounting to 578,930 tons. The figures shown against the Keonjhar and Mayurbhanj States in the Table given herewith represent the production by the United Steel Corporation of Asia Ltd and the Tata Iron and Steel Co. Ltd respectively. Of the total production of 1,099,435 tons shown against Singhbhum 391,508 tons were produced by the Tata Iron and Steel Co., Ltd. from their Naomundi mine 241,404 tons by the Bengal Iron Co., Ltd. from their Pansira, Ajita and Madelasa mines, and 447,786 tons by the Indian Iron & Steel Co., Ltd. from their mines at Gua. The remaining 18,737 tons were produced by another firm. The output of iron-ore in Burma is by the Burma Corporation Limited and is used as a flux in lead smelting.

Quantity and value of Iron ore produced in India during the years 1929 and 1930

(a) Estimated

In contrast to the preceding year there was a slight fall in the total output of iron and steel by the Tata Iron & Steel Co., at Jamshedpur. The production of pig-iron fell from 722,980 tons in 1929 to 695,923 tons in 1930 but there were increases in the production of steel (including steel mills) from 410,923 tons in 1929 to 427,035 tons in 1930, and of ferro-manganese from 3,580 tons in 1929 to 4,575 tons in 1930. The production of pig-iron by the Bengal Iron Co. fell from 196,080 tons in 1929 to 108,929 tons in 1930, their output of products made from their pig-iron in 1930 amounted to 3,153 tons of sleepers and chairs, and 34,838 tons of pipes and other castings, against 11,153 tons and 32,445 tons respectively, in 1929. The Indian Iron & Steel Co. decreased their production of pig-iron from 451,059 tons in 1929

to 354,772 tons in 1930. The output of pig-iron by the Mysore Iron Works fell from 21,482 tons in 1929 to 20,668 tons in 1930. The total production of pig-iron in India fell from 1,391,541 tons in 1929 to 1,175,392 tons in 1930.

Exports of Pig-iron.—With the decrease in the production of pig-iron in India recorded above, the quantity exported fell slightly from 548,881 tons in 1929 to 502,629 tons in 1930. Japan is still the principal consumer of Indian pig-iron, but the proportion fell from 70 per cent. of the total exports in 1929 to 40 per cent. in 1930. The United Kingdom and the United States of America both took substantially increased amounts. There was a fall in the export value per ton of pig-iron from Rs 45 7 (53 41) in 1929 to Rs 41 2 (52 06)

MANGANESE ORE.

This industry was started some thirty years ago by quarrying the deposits of the Vinayapatnam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vinayapatnam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The use to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

Record Output in 1927.—Before the year 1926, the record production of manganese in India took place in the year 1907, when 908,291 tons were raised. In 1926 the output rose to 1,014,938 tons, valued at £2,590,357, f.o.b. Indian ports, the rise in output was, however, accompanied by a decrease in value. In 1927 the production rose to the highest yet recorded figure of 1,129,353 tons, accompanied by a rise in value to the peak figure of £2,844,287, f.o.b. Indian ports. During the year 1928, the upward tendency of manganese was not maintained, the output falling to 978,449 tons, valued at £2,811,201 f.o.b. Indian ports. In 1929, the upward tendency was not maintained the output falling to 978,449 tons valued at £2,138,595 f.o.b. Indian ports. In 1929, the output rose again slightly to 984,370 tons, but the value fell heavily to £1,571,080, and in 1930 the output fell substantially to 829,846 tons with a heavy fall in value to £1,300,336. The decrease totalling 164,383 tons, was distributed over all producing districts and states, except Bandur State which showed an increase of some 5,000 tons. One new producer appeared on the scene, namely Bonal State

in Bihar and Orissa, with an initial production of 165 tons.

The continued fall in the price of manganese-ore from 1924 to 1930 is to be correlated with the fact that from 1924 to 1927 the rate of increase of the world's production of manganese-ore was much greater than the rate of increase in the world's production of pig-iron and steel. And although there was a fall in the world's output of manganese-ore in 1929, there was a very large increase in 1930, greater than was justified by the increased production of iron and steel in that year, and it is evident that the world's available supplies of manganese-ore are now much in excess of requirements. Russia, by non-economic methods of exploitation and finance, is able to place large quantities of ore on the market at a price well below both the critical figure of 18 0 pence referred to above and also below any revised figure allowing for the fall in index figures. The large deposits of high-grade manganese-ore discovered near Postmasburg in South Africa are also being developed, and it may be anticipated that eventually South Africa will secure a substantial portion of the world's market. It is not surprising, therefore, that in spite of the apparent prosperity of the Indian manganese industry in 1929 and 1930 as judged from figures of production and export, yet by 1930 the industry as a whole had arrived at a stage of relative depression, causing many operators to cease work.

The present chief sources of production of manganese-ore are now India, Russia, the Gold Coast, and Brazil, whilst substantial supplies of ore are forthcoming from Egypt and Czechoslovakia.

There is a steady consumption of manganese-ore at the works of the three principal Indian iron and steel companies, not only for use in the steel furnaces of the Tata Iron and Steel Company and for the manufacture of ferro-manganese, but also for addition to the blast-furnace charge in the manufacture of pig-iron. The consumption of manganese-ore by the Indian iron and steel industry in 1930 amounted to 46,099 tons, against 47,435 tons in 1929.

Exports, including the quantities exported from Mormugoa in Portuguese India, fell from 964,489 tons in 1929 to 773,026 tons in 1930

GOLD

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,095 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1908. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910, the amount being 2,532 ounces, valued at Rs 1,51,900. Gold mining was carried on in the

North Arcot district of Madras from 1893 till 1900, the highest yield (3,864 ounces) being obtained in the year 1898. The Kyaukpadaung mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myittha, and 216 ounces of gold were obtained in 1904. The amount steadily increased from year to year and reached 3,445 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small, and the gold thus won is used locally for making jewellery.

PETROLEUM

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra Java and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important and the most successful oil fields are found in the Irrawaddy Valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and to 1886, prior to annexation of Upper Burma the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1867. The Yenangyaung field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil-fields of India. Petroleum was struck at the end of 1901 and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fall to 81½ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits but their value is uncertain. About 20 000 gallons were obtained from the eastern Barongo Island near Akroba and about 27,000 gallons from Bami Island in the Kyauppyu district during 1911. Oil was struck at Minbu in 1910, the production for that year being 18 320 gallons

which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse and though some small oil springs have been discovered attempts to develop them have not hitherto been successful.

The world's production of petroleum in 1926 amounted to nearly 150 million tons, of which India contributed 0.72 per cent. In 1927, this figure jumped to some 172 million tons, of which the Indian proportion on a practically stationary production, fell to 0.64 per cent. In 1928, there was another substantial rise in the world's production which reached the figure of over 181 million tons. In 1929 there was another jump to over 202 million tons but in 1930 the world's production fell to about 193½ million tons. The United States alone showed a fall greater than the total fall. Decreases were also shown by Mexico, Peru, Columbia, Argentina, Poland and Japan. But all other producers including India showed an increase in production, the most important increase being shown by Russia, Roumania, and Persia. The United States contributed

65 per cent. Of the world's supply in 1930, Venezuela 9.7 per cent and Russia 5.6 per cent. In 1928, India contributed 0.64 per cent, which fell to 0.60 per cent in 1929 and rose to 0.62 in 1930. Her position on the list of petroleum producing countries fell from 11th in 1929 to 12th in 1930 her place being taken by Trinidad.

Although petroleum statistics indicate that it is becoming more and more difficult to maintain the output of India (including Burma) at the high levels reached in 1919 and 1921, when peak productions of well over 305 million gallons were reached the production thereafter falling to 281,118,909 gallons in 1927, yet the production during 1928 reached the figure of 305,942,711 gallons, in 1929 the figure of 305,142,093 gallons and in 1930 the figure of 311,080,108 gallons, the last totals being the highest ever recorded. The increase in 1930 represents the balance of a very large proportionate increase in the production of Assam to a figure not previously approached, and of a small recovery in the output of Burma, against a very serious fall in the output of the Punjab. This small total increase in output in 1930 was accompanied

by a large decrease in value amounting to Rs. 1,12,25,197 (£ 911,721) or 19 per cent. The increase in output recorded in 1928, 1929 and 1930 to a higher peak, is a reflection of the marked increase in the output of Assam from 1.8 per cent in 1919, to 6.4 per cent. of the total in 1924 and 15 per cent. of the total output in 1930, which has roughly neutralised the fall in the output of Burma during the same period and this year also the heavy fall in the output of the Punjab.

The Yamangyang field of Upper Burma the most highly developed field in the Indian Empire, again shows a small decline in output. In 1924, it succeeded in showing an increase of nearly 64 million gallons, but this temporary arrest in the inevitable decline was more than neutralised by a drop in 1925 of over 21½ million gallons. In 1928, the drop amounted to 14½ million gallons, in 1927 to 5½ million gallons in 1928 to 1½ million gallons, 1929 to one million gallons and in 1930 to 2 million gallons. It is interesting to note that the production in Yamangyang still includes oil derived from the old Burmese hand-dug wells.

Amber, Graphite and Mica—Amber is found in very small quantities in Burma. Graphite is found in small quantities in various places but little progress has been made in mining except in Travancore. The total output in 1929 was 39 tons. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 38 189 cwts compared with 43 650 cwts in 1913. Owing to necessary restrictions with regard to the export of mica the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years.

There was a slight fall in the declared production of mica from 53 231 cwts, valued at Rs 26 50 756 (£ 198 489) in 1929 to 52 727 tons valued at Rs 26 68 986 (£197,708) in 1930. This is the highest production yet recorded with the exception of that of 1918 (54 710 cwts) and 1929. The output figures are incomplete, and a more accurate idea of the size of the industry is to be obtained from the export figures. In the years 1928 and 1929 the quantity exported was more than double the reported production whilst in both the years 1926 and 1927 also the export figure was approximately double the reported production figure. In 1930 the recorded exports were, however, only some 57 per cent in excess of the reported production.

The United States of America and the United Kingdom, which are the principal importers of Indian mica, absorbed 41.7 per cent and 34.6 per cent, respectively, during 1929, and 28.9 per cent and 46.4 per cent during 1930. Germany took 8.8 per cent and 9.4 per cent, respectively, of the total quantities exported during the years 1929 and 1930. The average value of the exported mica increased slightly from Rs 90 5 (£4 7) per cwt in 1929 to Rs 91 5 (£4 8) per cwt in 1930. The exports fell from 116 075 cwts in 1929 valued at £764,092 to 83 909 cwts valued at £69,054. This is the lowest total value recorded since 1923 when the value of the mica exports was £ 689,485.

The difference between exports and production is generally attributed to theft from the mines. If this be the only explanation, we must assume that during the three years prior to 1930 there has been as much mica stolen as won by honest means. Early in 1928 a bill was introduced into the Legislative Council of Bihar and Orissa the purpose of which was an attempt to reduce the losses on this account by licensing miners and dealers; the bill was, however, rejected. In March, 1930, however a similar bill to regulate the possession and transport of and trading in mica was passed and from the figures presented as analysed above it appears that this bill may already have produced a good effect.

Tin, Copper, Silver and Lead—A considerable increase in the production of tin-ore in Burma has again to be reported for 1930, during which the output amounted to 4,270.9 tons valued at Rs 46,54,147 (£387,314) in the preceding year. The decrease in the value per ton is, of course, due to the fall in the price of the metal. This increase in output is mainly

the balance of a very large increase from Mawoh in the Southern Shan States, and a smaller decrease in the output of Mergui. Milling operations were suspended at Mawoh in August 1927 pending the installation of additional plant and further development. Milling was resumed in February 1930 and this explains the large increase. The figure for 1930 includes 1 260 tons from Mawoh, calculated to be the proportion of tin-ore in 2,198 tons of concentrates derived from mixed wolfram-scheelite-cassiterite-ore; these concentrates are assumed to contain 43 per cent of wolfram and 57 per cent of cassiterite. There is no reported output of block tin.

Imports of unwrought tin increased slightly from 55 358 cwts valued at Rs 80,95 974 (£804,177) in 1929 to 30 739 cwts valued at Rs 52 35,676 (£401 764) in 1930, over 96 per cent of these imports came from the Straits Settlements. Wrought tin to the extent of 423 cwts valued at Rs 30 961 (£2,371) was also imported into India during 1930.

In contrast with the increases in the production of silver from the Bawdwin mines of Upper Burma, amounting to 1,400 291 ozs recorded during the previous four years 1925 to 1928, 1929 and 1930 were marked by decrease; amounting to 124 211 ozs and 226 277 ozs respectively. These relatively small decreases in quantity were accompanied by a small fall of value in 1929 and a very marked fall in 1930. The output of silver obtained as a by-product from the Kolar gold mines of Mysore showed a trivial increase.

The production of lead-ore at the Bawdwin mines of Burma increased from 463,972 tons in 1929 to 529,814 tons in 1930 but the total amount of metal extracted decreased, from 30 233 tons of lead (including 1 900 tons of antimonial lead) valued at Rs 2 60 00,613 (£1,885 717) in 1929 to 79 780 tons (including 1 700 tons of antimonial lead) valued at Rs 1,85,04 6 6, (£1 370 712). The quantity of silver extracted from the Bawdwin ores fell from 7 280 517 ozs valued at Rs 1 07 81,482 (£800 657) in 1929 to 7 064 206 ozs valued at Rs 78,87 074 (£569,457) in 1930. The value of the lead per ton fell from Rs 311 6 (£33 2) in 1929 to Rs 232 1 (£17 2) in 1930 whilst the value of the silver fell from Rs 1 7 7 (26 408) per oz. in 1929 to Rs 1 5 1 (19 374) in 1930. The ore reserves in the Bawdwin mines, as calculated at the end of June 1930, totalled 4 265 665 tons (against 4 140 999 tons at the end of June 1929) with an average composition of 25.5 per cent., of lead, 15.3 per cent., of zinc, 0.68 per cent of copper, and 20.4 ozs silver per ton of lead. Included in this reserve are 223,000 tons of copper-ore.

Zinc—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1918. The production of zinc concentrates by the Burma Corporation Limited, in the Northern Shan States fell from 68,435 tons valued at Rs 54,80,084 (£408,958) in 1929 to 57 620 tons valued at Rs 25 73,309 (£190,516) in 1930. The heavy fall in value per ton reflects the world-wide depression. The exports during 1930 amounted

to 64,800 tons valued at Rs 64,80 075 (£480,005) against 67,408 tons valued at Rs 68,00,980 (£507,582) in the preceding year

Gem Stones—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline, garnet, rock-crystal, agate, cornelian, jadeite and amber. The production of diamonds in Central India fell from 1 027 3 carats valued at Rs 1,27,101 (£9,485) in 1929 to 1,321 2 carats valued at Rs 72,533 (£5,372). Of this latter production 1,197 3 carats were produced in Panna State and the remainder in Charkhari, Ajaigarh and Biljaur.

A severe decline in the output from the Mogok ruby mines of Upper Burma in 1924, followed in 1925 by a marked drop in value, bore witness to a serious decline in the industry. The Burma Ruby Mines, Limited ultimately decided to go into liquidation, and the mines were offered for sale in September 1928. The skeleton organisation left in charge of the mines, however, made good use of its opportunities with the result that the value of the output in 1928 exceeded that of the previous year by over a lakh of rupees. This encouraging result was effected by a rigorous economy and an extension

of a system of co-operation with local miners, and was assisted by some good finds of sapphires in the Kyauingwin mine—the only one still worked by European methods.

During 1927, however, production fell in value by over 1½ lakhs of rupees, due mainly to a decrease in the value of the sapphires and spinels produced there having been a slight increase in the value of the rubies. During 1928, there was another very large decline in value, amounting to over a lakh of rupees, due to a severe drop in the value of the sapphires produced as before, there was a slight increase in the value of the rubies. The value of the 1929 production was slightly above that of 1928, due to a considerable increase in the value of the rubies found, largely balanced by another large fall in the value of sapphires produced. In 1930 there was a further substantial fall in production and in total value though the value per carat of the sapphires produced is the highest recorded for many years. Judging from reports in the *Rangoon Times* this is due to the opening up by the Burma Ruby Mines Ltd. of the new Pagoda mine at Kathe leading to the find of a fine sapphire of 630 carats and a star sapphire of 293 carats. The find of a ruby of 100 carats was also reported.

SALT

There was a slight increase in 1930 in the total output of salt amounting to some 2 000 tons a very substantial increase of 128,202 tons from Aden, with a small increase from Bombay and Sind, being largely neutralised by substantial falls in the output of Madras (79 462 tons) and Northern India (80 395) and a slight fall in Burma. Imports of salt into India increased substantially by 81,000 tons, the major portion of the increase being due to Italian, East Africa, with smaller increases from Germany, Egypt and Spain. Decreases were shown by the United Kingdom and Aden.

Bibliography—Report of the Chief Inspector of Mines in India, under the Indian Mines Act (VIII of 1901) for 1930, by the Chief Inspector of Mines Report on the Mineral Production of India during 1929 by L. Leigh Farmer, Officiating Director, Geological Survey of India. Note on the Mineral

Production of Burma in 1928 Monographs on Mineral Resources published by the Imperial Institute Quinquennial Review of the Mineral Production of India for the years 1924-1928 (Records of the Geological Survey of India, Vol LXIV)

Stock Exchanges.

There are about 446 Share and Stock Brokers in Bombay. They carry on business on the Brokers Hall, bought in 1899 from the funds of the Share and Stock Brokers Association formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to fix the rates in times of emergencies. The official address of the "secretary" is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased and it was recently sold by public auction for Rs. 21,900. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were

employed to purchase an adjoining building for the extension of the business. This building was pulled down and the extension was completed last year. The present value of the card is about Rs. 7,000. The rules of the Association were revised in October 1916 and from the New Year the purchaser of shares has to pay the stamp and transfer fee instead of the seller.

There are two classes of Exchange Brokers—Europeans and Indians, the latter being certified for recognition by the native Stock Exchange Business in Government Paper and all other Trustees' Authorized Securities is carried on under the rules of the Bombay Stock Exchange, but in the street outside the hall.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street, known as the *Bombay Stock*

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta Madras and other important centres, with a membership both European and Indian but along with these have sprung up in recent years certain associations such as the Bombay Indian Merchants Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an 'East India Section' of their organization. The Indian Chambers work harmoniously with this body but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them and on various occasions the London Chamber or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazlulhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazlulhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. Sir (now the Hon. Sir) D. M. Wacha, President of the Bombay Indian Merchants Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazlulhoy Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to

take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress —

I. The name of the Chamber will be 'THE ASSOCIATED INDIAN CHAMBER OF COMMERCE'

II. The Registered Office of the Chamber will be in Bombay

III. The objects for which the Chamber is established are —

- (1) To discuss and consider questions concerning and affecting trade, commerce, manufactures and the shipping interests at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial manufacturing and shipping interests of the country
- (2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity
- (3) To organize Chambers of Commerce, Commercial Associations or Bodies in different trade centres of the Country
- (4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber

The Articles of Association provided "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and semi-annual or special meetings may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary.

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1925 at Delhi and 1927 at Calcutta, the initiative in the new activities falling like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927 decided upon the formation of a Federation of Indian Chambers of Commerce and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located." Among the objects for which the Federation is established are the following —

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures finance and all other economic subjects.

- (b) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business
- (c) To enter into any arrangement with any Government or authority supreme municipal local or otherwise that may seem conducive to the Federation of objects or any of them and to obtain from any such Government or authority all rights concessions and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights privileges and concessions
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares debentures or securities of any other company having objects altogether or in part similar to those of this Federation
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation
- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise
- (g) To draw make accept discount, execute and issue bills of exchange promissory notes, bills of lading warrants debentures and other negotiable or transferable instruments or securities

The Rules provide for two classes of members viz., numbers consisting of Chambers of Com-

merce (Subscription Rs 300) and others consisting of Commercial Associations (Subscription Rs 150)

The following are the Committee of the Federation for 1932 —

President — Mr. Walechand Hirachand

Vice-President — Mr. Nalini Ranjan Sarkar

Members of the Executive Committee — Mr. G. D. Hiria (Indian Chamber of Commerce Calcutta) Sir Purshotamdas Thakurdas, Kt. C.I.E. Das, M.A. (Bihar & Orissa Chamber of Commerce Patna) Mr. Kasturbhai Lalbhai (Ahmedabad Millowners Association Ahmedabad) Mr. M. J. Dahanukar (Maharashtra Chamber of Commerce, Bombay) Mr. Fakirjee Cowasjee (Butters & Shippers Chamber, Karachi) Mr. R. K. Shammukham Chetty M.L.A. (Indian Chamber of Commerce Coimbatore) Mr. H. C. Srinivasulu A. Laljee (The Indian Salt Association Bombay) Mr. K. Mohamed Ismail Saib (Southern India Skin & Hide Merchants Association Madras) Mr. J. O. Ghose (Indian Tea Planters Association Jalpaiguri)

Honorary Treasurers — Mr. D. P. Khaitan (Indian Chamber of Commerce, Calcutta) Mr. B. L. Nopany (Jute Balers Association Calcutta)

Co-opted Members — Mr. M. A. Master, Bombay Sir Chunilal V. Mehta, F.C.S.I., Bombay Mr. A. L. Ojha Calcutta Mr. H. P. Bagaria, Calcutta. Lala Padumant Singhania, Cawnpore It. P. S. Sodhanbas, Lahore

Secretary — Mr. D. G. Mulherkar

Office Address — Phoenix Building Ballard Estate, Bombay

Telegraphic Address — Unconnected

BENGAL

The Bengal Chamber of Commerce was founded in 1884. Its headquarters are in Calcutta. Other societies connected with the trade and commerce of the city are the Royal Exchange the Bengal Bonded Warehouse Association the Calcutta Trades Association, the Bengal National Chamber of Commerce and the Marwari Chamber of Commerce. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associated) and Honorary

Merchants bankers, shipowners, representatives of commercial railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture mining or manufacture, and persons engaged in or

connected with art, science or literature may be elected as permanent members of the Chamber

The following are the office bearers of the Chamber for the year 1931-32 —

President — Mr. H. O. Bonthall (Messrs. Bird & Co)

Vice-President — Mr. J. Min Austin, M.L.C. (Jardine Skinner & Co)

Committee — Mr. H. H. Burn M.L.C. (McLeod & Co) Mr. R. D. Gompertz (Mercantile Bank of India Ltd) Mr. S. D. Gladstone (Gladstone Wyllie & Co) Mr. J. B. Henderson (Blackman Mackenzie & Co) Mr. V. B. D. Jureid (Bengal-Nagpur Railway) Mr. D. J. Lockie (James Finlay & Co Ltd) Mr. Richard Smith M.L.A. (Burmah-Shell Oil Storage & Distributing Co of India Ltd)

The Secretary of the Chamber is Mr. D. K. Cunlison. Assistant Secretary, Mr. A. O. Daniel

The following are the public bodies (among others) to which the Chamber has the right of

*returning representatives and the representatives returned for the current year
The Council of State—The Hon'ble Mr F C Benthall

The Bengal Legislative Council—Mr Henry Birkenhead (Birkenhead & Co), Mr H H Burn (McLeod & Co), Mr G W Leeson (MacNeill & Co), Mr John Austin (Jardine Skinner & Co), Mr W H Thompson (Bengal Telegraph), Mr W C Worlsworth (Statesmen)

The Calcutta Port Trust—Mr J P Cunningham (Turner Morrison & Co Ltd), Mr B D Gladstone (Gladstones Arbitrator & Co), Mr J S Henderson (Mackinnon Mackenzie & Co, Ltd), Mr G W Leeson (McNeill & Co), Mr K J Nicolson (Gladstone Wyllie & Co), Mr J Hold Kay, (James Finlay & Co, Ltd)

The Calcutta Municipal Corporation—Mr N C Bilton (Bengal Telephone Co Ltd), Mr J Campbell Forrester MLC (Mr A C (Hillhill) (Bumrah-Shill), Mr N D Harris (Imperial Chemical Industries Co Ltd), Mr H A Jule (W Haworth & Co), Mr J Selmer Bowman (Englishman Ltd)

The Board of Trustees for the Improvement of Calcutta—Mr W H Thompson MLC (Bengal Telephone Co Ltd)

The Bengal Boiler Commission—Mr H Cow (Burn & Co Ltd), Mr H H Reynolds MLC (Ind), MIRE, Mr J Williamson, MLC (Ind), MIRE

The Bengal Smoke Nuisances Commission—Mr C A John Hendry FRCS (Martin & Co), M J STREET, MLC, MIRE, MLC (Ind), MIRE, Mr G Y Robertson

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors Home and to numerous subsidiary associations. The following are the recognized associations of the Bengal Chamber of Commerce—
 Calcutta Wheat and Seed Trade Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders' Association, Calcutta Fire Insurance Association, Calcutta Import Trade Association, Calcutta Marine Insurance Association. The

Wine Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers Association, Indian Engineering Association, Calcutta Jute Fabrica Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers Association, Baled Jute Shippers' Association, Calcutta Jute Dealers' Association, Calcutta Hides and Skins Shippers' Association, Calcutta Sugar Importers' Association, and Calcutta Accident Insurance Association.

The Chamber maintains a Tribunal of Arbitration for the determination settlement and adjustment of disputes and differences relating to trade business, manufactures, and to customs of trade, between parties all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or else where in India or Burma, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may, from time to time annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measurers Department controlled by a special committee. It includes a Superintendent (Mr R. Ellis), Head Office Manager (Mr O G Smith) and six Assistant Superintendents (Messrs J G Smyth, A H Mathews, G O G Smyth and C C H. Bowden, J B Y Hentrey and R. Perry, and the staff at the time of the last official returns consisted of 100 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Press Current* and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other journals on matters under discussion.

INDIAN CHAMBER OF COMMERCE, CALCUTTA

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade commerce and industries in or with which Indians are engaged or concerned, to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians, to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons in particular the Indians engaged in trade, commerce or industries in India to adjust controversies between members of this Chamber to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to

abide by the judgment and decision of the Tribunal of the Chamber, to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India, to provide regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of Members local and non-local. The local Members pay an annual subscription of Rs. 100 and the Non-local Mem

bers Rs 50 Merchants, Bankers, Ship owners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1932 —

President—Mr Sheokhisen Bhattar

Senior Vice-President—Mr A I Ojha

Vice-President—Mr R J Nopany

Members—Mr C D Birla Mr D P Khaitan

Mr Anandji Haridas Mr G J Mehta

Mr R J Purohit Mr N J Puri Mr W

C Banerjee Mr Mohanlal Lalimbhai Mr

J R K Modi Mr Kanallal Jatin Mr

Salatulla Gangjee, Mr C M Ramswami

Mr J P Dutta Mr Habib Mohamed

and Dr A Sanval

Secretary—Mr M P Gandhi M A F F F S

F F S

The following Associations are affiliated with the Chamber—Indian Sugar Mills Association, Jute Balers Association, Indian Produce Association, Pearl India Jute Association, Indian Merchants Association, Calcutta Jute Merchants Association, Calcutta Krumm Association, Bengal Jute Dealers Association, Gunny Traders Association and Shareholders Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various trades. With a view to cover the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades—(1) Jute (2) Gunny, (3) Piece-goods and Yarn (4) Iron and Steel, (5) Coal and Minerals (6) General.

Honorary Treasurer—Mr R. L. Nopany
Honorary Secretary—Mr J K Mehta, M. A.
Office Address—"The Recluse", 51, Murlidhar Road, Fort, Bombay 1.

BOMBAY

The object and duties of the Bombay Chamber as set forth in their Memorandum and Articles of Association, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect the general mercantile interests of this Presidency to collect and classify information on all matters of general commercial interest, to obtain the removal, as far as such a Society can of all acknowledged grievances affecting merchants as a body, or mercantile interests in general to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means as the Committee for the time being may think fit, assisting to form a code of precedents for simplifying and facilitating business to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests, and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1886, under the auspices of Sir Robert Grant who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 179. Of these numbers 19 represent banking institutions, 13 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 11 insurance companies, 15 engineers and contractors, 127 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs 800. Gentlemen distinguished for public services, or eminent in commerce and manufactures, may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-Presidents and seven members. The committee meet, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber a special meeting at any time, for specific purpose.

The Chamber elects representatives as follows to various public bodies—

The Council of State—one representative
Legislative Council of the Governor of Bombay two representatives.

Bombay Municipal Corporation, one member elected for three years.

Bombay Improvements Committee, one member, elected for two years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Three statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloth, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants.

The "Weekly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tomes in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 10, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. The measurements are in attendance on the quays whenever there are goods to be measured and during the busy

season are on duty early and late. The certificates granted show the following details—

- (a) The date, hour and place of measurement.
- (b) The name of the shipper,
- (c) the name of the vessel,
- (d) the port of destination,
- (e) the number and description of packages
- (f) the marks,
- (g) the measurement, and in the case of goods shipped by boats;
- (h) the registered number of the boat,
- (i) the name of the tidal.

Certificates of weight and of origin are also issued by the Chamber.

Associated Chamber of Commerce of India

HEAD OFFICE LOCATED IN CALCUTTA FOR 1933
President, The Hon. Sir E. O. Bantall

Millowners' Association, Bombay

The Millowners' Association, Bombay was established in 1875 and its objects are as follows—

Milowners Mutual Insurance Association, Ltd

The Milowners Mutual Insurance Association, Ltd was registered on 30th June 1924 as a Company limited by guarantee. The registered office of the Association is located in Patel House, Chhatrapati Street, Fort Bombay.

The objects of the Association are—

(a) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents fatal or otherwise, arising out of and in the course of their employment, (b) the insurance of members of the Company against loss or damage by or incidental to fire, lightning etc., and (c) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counterinsurances and counter guarantees, etc. etc.

The Association consisted of 59 members on 1st October, 1932.

All members of the Milowners Association are eligible for admission to the Mutual Company. Non members are also eligible for membership of the Mutual, provided their application is approved by the Committee of the Milowners Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are—

Mr A Geddis (Chairman).

The Hon'ble Sir Munrobandas Ramji Kt, Sir Ness Wadia, Kt, C.I.E., Sir Joseph Kay, Kt., Mahant D Morari, Esq. Sir Caxaro Wadia, Kt, C.I.E., S D Saklatvala, Esq., F Stone, Esq., O.B.E., and E K. Mantri, Esq., B.A., Barrister-at-Law, Secretary of the Association.

Indian Merchants' Chamber

The Indian Merchants Chamber was established in the year 1907. Its objects are—

(a) To encourage friendly feeling and an amity among business community on all subjects connected with the common good of Indian merchants

(b) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly

(c) To promote the objects of the Indian business community in matters of inland and foreign trade shipping and transport, industry and manufacture banking and insurance

(d) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber and to make efforts for the spread of commercial and economic knowledge

(e) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the interests of the Chamber or any Department thereof or by any local body or bodies and in general to take the initiative to secure the welfare of the business community in all respects

(f) To make representations to Local, Central or Imperial authorities Executive or Legislative on any matter affecting trade commerce, manufacture or shipping banking or insurance

(g) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport and to secure the services of expert tribunals and other men to that end if necessary or desirable

(h) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes

(i) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade commerce or manufacture or incidental to the attainment of the above objects

(j) To secure the interests and well being of the Indian business communities abroad

(k) To secure, wherever possible, organised and co-ordinated action on all subjects involving the interests of members including regulating conditions of employment of industrial labour in various industries represented by the members of the Organisation

- (iv) To nominate delegates and advisers etc. to represent the employers of India at the Annual International Labour Conference of the League of Nations
- (viii) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference
- (ix) To take all steps which may be necessary for promoting supporting or opposing recommendations or conventions of the International Labour Conference

(f) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly

There are three classes of members —

(1) Ordinary, (2) Patrons and (3) Honorary

(1) There are three classes of ordinary members —

(a) Residents of Bombay and its suburbs who will have to pay Rs 75 as annual subscription, but joint stock companies will have to pay Rs 100 per year

 Secretary — Mr Uttamram Ambaram M.A., LL.B.

The address of the Association is 262, Maalid Bunder Road, Mandvi Fort, Bombay.

MAHARASHTRA CHAMBER OF COMMERCE

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the City of Bombay, Bombay Suburban District, Poona, Sholapur, Satara, Ratnagiri, Kolaba,

Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and Indian States adjoining these districts.

President — Mr Walchand Hirchand

Vice-Presidents — Mr Hanumantran Ramnath, Mr B. Laxman Vishwanath Pophale, Mr M. L. Dahanukar

Secretary — Mr D. V. Kelkar, M.A.

The offices of the Chamber are in the Phoenix Building, Graham Road, Ballard Estate, Bombay.

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon "any gentleman interested in the affairs and objects of the Chamber." All new members joining the Chamber pay Rs 750 entrance fee and the monthly subscription is Rs 18. The subscription to the Chamber's periodical returns is at present fixed at Rs 7-8-0 per month. The affairs of the Chamber are managed by a committee of ten members consisting of a Chairman, Vice-Chairman and eight members elected at the annual general meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Bombay Legislative Council, four representatives on the Karachi Port Trust, two on the Karachi Municipality and two on the North Western Railway Advisory Committee Karachi. There were 66 members of the Chamber in January 1933. The following were the officers in 1932—

Chairman—Mr G. H. Rasthor (Forbes Forbes Campbell & Co, Ltd.)

Vice-Chairman—Mr H. S. Begg Withers O.B.E. (Burnah Shell Oil Storage & Distributing Co of India, Ltd.)

Members of Committee—Mr J. W. Anderson (Graham & Iasing Co (India) Ltd.), Mr W. S. Cartledge (Bombay Co, Ltd.), Mr E. S. Hawkins O.B.E. (North Western Railway), Mr F. A. Johnson (National Bank of India Ltd.), Mr A. S. Mierlsch (Kall Brothers Ltd.), Mr W. Beld (David Sassoon & Co Ltd.), Mr L. J. Lamton (Markinson Mackenzie & Co), Mr C. Voegel, (Volkart Brothers)

Representatives on the Bombay Legislative Council—Mr J. Humphrey, O.B.E.

Representatives on the Karachi Port Trust—Messrs U. S. Tawton, W. D. Young, G. H. Rashid, A. S. Mierlsch O.B.E.

Representatives on the Karachi Municipality—Mr L. V. Walker and Mr B. Sumner

Representatives on the North Western Railway Local Advisory Committee Karachi—Messrs G. H. Rasthor and W. B. Bissack

Ag. Secretary—Mr H. M. Gomas

Ag. Public Measurer—Mr J. G. Smith

The following are the principal ways in which the Chamber gives special assistance to members—The Committee takes into consideration and gives an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertakes to nominate arbitrators and surveyors for the settlement of disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which either of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton wool, hides and other merchandise arriving at or leaving the port.

MADRAS

The Madras Chamber of Commerce was founded in 1835. All merchants and other persons engaged or interested in the general trade commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per-pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their power-of-attorney as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership is by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs 100 provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscriptions shall not exceed Rs. 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chamber's finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is that no trade mark or ticket shall be registered on behalf of an Indian firm trading under a European name.

The following publications are issued by the Chamber—Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 58 members and 4 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows—

Chairman—Mr K. Kay

Vice-Chairman—Mr F. Birley M.L.C.

Committee—Mr G. N. Lawrence, Mr G. L. Orchard, Mr D. B. Scott, Mr W. O. Wright. The following are bodies to which the Chamber is entitled to elect representatives and the representatives elected for the year—

Madras Legislative Council—Mr F. Birley, M.L.C.

Madras Port Trust—Messrs G. A. Bambridge, E. D. Dennigton, D. M. Reid and W. O. Wright.

Corporation of Madras—Messrs D. M. Reid, A. W. Hutton and F. H. James, M.L.C.

Federation of Chambers of Commerce of the British Empire—Sir Gordon Fraser Secretary G. Gompertz.

SOUTHERN INDIA.

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies concerning the promotion of trade especially in the Madras Presidency and the interests of members. Special objects are stated to be —

To maintain a Library of books and publications of commercial interest so as to diffuse commercial information and knowledge amongst its members.

To establish Museums of commercial products or organise exhibitions either on behalf of the Chamber or in co-operation with others.

There are two classes of members permanent and honorary. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain and the Indian National Committee of the International Chamber of Commerce Paris.

The Chamber registers trade marks, holds survey and arbitrations and issues certificates of origin.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act 1915. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the right of electing a representative to that body.

Under the Madras City Municipal Act, 1919 the Chamber has the right of electing two Councillors to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Road Board, the Town Planning Trust, the Provincial Cotton Committee, Visagapatnam Harbour Works Committee, the Advisory Committee of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Government Institute of Commerce Advisory Council, Madras, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, Governing Body of the Training Ship Dufferin, Advisory Committees of the Government Rayapattanam and Ophthalmic Hospital and Madras Electric Supply and Tramways Advisory Committee, Income Tax Board of Referees and Indian Institute of Accountants.

The Chamber has 422 members on the roll and has its own building. Several Associations in the City of Madras and Chambers of Commerce Upcountry have been affiliated to this Chamber.

President — Mr Jamal Mahomed Saib, M.L.A.

Vice-Presidents — Dewan Bahadur Govindas Chathoorbhujadas and Mr C. Gopal Menon.

Honorary Secretaries — Yusuf Saib and V. K. Chetty.

Assistant Secretary — F. R. Nair, B.A., B.Com.

UPPER INDIA

The Upper India Chamber of Commerce is concerned with trade commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows—A firm company or association having its place of business in Cawnpore, Rs. 500 a year, an individual member resident or carrying on business in Cawnpore Rs. 500 firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints arbitration Tribunals for the settlement and adjustment of disputes when invited, to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 64 members, two honorary members and seven affiliated members.

The following are the officers—

Upper India Chamber of Commerce Committee—*President* Mr A. I. Calverley, (The British India Corporation Ltd.) *Vice President*—Mr T. Gavlin Jones (The Cawnpore Chemical Works Ltd.) *Members*—Mr T. J. Gray (Messrs B. C. Sutherland & Co. Ltd.) Mr G. A. Lewis (The British India Corporation Ltd.) Mr K. C. Nicoll (The National Bank of India Ltd.) Mr Rami Varma (Cawnpore) Mr K. I. D. Price (The Mulr Mills Co. Ltd.) Mr J. Harker (The British India Corporation Ltd.) Mr Jung Bahadur Mirhousa (Messrs Munna Lal & Sons) and Mr P. G. Moore, (Messrs B. C. Sutherland & Co. Ltd.) *Representatives on the United Provinces Legislative Council*—Mr E. M. Souter M.L.C. (Messrs Ford & Macdonald Ltd.) The Hon. Mr P. V. S. Vastava M.S.C. Cawnpore.

Secretary—Mr J. G. Ryan M.B.E., V.D.
Head Clerk—Babu L. N. Ghosal

PUNJAB.

The Punjab Chamber of Commerce has its head quarters at Delhi and exists for the care of mercantile interests on the usual lines in the Punjab the North West Frontier Province and Kashmir. The Chamber has Branches at Amritsar and Lahore. Membership is by ballot and is restricted to Banks, Merchants (wholesale), Railways and proprietors of large industrial interests. The entrance fee is Rs. 100 and the rate of subscription Rs. 150 per year. The Chamber returns one member to a seat on the Reformed Punjab Legislative Council jointly with the Punjab Trades Association, and shares representation in the Indian Legislative Assembly with other Chambers which are members of the Associated Chambers of Commerce of India and Ceylon. In the seat allotted to the Associated Chambers the Chamber is a member of the Federation of Chambers of Commerce, London. The Chamber is represented on the Municipal Corporation of Delhi as well as on the N. W. Railway Advisory Committee, Lahore.

iliary Forces Act, 1920—*J R Fairley Esq

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October 1888.

The following are the members of the Chamber which has its headquarters at Cocanada, the chief port on the Coronandel Coast north of Madras —

*Members—*The Garamandel Co Ltd Ripley & Co Innes & Co Wilson & Co Gordon Woodroffs & Co (Yardra) Ltd Northern Cereals Development Co and Burnmah Shell Oil Storage and Distributing Co of India, Ltd

MEMBERS OF THE COMMITTEE

Mr S A Chreeman (*Chairman*)

" S Reilly

C D T Shorrs

, G M Lake (*Secretary*)

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent Agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam and Ganjam and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Coca-

nada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs 16 must accompany the reference with Rs 5 from a non member and Rs 1 from a member as payment for the Chamber's Seated Certificate.

The Committee consisting of 3 members including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs 100 and for each member whose place of business is elsewhere is Rs 50. The subscription for each member whose place of business is in Cocanada is Rs 120 per annum, payable quarterly and for each member whose place of business is elsewhere is Rs 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the Last Thursday.

A Fortnightly Circular of current rates of produce, freights and exchange is drawn up by the Committee.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Connaught House Street, Calcutta, the headquarters of the Director-General. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (b) the compilation and publication of All-India statistics. Among the important publications for which the Director-General is

responsible are the following annual volumes: Review of the Trade of India, Statement of the Foreign Sea-borne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly Journal—The Indian Trade Journal—the principal features of which are: (a) Information as to tariff changes in foreign countries which affect Indian interests (b) notices of tenders called for and contracts

placed by Government departments and public bodies, (e) crop reports and forecasts, (f) Government orders, communications and other notifications affecting trade, (g) analysis of Indian trade statistics, (h) market reports, prices and trade movements of the staple exports and imports, (i) trade enquiries for securing trade introductions, (A) summaries of the leading features of consular and other trade reports, and (f) abstracts of the proceedings of the various Chambers of Commerce in India.

The Department also administers the **COMMERCIAL LIBRARY AND READING ROOM** located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library

and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 13,291 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 400 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London and Hamburg with His Majesty's Trade Commissioners in India and the Dominions and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA

The British Trade Commissioners in India are part of the world wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world by disseminating it to British manufacturers and exporters, by undertaking such special constructive activities as may be found possible and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world, who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Sir (then Mr.) Thomas H. Ainscough C.M.G. was appointed His Majesty's Senior Trade Commissioner in India in January 1918 and opened an office in Calcutta in March of that year. For five years, owing to the pressing need for economy in the Public Service, he was singlehanded in covering this vast territory. In 1923, however, H.M.'s Government sanctioned the opening of an office in Bombay and the creation of an additional Trade Commissioner's post in Calcutta. Mr. W. D. M. Clark holds the appointment of H.M.'s Trade Commissioner at Bombay and in 1930

Mr. R. B. Willmot was appointed as H.M.'s Trade Commissioner at Calcutta. The territory is now divided between the Calcutta and Bombay posts and this development allows the Senior Officer to travel almost continuously to any part of India which may call for his attention and to devote his time to some of the broader political economic problems which are becoming so important in view of the changing political conditions in India.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is therefore enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area, to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers, to visit the principal commercial centres, to report upon foreign competition on financial and trade conditions, and new legislation affecting trade to make an annual general report on the conditions and prospects of trade in his area, and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department, to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges through out the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local exporters and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

For many years British traders have deplored the fact that there have not been available officials with commercial experience who could help them in solving their difficulties and in meeting foreign competition. As a rule these complaints elicited the Consuls of other countries and invited the attention of Government to their many virtues. In response to this agitation the greatest care has been taken by the British Government to select, as their trade officers Overseas, men of sound commercial training and experience who have acquired some reputation in their respective spheres, and a comprehensive and businesslike organization has been built up at the Department of Overseas

Trade London, to deal with the information sent home. It now rests with the British mercantile community both at home and also Overseas, to co-operate freely and frankly with the Trade Commissioners and to recognize the work they are doing in the Imperial interest by assisting them with such information and particulars with regard to foreign competing goods conditions of trade, etc., as they are able to afford.

THE INDIAN CENTRAL COTTON COMMITTEE

The Indian Cotton Committee of 1917-18, a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922 reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommendations was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton growing industry generally to advise the Government of India and Local Governments in regard to matters of cotton policy especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921 and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton.

The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows:—

President, Ex Officio—Dewan Bahadur Sir T. Vijayaraghavacharya K.C.S.I. Vice-Chairman, Imperial Council of Agricultural Research, Simla or Delhi.

The Expert Adviser to the Imperial Council of Agricultural Research in Agricultural matters Simla or Delhi ex officio

Representing the Agricultural Department, Madras—S. V. Ramamurthy Esq., I.C.S., Director of Agriculture

Representing the Agricultural Department, Bombay Presidency—The Director of Agriculture Bombay Presidency, Poona

Representing the Agricultural Department U.P.—
P B Richards, Esq., I.A.S. Entomologist to
Government, United Provinces, Cawnpore

*Representing the Agricultural Department
Punjab*—The Director of Agriculture, Punjab
Lahore

Representing the Agricultural Department, C.P.—

Publicity Officer—Mr R.D. Mehta M.A. Agri. (Oxon) Post Grad. Div. Agri. (Oxon) Post Grad. Res. U. I.I.T. (Oxon)

Office—Valcan House, Nicol Road Ballard Estate, Bombay

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes were reducing the returns of the grower and causing great economic loss to the country at large

The Cotton Transport Act passed in 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and of the Baroda, Rajputana, Chhota Udepur and Hyderabad States and with excellent results

More recently the Cotton Ginning and Pressing Factories Act (XII of 1925) has been passed which provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses and should lead to a very marked improvement in the quality of Indian cottons.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade both in India and abroad those improved varieties which have now reached a commercial scale and has carried out some important en-

quiries into the financing of the cotton crop up-country and primary cotton marketing. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of about 1 staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Cotton trade and of the cotton-growing industry thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution

Research Studentships—The Committee has also instituted a scheme of research studentships to enable distinguished graduates of Indian Universities to undertake research on cotton problems under the direction of experienced research workers in India. Six to eight such studentships are awarded every year

Statistics—By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to the raw cotton received and of raw cotton consumed in the spinning mills in the British provinces and in the States of Hyderabad, Mysore, Baroda, Gwalior and Indore the establishment of statistical returns relating to the number of bales of raw cotton pressed weekly in every Province and many of the Indian States and the revival of the rail home trade returns of cotton for trade blocks are some of the results already achieved by the Committee in this direction

Research—By means of the Cotton Cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped technological laboratory which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the stand point of the grower

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied

In addition by means of grants-in-aid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton-growing provinces and now number twenty two

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work

THE EAST INDIA COTTON ASSOCIATION, LIMITED

Bombay—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies viz. The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange Ltd., The Bombay Millowners Association, The Bombay Cotton Brokers Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants and Mercadants Association Ltd. and The Japanese Cotton Shippers Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool was badly felt especially when speculation was rife in futures which was so excessive in 1913 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wilson. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act under which the Board worked was repealed and its functions were carried on by the East India Cotton Association under Bombay Act No. XLV of 1922.

The Association continued to function under the above Act until 31st October 1932. With effect from 1st November 1932 the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as follows:—

Haridas Madhavdas Esq. (President) S. K. S. Panel, Ahmedk. Chinnibhai Esq. (Vice-President) Bayers Panel C. P. J. Panel Esq. H. P. M. Esq. M. D. Panel Esq. S. K. S. Panel, Purihotam Jivandas Esq. Mahomedali Habib Esq. Jananadas Ramdas Esq. Brokers Panel Esq. J. J. Esq. Jagjivan D. Panel Esq. Amritlal I. Khokhani Esq. Jananadas Adhika Esq. P. N. Panel Esq. Prataprai M. Mehta Esq. Officers

D. Mehta, Esq., B.A. Secretary, C. M. Parikh Esq. B. Com. Assistant Secretary, A. R. Menezes, Esq. Manager, Clearing House

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Exchange, to provide forms of contracts compulsory or prescriptive and regulate the making, carrying out and enforcement or cancellation of contracts to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade to establish just and equitable principles in the said Trade to maintain uniformity of control of the said Trade to fix or adopt standards of classification of cotton, to acquire preserve and disseminate useful information connected with the Cotton Interest throughout all markets, to decrease or insure the local risk attendant upon business, and generally to control promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the use thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton from India and the importation of Cotton into India in so far as it may be imported. To bring, prosecute or defend, or aid in bringing, prosecuting or defending any suits, actions proceedings, applications or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association, and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Exchange Building at Sewri Cotton Depot, containing 121 Buyers Rooms and 84 Sellers Rooms and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson Governor of Bombay, on the 1st December 1925 in the presence of a large gathering which included most of the prominent business men of the City and many leading citizens.

There is a membership of 411 members.

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price and

induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the 'Share Mania,' and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £95 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1931-32, the total area in all territories reported on was computed at 21,622,000 acres and the total estimated output was 4,014,000 bales of 400 lbs. as compared with 3,872,000 acres and 5,224,000 bales in 1930-31.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the output. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop —

Provinces and States	1931-32 (Provisional Estimates)	
	Acres in Thousands	Bales of 400 lbs. (In thousands)
Bombay (a)	6.14	1,900
Central Provinces and Bihar	4.088	184
Punjab (a)	2,547	618
Madras (a)	256	428
United Provinces (a)	786	218
Burma	2.8	34
Bengal (a)	7.0	17
Bihar and Orissa (b)	68	14
Assam	87	15
Ajmer Merwara	27	11
North-West Frontier Province	18	4
Delhi	4	2
Hyderabad	7,644	508(r)
Central India	1,187	128
Baroda	604	136
Gwalior	632	76
Rajputana	438	61
Mysore	83	9
Total	23,522	4,064

(a) Including Indian States

Note — A bale contains 400 lbs. of cleaned cotton

(b) Excluding certain feudatory states which report an area of 29,000 acres as against 30,109 acres last year. The yield is estimated at 7,000 bales which is practically the same as in last year.

(c) Calculated on the new basis adopted this year.

EXPORTS OF RAW COTTON FROM INDIA
(In thousands of bales of 400 lbs.) to various Countries for year ending 31st March —

Bombay is the great centre of the cotton trade. The principal varieties are Dhollera, Brooch, Gomras (from the Benars), Dharwar and Coomra Brooch is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengale is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coomra, Colabators and Tinnevely. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Governments have also been active in improving the class of cotton produced, by seed selection, hybridisation and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to lighten the

whole output, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 4 years —

(a) Figures for Rajkot are being reported from January 1930

The spinning of yarn is to a large degree centred in Bombay the mills of that province producing nearly 64 per cent of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced lark about 10 per cent while Bengal and the Central Provinces produced 44 and 53 per cent. Bihar where the production is as yet very limited

BOMBAY ISLAND

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay Island —

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin

higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India and the Bombay Presidency produced in 1931 32 nearly 76 per cent. of the cloth woven in India. The United Provinces produces 62 per cent. the Central Provinces 36 per cent. and Madras 36 per cent. Grey and Bleached goods represent nearly 80 per cent. of the whole production.

ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States —

	1928-29	1929-30	1930-31	1931-32
Grey and Bleached piece-goods—				
Pounds	330 925 376	421 758 613	460 325 143	560 016 204
Yards	1,409 822 553	1,814 920 801	2,003 490 340	2 311 104 405
Coloured piece-goods—				
Pounds	102 175 808	125 958 686	117 518 225	178 021 286

* Year ending 31st August

† Does not include 24 Mills in course of erection

The Jute Industry.

Considering its present dimensions the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Elahra in 1856, and the first power-loom was introduced in 1859. The original output was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 5,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a middleman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rees, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee and while there Mr John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal, where the jute comes from and spins it there. This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Elahra, the site of the present Wallington mill, near Serampore and here, in 1855, the first machine spun jute yarns were made. As soot infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Elahra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power looms.—The pioneer's example was followed by Mr George Henderson of that silk firm, and in 1859 the Borneo Jute Co was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhindered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Goudipore, Seragunge, and Inna Jute Mills.

"From 1866 to 1874," writes Mr David Wallace in "The Romance of Jute," "the five mills excepting the Elahra mill simply coined money and brought the total of their looms up to 1,250. To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore

Company. On the working of their first half year, a 15 per cent interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent premium. The dividend for the first year, ending August 1874, was 25 per cent, for 1874, 20 per cent, and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Fort Canning bubble, and the condition of the jute industry in 1872-73 seemed to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samannger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah Oriental (now Union), Asiatic (now Soorah), Chiv, Bengal Pressing and Manufacturing Co (now the Bollinghata-Barnagore branch mill), Rustumjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 2,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co and the Rustumjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarbatty promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co from Messrs. Jardine, Skinner & Co to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Diaghur, Victoria and Kankarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,400 spindles, once merged into the Wallington branch of the Champdany Co. Between 1896 and 1909 the following new mills were started—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo India), Khardah, Gondolpara (French owned), Alliance, Anthon, Anglo-India, Standard, National, Delta (which absorbed the Seraj gungel), and the Kinnless. A half of four years witnessed large extensions to the existing mills, besides further heavy extensions—Dalkhowa, Alexandria, Kishati, Lawrence, Madana, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of Hakumchand Birin, Shree Hanuman, Jagabhai, Premchand and Agarpara Mills which—with the exception of the last named—are under Indian ownership.

Progress of the Industry

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows quinquennial averages from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1926-27 and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100 —

	Number of mills at work.	Authorized Capital (in lakhs of Rs.)	Number (in thousands) of		
			Persons employed daily (average)	Looms.	Spindles
Average—					
1879-80 to 1883-84	21 (100)	270 7 (100)	38 8 (100)	5 5 (100)	88 (100)
1884-85 to 1888-89	24 (114)	341 6 (126)	52 7 (135)	7 (127)	138 4 (157)
1889-90 to 1893-94	26 (124)	402 6 (149)	64 3 (165)	8 3 (181)	172 6 (196)
1894-95 to 1898-99	31 (148)	522 1 (193)	86 7 (223)	11 7 (213)	244 8 (278)
1899-1900 to 1903-04	36 (171)	680 (251)	114 2 (294)	16 2 (355)	334 6 (380)

1929-30	98 (466)	2,188 6 (807)	348 2 (890)	53 9 (980)	1,140 4 (1,290)

* Revised

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty-three times as great as the average value of the export in the period 1879-80 to 1883-84 —

	Jute manufactures.		Value in lakhs of Rs.
	Gunny bags in millions of number	Gunny cloths in millions of yards.	
1879-80 to 1883-84	54 9 (100)	4 4 (100)	124 9 (100)
1884-85 to 1888-89	77 (140)	15 4 (380)	182 9 (138)
1889-90 to 1893-94	111 5 (203)	41 (932)	286 2 (223)
1894-95 to 1898-99	171 2 (312)	132 (4,186)	518 (415)
1899-1900 to 1903-04	206 5 (376)	427 2 (9,700)	826 5 (662)
1904-05 to 1908-09	257 8 (469)	808 (15,864)	1,447 7 (1,154)
1909-10 to 1913-14	339 1 (618)	970 (2,045)	2,024 8 (1,621)
1914-15 to 1918-19	667 6 (1,210)	1,156 (26,273)	4,019 3 (3,218)
1919-20	342 7 (624)	1,275 1 (28,980)	5,001 5 (4,004)
1920-21	533 9 (987)	1,357 7 (30,800)	5,299 4 (4,273)
1921-22	346 7 (715)	*1,207 5 (28,000)	2,999 5 (2,419)
1922-23	344 2 (637)	1,254 3 (31,860)	4,049 4 (3,255)
1923-24	412 7 (752)	1,348 7 (30,652)	4,223 3 (3,382)
1924-25	425 1 (774)	1,454 2 (32,065)	5,148 8 (4,122)
1925-26	425 0 (774)	1,461 3 (32,211)	5,752 1 (4,605)
1926-27	449 0 (818)	1,503 1 (34,181)	5,997 3 (4,822)
1927-28	453 1 (843)	1,552 7 (35,289)	5,321 8 (4,260)
1928-29	497 6 (906)	1,568 2 (35,640)	5,556 4 (4,523)
1929-30	522 3 (961)	1,650 0 (37,511)	6,168 7 (4,980)
1930-31	434 0 (790)	1,270 9 (28,831)	3,148 8 (2,521)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20 the export showed an increase, as compared with the average of the war quinquennium (1914-15 to 1918-19). In the following two years, the export recorded a decrease and in 1922-23 they again made a recovery and amounted to 578,000 tons

It again declined to Rs. 66. In 1921-22 the price rose to Rs. 73 at the end of September, but fell back again to Rs. 50 at the end of November and recovered to Rs. 54 at the close of the year

Average price of jute ordinary,
per bale of 400 lbs

Jute, raw, ton

The total quantity of jute manufacture exported by sea from Calcutta during the year 1922-23 was 668,000 tons as against 639,000 tons in the preceding year and 608 500 tons in the pre-war year 1918-19. The values of these exports amounted to Rs. 40.28 lakhs or an increase of Rs. 10.36 lakhs over the preceding year and Rs. 12.08 lakhs over the pre-war year. The shipments of gunny bags were valued at Rs. 15.32 lakhs and of gunny cloth Rs. 24.24 lakhs as against Rs. 13.56 and Rs. 15.92 lakhs respectively in the preceding year and Rs. 12.48 and Rs. 15.58 lakhs in the pre-war year.

The price of raw jute reached a very high point in 1904-07, the rate being Rs. 65 per bale. In 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10 the price having declined to Rs. 34 and Rs. 31, in 1917-18 it dropped to Rs. 33-8-0 but rose again in 1919-20 up to Rs. 77-8-0. In 1920-21 it dropped to Rs. 65 but rose again to Rs. 86

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances — In 1886 the existing mills, finding that, in spite of the constant opening up of new mills, working results were not favourable, came to an agreement with the late S. E. J. Clarke Secretary to the Chamber of Commerce as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886 was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewal dictated the extent of the short time which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time 10 per cent of the spinning looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are —
Chairman — Mr J. N. M. S.
Members of Committee — Mr Sheokissen Bhatter, Mr C. G. Cooper M.L.C. Mr F. Graham Mr D. J. Lockie Mr G. A. Mowen and Mr J. E. Walker.

Working days — With the introduction of the electric light into the mills in 1896, the

working day was increased to 15 hours, Saturday included which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up but their action went no further than applying moral suasion, backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *en masse* could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr J. H. Parks to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr Parks came and wrote a report which the Association promptly pigeon holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others differing in points of detail but with the same object in view namely the restriction of production. During the past 10 years a policy of curtailment of

output has been continuously in force. The mills in the membership of the Association, comprising some 95 per cent of the trade, are at present working 40 hours per week, with 15 per cent of the total complement of looms sealed and the current agreement incorporates a clause which provides that the mills will not instal any extra productive machinery or relative buildings during the currency of the agreement which will remain in force until three months' notice of intention to alter the present working arrangements, or to terminate the agreement has expired. In addition to this working arrangement which as has been stated above applies only to the mills in the membership of the Association there came into force with effect from 1st August 1933 an agreement with the four principal mills outside the Association namely, Adamjee, Agarpara, Guggalhal and Ludlow whereby these mills have under taken to restrict their working hours to 54 per week up to 30th June 1934. Six of the Association mills—three Hamman, Breinhard, Craig, Waverley, Megna and Nuddes—have also been granted the privilege of working 54 hours per week with a full complement of machinery up to 30th June 1933.

An Association, styled the Calcutta Jute Dealers Association has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are buyers and brokers of jute for sale to the jute mills in and around Calcutta. The present Committee—Mr. H. N. Luke, Chairman; Members—Mr. H. U. Seta, Mr. I. Kerr, Mr. H. F. Ivitt, Mr. A. C. Robertson, Mr. C. B. Taylor.

Effects of the War—The official review of the Trade of India in 1916-17 says—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however was less than in the preceding year. The estimated yield of the crop was 12 per cent above that of the previous year, viz., 1,490,000 tons or 8,540,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly via Dunkirk), Russia (via Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent, in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined and have since gone still lower.

Jute Manufacturers—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 243 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped in-

creased while the weight decreased and bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 41,293 looms and 893,339 spindles. The number of persons employed was 265,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 totalled from 850 million bags to 842 million bags, but the value increased from Rs. 13,87 lakhs to Rs. 15,82 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards valued at Rs. 15,62 lakhs and Rs. 24,24 lakhs respectively.

Hemp and Jute Substitutes

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the Deccan hemp plant (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type B, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft to 12 ft long, of an exceptionally light colour, well cleaned and of good strength. It was valued at \$18 per ton with Bimlipatana jute at \$12 10s and Bengal first mark jute at \$17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces and Madras where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties. It is thought, in the preparation of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depressed during the first six months of 1914 owing to large stocks held, but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 37 per cent from 137,412 cwts to 269,487 cwts and the value from Rs. 26 93 lakhs to Rs. 36 68 lakhs.

THE WOOL INDUSTRY

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet, and in normal years, from Afghanistan imports of raw wool in 1931-32 amounted to 6.7 million lbs. valued at Rs. 31 lakhs showing a marked increase compared with the previous year. Australia and Persia were the two important sources of supply. Australia sent 2.9 million lbs. and Persia a little under 2 million lbs.

Production in India.—The production of wool in India is estimated at 60 million lbs. the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of carpet wools and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some sameness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of woollen mills at work in British India in 1902 was three, with an authorised capital of Rs. 28,50,000, and employing 23,800 spindles and 624 looms. The number of persons employed

in the industry then was 2,550 and the quantity of woollen goods produced 2,148,000 lbs. At the end of 1917 the number of mills had risen to five, with an authorised capital of Rs. 2,56,50,000 employing 30,808 spindles and 1,155 looms. The weight of goods produced then was 9,74,264 lbs. and the number of persons employed 7,824. With regard to Indian States, there was one mill in Mysore in 1902 with a capital of Rs. 6,00,000 employing 1,480 spindles and 46 looms. The quantity of goods produced was 1,188,000 lbs. and the number of persons employed 297. In 1907 there was still only the one mill working in an Indian State—the authorised capital had been increased to Rs. 15,00,000, the quantity of goods produced to 1,724,087 lbs. and the number of persons employed to 563. Three of the mills manufacture all classes of woollen and worsted goods, the remainder manufacturing blankets only. The existence of these mills in India proved of great service to Government in the meeting of war requirements, and they were all employed to their fullest capacity in supplying army demands for great coat cloth, serge puttees, flannels, blankets and hosiery. Their total capacity, however, was not sufficient to meet the full requirements of the army, and consequently their supplies had to be supplemented by large imports from home. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Blanket weaving and carpet manufacture are carried on in various parts of the country notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from pashm, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mukha, Govt. Press, Calcutta, (1919).

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the silkworm were introduced. But the trade gradually declined for the following reasons—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organised new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China has been reared for centuries. The caprice of fashion has, from time to time powerfully modified the Indian silk trade. The special properties of the *borah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressing as in India to treat the subject of silk and the silk industries under two sections, viz., *Bombycidae*, the domesticated or mulberry feeding silkworms, and *Saturniidae*, the wild or non-mulberry feeding worms. In India the mulberry worm (*Bombyx Mori*) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. Indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam as also of the Nilgiri hills.

India has three well known purely indigenous silkworms, the *tassar* the *mooga* and the *eri*. The first is widely distributed on the lower hills more especially those of the great central tableland, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *mooga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The

eri silk on the other hand is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross breeds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs 8,000 a year to the Tata firm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut.-Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs 2,000 towards the expenses. Sir Durabi Tata has also made a donation of Rs 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross breeding experiments with a view to establish a multi voltine hybrid of European quality. There is a Government sericultural farm at Berhampore where it is said, a pure white multi voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows:—the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled *First Report on the Experiments carried out at Pusa to improve the Mulberry*

Silk Industry. In a short Preliminary note, Mr. Bainbridge Fletcher (Imperial Entomologist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa, in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and output than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agriculture Department, Bengal for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1912 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends

largely on the willingness of the rearsers to pay an adequate price for pure seed.

A pamphlet was published in 1912, by Mr. M. N. De, Sericultural Assistant at Pusa which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the provision of two small pulleys, to the ordinary Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine) whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the standing and storage of cocoons and the temperature and quality of the water used in the reeling pans great improvements can be effected in most silk centres in Bengal and other districts.

Exports of silk.—As a result of the war the trade has shown in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs. 12 lakhs to Rs. 27½ lakhs of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 5½ lakhs. In 1917-18 exports of raw silk and silk manufactures amounted to Rs. 2,34 lakhs in value, compared with Rs. 10.08 lakhs in the previous year.

Indigo

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 800 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wool industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry in the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through

misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memoirs* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the *ai* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vindictive, merciless the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure but one exclusively of natural versus synthetic indigo. ("See *Watts' Commercial Products of India*."). In this connection it may be noted that increases in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indigo. In February 1918 a conference was held at Delhi when the possibility of assisting the natural indigo industry was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs. Howard of Pusa in *Bulletins* Nos. 51 and 54 of

the Agricultural Research Institute. Other aspects of the question were fully examined last year in the *Agricultural Journal of India* by Mr. W. A. Davis, Indigo Research Chemist to the Government of India. An Indigo Cess Bill was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo, the proceeds of the cess being received and expended by Government.

Decline of the Industry—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly. Apart from slight recoveries in 1908-09 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

The total yield in 1931-32 was estimated at 11,000 cwts. The exports, which are no longer of much importance, amounted only to 799 cwts.

OILS AND OIL CAKES.

Oilseeds ranked seventh among India's exports in 1931-32 and represented 9.86 per cent of the total value of exports. The total exports of oilseeds fell from 1,037,000 tons valued at Rs. 17.86 lakhs in 1930-31 to 988,000 tons valued at Rs. 14.59 lakhs. Details of oilseeds exported during 1931-32 appear in the section of the Year Book dealing with exports.

A pamphlet on the subject which was published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of coconut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any proposal to develop in India an oil-milling industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian-made oils, other than coconut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant growing in a wild condition was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years it was handed over to the Assam Company. It may be

said, however that the foundations of the present tea industry were laid between 1855 and 1868. Since the latter date the growth of the industry has been phenomenal and in less than a hundred years the British Empire has become the tea garden and tea-shop of the world.

The following table shows the growth of the industry since 1875 —

Progress of the Industry

Year	Area under tea in 000 acres	Production in 000 000 lbs	Year	Area under tea in 000 acres	Production in 000 000 lbs
1875-79 (average)	173	34	1925	672	335
1880-84	241	57	1926	679	364
1885-89	307	90	1927	690	361
1900-1904	500	196	1928	702	373
1910	533	249	1929	712	401
1915	594	352	1930	802	391
1920	654	322	1931	807	394

It will be seen from the above table that during the last fifty years while the area under sea has risen by over 500 per cent, the production has increased more than ten times. Assam and Bengal are the two most important centres of the tea industry in India. Assam alone accounting for more than half the total production.

The following table shows the various centres of the industry in the country and their relative importance —

Provinces	Area under crop 000 acres	Production 000 lbs	Average daily working strength (permanent and temporary)
Assam —			
Surma Valley	145	73 784	156 439
Assam Valley	286	185 157	400,996
Total	430	258 941	557 434
Bengal —			
Darjeeling	61	23 009	65,522
Jalpaiguri	128	86,427	125,682
Chittagong	6	1 517	5,745
Total	195	109,953	196 899
Madras —			
Nilgiris	32	11 403	30,759
Kolabar	13	6,493	12 632
Coimbatore	22	9,700	27,217
Others	*	34	44
Total	67	27 630	70,652
Coorg	*	169	620
Punjab	10	1,930	10,995
United Provinces	6	1,430	3 871
Bihar and Orissa	4	853	2 902
Total British India	712	400,965	843 623
Indian States	47	32,083	86,849
Total India	759	432,998	930,472

* Less than 500 acres

Although India produces such large quantities of tea its consumption of tea is comparatively very little, about 57 million lbs. as compared with 221 million lbs in the United Kingdom and the consumption per head is only 18 lb as compared with 920 lbs in the United Kingdom.

The low domestic consumption, however, enables India to export large quantities to other countries the principal among which is the United Kingdom. It is estimated that India supplies about 40 per cent of the world demand of this commodity.

The following table explains briefly the position as regards the export of tea from India —

Year	Amount exported (million of lbs.)	Value in lakhs of rupees.	Cost as percentage of value of total exports
1	2	3	4
1926-27	346	29.04	9
1927-28	322	32.45	10
1928-29	380	26.69	8
1929-30	377	26.01	8
1930-31	356	23.56	
1931-32	341	19.44	

The following figures show the proportion of exports of tea from India by sea sent to different parts of the world to the total exports —

	1928-29 per cent	1929-30 per cent
To United Kingdom	83.0	84.2
To East of Europe	2.0	2.2
To Asia	5.3	3.8
To America	5.7	5.8
To Australia	1.6	1.3
To Africa	1.9	2.7
	100	100

A considerable quantity of Indian tea imported into the United Kingdom is normally re-exported to other foreign countries.

The year 1931 was one of the most critical through which the tea industry has passed since its early difficulties. From 1923 to 1927 the prices obtained for tea were good but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1923 all tea fluctuated in the London market within a range of 25 per cent Indian common tea fell by about 50 per cent.

The following table gives the average wholesale prices of tea in Mining Lane from 1922-30, in pence per lb —

Average Wholesale Prices of Tea, in Mining Lane, 1922-30, in Pence per lb

Year	North India	South India
1922	15.46	14.00
1923	16.76	16.14
1924	19.92	19.02
1925	17.08	17.62
1926	19.36	19.00

Year	North India	South India
1927	19.01	18.88
1928	16.49	15.40
1929	15.72	15.85
1930	14.69	14.52

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11 100 —

	Average price at auction sales	
	Price per lb As p	Index Number
1901-02 to 1910-11	6.0	100
1927-28	14.10	247
1928-29	11.4	189
1929-30	9.11	163

Tea prices experienced a catastrophic slump towards the end of the 1930-31. The average price realised at the last auction of the year having been 5 as 10 p. In the first sale during 1931-32, however, the average price realised was 8 as 8 p. This advance was however primarily due to the predominance of better grades in the invoices offered for sale and did not last. Prices fluctuated violently and declined steadily until 4 as 8 p per lb was reached by the middle of February 1932. There was a slight rally at the end of February when the quotation touched 5 as 1 1/2.

The fall in tea prices greatly affected the profits of tea companies. The following table which shows the profit per acre of 65 tea companies gives an idea of the effect on profits of the fall in prices —

Profit per Acre of 65 Indian Tea Companies

	1913	1924	1928	1929
Average profit per mature acre	£ 6-10-7	£ 15-2-0	£ 10-0-0	£ 6-9-0
Average profit in pence per lb	2 6	6 4	3 84	2 26
Average crop per mature acre	599 lbs	560 lbs	625 lbs	684 lbs

It is quite clear from the above table that although the yield per acre has considerably increased the profits per acre are actually lower than in 1913.

The main reasons of the slump in the tea industry are over-production and intense competition, particularly from Java and Sumatra in order to counteract the adverse influence of the former an agreement to restrict output, was reached early in 1930 by associations of tea-growers. For India and Ceylon the degree of restriction to be undertaken varied according to the quality of the tea produced being greater for the lower qualities than for the finer.

Latest available reports show that tea-stocks in the world markets are still far too high to see a spectacular return to prosperity.

During the year 1931-32 there was a considerable fall in the wages of workers on tea plantations. The average wages of men, women and children in the Assam Valley were Rs 12 8-5 9-8-7 and 6-15 8 respectively as compared with Rs 14 0-11 10-12-7 and 7 4-7 respectively in 1930-31. In the Surma Valley the average earnings fell from Rs 9-7-2 to Rs 7-14-11 in the case of men Rs 10-5 to Rs 6-1 1 in the case of women and Rs 8-3-6 to Rs 4 9-1 in the case of children.

Under the Ottawa agreement Indian Tea has been granted preference by Great Britain and this may to some extent minimise the competition of Java and Sumatra tea in the British market.

Apart from the slump in tea prices, the year 1931 was a very eventful one from the point of view of the tea industry in another direction. It was during this year that the Royal Commission on Labour published their monumental report. The recommendations contained therein are very vital to the future welfare of the industry and the principal amongst them have therefore been reproduced below —

(1) No further legislation making a breach of contract of service a criminal offence should be countenanced.

(2) The power conferred by section 8 of the Assam Labour and Emigration Act to prohibit recruitment in Assam in particular localities should be withdrawn immediately and no barrier should be set up to prevent free movement of labour from one part of India to another.

(3) The Assam Labour and Emigration Act should be repealed and a new measure set up in its place.

(4) The Assam Labour Board should be abolished.

(5) The Government of India should appoint a Protector of Immigrants in Assam to look after the interests of emigrants from other Provinces who have not yet settled in Assam.

(6) Every future assisted emigrant to an Assam tea garden should have right after the first three years to be repatriated at the employers' expense.

(7) A worker dismissed before the expiry of the three years should be entitled to repatriation at the expense of the employer dismissing him unless it is established that the dismissal was due to wilful misconduct.

(8) The establishment of statutory wage fixing machinery if practicable is desirable, and there are reasons for believing that if proper methods are adopted a practicable scheme can be devised.

(9) Before legislation is undertaken, one enquiry should be undertaken as to the most suitable form of machinery the actual rates paid and the variation in these rates between district and district and garden and garden.

(10) Maternity benefits should be provided for by legislation.

(11) The employment, either directly or with their parents of children before the age of 10 years should be prohibited by law.

(12) Boards of Health and Welfare should be established under statute for convenient planting areas.

Some of the above recommendations have already been taken up by the Government of India for legislative or administrative action.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th Century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The area under coffee in 1930 (including plantations of less than 10 acres) was 1,68,000 acres, an increase of 14 per cent over the figures for 1925 and the production during the year was 3,52,000 cwts as compared with 2,72,000 cwts in 1925.

The total exports of coffee decreased from 20,000 cwts in 1925-26 to 150,000 cwts in 1928-29, but in 1927-28 there was a sharp rise to 2,77,000 cwts. In 1928-29 and 1929-30 the shipments again declined and amounted to 1,98,000 cwts and 1,84,000 cwts respectively. The principal countries to which Indian coffee was exported were, as usual, the United Kingdom and France.

Not only does India export coffee in large quantities but it also imports it chiefly from Java, Ceylon and the Straits Settlements which it re-exports to Mascot Territory, Iraq and the Bahrain Islands.

The following table gives the figures of the production and exports of Indian coffee —

Production and Export of Indian Coffee in thousands cwts

12 Months ending June 30th	Production	Export	Surplus available for Home consumption.
1925	272 1	251 9	20 2
1928	317 5	260 9	56 5
1929	247 8	142 6	105 2
1930	352 0	248 0	109 0

Making allowance for the re-exports from India of imported coffee, the consumption of Coffee in India in 1930 was approaching four times the amount consumed in 1925.

The total reported production of cured coffee during 1930-31 was 35 million lbs. as against 39 million lbs. in the previous year. Exports declined from 295,000 cwts in 1930-31 to 156,000 cwts in 1931-32. Local consumption of Indian coffee which has been expanding expanded still further owing to the restrictions on imported coffee. As regards exports the United Kingdom and France which constitute the principal markets, both reduced their respective off-takes very considerably and required 44,000 and 43,000 cwts respectively instead of 78,000 cwts and 103,000 cwts a year ago. The total value of the exports of coffee was Rs. 94 lakhs in 1931-32 as against Rs. 1,92 lakhs in 1930-31.

The daily average number of persons employed in the coffee plantations in 1929-30 was returned

at 92,504 of whom 55,972 were permanently employed and 36,532 temporarily employed as compared with 94,863 persons (44,744 garden and 50,119 outside labour permanently employed and 31,027 temporary outside labour) in 1928-29.

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. Since the year 1925 there has been a general downward trend in coffee prices but until the end of 1929 the fall was comparatively slow but since then it has been very rapid. This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s. in 1928 and 127s. in 1929 it fell to 86s. in 1930.

The declared value per cwt of coffee was Rs. 60-11-9 in 1931-32 as against Rs. 65-8-1 in 1930-31.

INDIAN TOBACCO

The tobacco plant was introduced into India by the Portuguese about the year 1606. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres, namely, (1) Eastern and Northern Bengal (more especially the District of Rangpur), (2) Madras, Trichinopoly, Dindigul, Coconada and Calcutt in Southern India, and (3) Rangoon and Moulaia in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

The question of improving the quality of Indian tobacco has received the attention of the Botanical section of the Agricultural Research Institute, Poona, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Poona is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties—"Seywet-gyi," the large-leaved variety and "Seywet gyan," a smaller leaved variety with

pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are—(1) the Coimbatore and Dindigul tract of Madras, where the *Vel-Kappal* and *Wara Kappal* varieties are largely grown, the former supplying the Trichinopoly cigar (45) the Godavari Delta of Madras (46) the Rangpur tract of Bengal (47) the Districts of Bihar and Orissa, (48) Guzerat in Bombay and (49) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat the bundles being fan-shaped. In this condition they are baled, the broom like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar making.

Exports.—Exports of unmanufactured tobacco declined by 9 per cent in quantity from 28 million lbs 1930-31 to 25.4 million lbs in 1931-32 and by 17 per cent in value from Rs 97 lakhs to Rs 81 lakhs. In the United Kingdom notwithstanding a reduced consumptive demand Indian tobacco gained public favour with the increasing popularity of Empire grown tobacco and the shipments advanced from 10 million lbs to 11 million lbs. There were however decreases in the exports to Aden, the Straits Settlements and the Nether lands which fell by 1 million lbs each to 4½ and 1 million lbs respectively. An interesting development of the trade is the rapid increase in purchases by China which absorbed 3 million lbs in 1931-32 as compared with 1 million lbs in the preceding year while Japanese requirements slightly declined to 3.7 million lbs.

The Cocaine Traffic.

The form of cocaine chiefly used in India is *Cocculus hydnocarpus*. This salt forms light shining crystals with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the *Erythroxylon* *Cocculus* which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effective in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be increasing in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth, though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims, but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marangoon and Pondicherry. The main inland distributing centre are Delhi, Lucknow, Meerut, Lahore, Multan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of

newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police officials and give the alarm when a raid is contemplated. During the War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

The Review of the Customs Administration in India for 1930-31 states that during the year a total of 1734½ grains of cocaine were seized by the Customs authorities, of which 1792 ounces were valued at approximately Rs 1,80,000.

The amount seized is either given to Hospital in India or destroyed. It is no longer possible to buy cocaine from any belated seller as it was ten years ago but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows. No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession, and as far as 6 grains may be possessed by any person if covered by a bona fide prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Mention opium and half the Western world directs its thought to India, as though India were a most unscrupulous producer of the most noxious drug on earth. Refer to the League of Nations' proceedings in regard to opium and again, mainly under the leadership of American representatives one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries so much for the internal position.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced the Government of India have responded by stiffening their restrictions on export. There have in recent years mainly at the instance of America, been numerous international conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into those than 1911. On 8th May of that year there was drawn up between India and China an agreement under which the Government of India assented to: (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes, (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure, Shanghai and Canton excepted (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China, and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China *pari passu* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger of smuggling into China, and as an earnest of their desire to assist that country, strictly to

confine the remainder of Indian opium export to the legitimate demands of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non China exports down to it in 1911. In subsequent years she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction and eventual abolition of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non China countries in the East limited in accordance with the agreement with China but exports to non China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923 a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and so far as India was concerned the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound by their letter to do so to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent yearly so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. India is the only country that has made any considerable sacrifices of the kind.

International Aspect of the Problem—It was only during the processes and negotiations by which the Indian opium export trade to China was being suppressed that the Opium question began to assume a widely international aspect. This happened on the initiative of the U.S.A. at whose instance an International Opium Commission met at Shanghai in 1909 and formulated a series of recommendations for the suppression of opium smoking and the regulation of the use of opium and morphia. The United States thereafter advanced a further proposal for an "International Conference at the Hague. This met on 1st December 1911.

and finally drew up a convention on the subject, the terms of this document presented no new ideas to the Government of India. Their provisions India had long observed. As regards morphia and cocaine with which the Hague Conference concerned itself the uses of these drugs in India had long been subject to exceedingly strict regulations. But these two drugs, the use of which for other than medical purposes invariably takes the form of dangerous vice, were becoming a menace to the world. They were not included within the scope of the proposals submitted by the U.S.A. for the consideration of the Conference. It was mainly owing to pressure by the Government of India that they were included within the terms finally signed and the rigid and universal application of the articles of the Convention which apply to them would rid the world of the drug evil.

As regards prepared opium, that is to say smoking opium India does not and never has exported it and the sale of it in India is prohibited. No opium is exported from India to the United States of America. None has been exported to Great Britain by private merchants since 1916. Exports to Great Britain are strictly limited to medicinal requirements and go off solely from the Government of India to the British Government. Nor is Indian opium exported to any other country in Europe.

Indian Uses of Opium.—There is a fundamental difference between the problem in India, and that in foreign countries, particularly in America and Europe. America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India generally speaking eating seems to do little if any harm. Smoking, which is the habit of the Far Eastern races, rather than of the Indian races, seems to do much more harm in India than eating while on the other hand where smoking is in ordinary use competent authorities (e.g., the Royal Commission on Opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India of these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described

as considerable intelligent progress in the development of those regulations upon the use of opium which are time honoured.

The Commission of 1895.—Despite all this, the principles of Indian internal opium policy essentially remain, subject to certain changes of scientific opinion in regard to medicinal uses those laid down by a Royal Commission which was appointed by His Majesty a Government mainly as a result of the activities of the Society for the Suppression of the Opium Trade, in 1898, to inquire into all the circumstances connected with the production and sale of Indian opium. The Society which was largely instrumental in bringing about the institution of the inquiry, recorded its opinion that the appointment of the Commission constituted the greatest and most solid forward step that the movement for the suppression of the opium trade has yet made and considered that the Royal Commission was as fair minded and impartial a tribunal as the Society could have desired to hear its case. The results of the inquiry were published in 1895 in seven volumes.

The Royal Commissioners examined with the greatest care the problem of opium consumption in India and in brief they found that it was not only subject to careful regulation but was governed by longstanding and admirable disciplinary habits among the people. Excessive use, they found, was exceptional, and condemned by public opinion. As regards the legal restriction of its use to medical needs, they advised that Government could do no more than limit the extent of cultivation and hold a monopoly of manufacture and wholesale supply and that to draw a line in popular opinion between medical uses and those not strictly so describable would be impracticable. They agreed that the mass of Indian opinion was opposed to prohibition as an unnecessary restriction on individual liberty and interference with established customs and habits. Apart from the religious question they found Indians generally to consider the use of alcohol to be more objectionable, more injurious and more disgraceful.

The Government of Lord Hardinge in a Despatch to His Majesty a Government in 1911 and that of Lord Reading, in a despatch dated 24th March, 1921, both in the same words took their stand on the conclusion of the Royal Commission that the opium habit as a vice scarcely exists in India, that opium is extensively used for non-medical and quasi-medical purposes, in some cases with benefit and for the most part without injurious consequences, that the non-medical uses are so interwoven with the medical uses that it would not be practicable to draw a distinction between them in the distribution and sale of the drug and that it is not necessary that the growth of the poppy and the manufacture and sale of opium in British India should be prohibited except for medical purposes. The despatch of Lord Hardinge a Government was approvingly quoted by Lord Reading's Government a few years ago. It has long been recognised that any attempt to eradicate by law the use of opium would be open to all the objections involved in bureaucratic interference with popular custom. Bating it is largely quasi medical, it is used for the prevention cure and alleviation of disease as a prophylactic as an anodyne and as the commonest and most

treasured household medicine of the people to whom qualified medical assistance is inaccessible. It is also taken as a tonic and as a restorative to lessen or avert fatigue and in other ways in which, when moderately used it is relatively innocuous.

Present Policy.—The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is and has been one of non-interference with the moderate use of raw opium whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings particularly those whose occupations involve exposure or severe bodily exertion for a stimulant or narcotic. Excessive indulgence it is and always has been the desire of Government to express.

Opium is under the current Indian constitution a Provincial Transferred Subject. Nevertheless owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All India Conference which was opened at Simla by Lord Irwin on 5th May 1930 to consider the question of certain areas where opium consumption was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The conference after an exhaustive discussion of the phenomena presented by the various areas selected for investigation and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Porojore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were ample explanations showing harmless causes for what appeared to be excessive consumption in many places.

While speaking at the Second Geneva Opium Conference on 10th January 1925 Lord Cecil stated that he had seen figures apparently taken from a report made by the United States Treasury, to the effect that consumption was greater in America than in India. The estimate framed by the Advisory Committee of the League of the annual requirements of opium for strictly medicinal and scientific purposes is 600 milligrammes or 5.25 grains per capita which is roughly equivalent to 6 Indian seers per 10,000. The Health Committee of the League opined that this could be reduced to 450 milligrammes or 3.94 grains in countries possessing a well developed medical service. The consumption per capita in British India during 1924-25 worked out at 17.3 grains per head. The rate of consumption has certainly fallen since the compilation of this published figure. The amount includes veterinary uses and these are extensive, though to secure statistics of the quantity of opium given to animals is impossible. Allowance also has to be made for the poor morphine content of Indian opium, which is about 8 per cent. at 90 deg. consistency and the limited number of medical practitioners trained on Western lines to administer strictly measured doses. Lord Cecil's statement at the League of Nations was received with extreme criticism by Mr Porter of the American delegation. Mr Porter said the American statistics cited had been disavowed and that Lord Cecil's observations were a vile slander upon the people of the United States. Lord Cecil apologized and withdrew his statement. But Mr Frederick Wallis, Commissioner of Correction New York writing in the Current History Magazine for February 1925, showed the annual per capita consumption in Russia to be one grain in Germany 2 grains in England 3 grains in France 4 grains and in the United States 36 grains. In Current History for March 1925 Mr Wallis defended this last figure and said that in view of the smuggling into the United States it would appear to me that the consumption would be much larger than the Government officially gave as 36 grains.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord.

GLASS AND GLASSWARE

The total value of the imports of glass and glassware amounted to Rs. 1,22 lakhs as compared with Rs. 1,40 lakhs in 1930-31 and Rs. 1,52 lakhs in 1923-24. All the descriptions under this head without exception recorded decreases. In the principal countries participating in this trade, Ceylon showed the greatest percentage decline with her supplies falling in value from Rs. 38 lakhs to Rs. 27 lakhs which was less than one third of what she had realised in 1929-30. Japan retained the foremost position in the trade but the value of her supplies fell from Rs. 65 lakhs to Rs. 42 lakhs.

Manufacture of Glass in India.—Glass was manufactured in India in centuries before Christ and Pliny makes mention of Indian Glass as being of superior quality. As a result of recent archaeological explorations a

number of small crude glass vessels have been discovered indicative of the very primitive stage of the industry. But no further traces of ancient Indian Glass industry as such survive yet it is certain that by the sixteenth century it was an established industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last century when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed while some are still clinging to life owing to war conditions. They mainly devote themselves to the manufacture

of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well defined classes of the industry in its present stage, (1) Indigenous Cottage Industry and (2) the modern Factory Industry.

(1) The Indigenous Cottage Industry which is represented in all parts of the country, but has its chief centres in Ferozabad District of U. P., and Belgium District, in the South, is mainly concerned with the manufacture of cheap bangles made from glass cakes or blocks made in larger factories. The industry is at present in a flourishing state and supplies nearly one third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose 'silky' bangles are ousting the old type Indian ones.

(2) The modern Factory type of organization of this industry is just in its infancy at present. The existing factories either stop at producing glass cakes for bangles as in Ferozabad or simple kind of lampwares and bottles. With the existing state of knowledge and machinery in India they can neither produce sheet and plate glass, nor do they pretend to manufacture laboratory or table glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware etc., and in order to meet the Indian demand for them, new factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are at present 14 factories engaged in the production of lampware, of which two or three only produce bottle and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad and Bijnor and Ambala, while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the later years of the war period a number of Glass Works were opened in the Bombay Presidency and adjoining districts local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventable causes, prominent among which were (1) Lack of enlightened management (2) Lack of proper

commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (a) nearness of quartz and fire-clay, (b) nearness of fuel, and (c) by the nearness of market. At least two must be present. In some concerns, two were absent: (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles, and bangles etc. (5) Paucity of sufficient fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest. Chief among them are (1) The industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Paucity of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are untrained able to manage. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal fields. (5) To a certain extent, competition from Japan and European countries.

Alkali used is almost entirely of English manufacture being Carbonate of Soda 98.99% in a powdered form. This alkali has almost completely taken place of the various Alkaline Earths formerly employed by the Glass Bangle manufacturers as the latter cannot be used in the manufacture of glass which is to compete with the imported article. These points must be carefully noted for future guidance.

The industry developed considerably under war conditions but in peace times, in this transition stage, immediate efforts must be made in the direction of what the Indian Industrial Commission say in their Report (Appendix B), viz. "The Glass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good, there was a large demand for hides, and prices ruled high. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India had up to that time been largely, if not quite entirely, in the hands of German firms or firms of German origin and Germany had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent of the total exports. In 1912-13 she took 32 per cent and in 1913-14, 35 per cent. Germany still takes the major share of India's raw hides while America takes the bulk of goat skin exports. Shipments of tanned hides go mostly to Great Britain.

The trade in hides and skins was even smaller than in the preceding year, the total value falling from Rs 11,74 lakhs to Rs 8,92 lakhs or a decline of 24 per cent. The reasons for this decline are the same as in the preceding year, namely the trade depression which led to a reduction in the demand especially in the demand for raw hides and skins. Details are given in the Export Section of the Year Book.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus and are on that account participated in by a comparatively small community. The trade is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rose to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and sequester. It has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

Uses of Indian Hides.—The fifteenth report of the Imperial Economic Committee states that Indian hides both raw and partially tanned, are largely used for the upper leather of boots, partially tanned skins are used for fancy leather articles, bookbinding and for covering the small rollers used in cotton mills for drawing the thread. Raw sheepskins are used for similar articles and also for gloves. They are exported mostly to Germany, France and Italy. Raw goatskins are used almost entirely in the manufacture of glace kid, of which commodity the United States is the chief producer. Eighty five per cent of exports of Indian raw goatskins are sent direct to the United States. The consumption of glace kid in the United Kingdom has remained stationary during the last five years none the less production up to 1928 increased somewhat and exports have slightly grown.

The chief markets for Indian raw hides are in Central and Southern Europe, Hamburg being an important distributing centre. Directly after the war an effort was made to direct more of this trade to the United Kingdom but it has drifted back to Germany. The assortment and grading of raw hides exported from Calcutta

before the war, largely the result of the work of German firms established there, had reached a high standard. After the war the trade became somewhat disorganised from a variety of causes, among which may be cited fiscal changes the entry into the trade of new and at first inexperienced firms, the increased cost of arranging for supervision at up country points. It has, however been recovering its reputation.

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and export skill. Government action to foster the industry was first taken in September 1919 when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent on hides and skins with a rebate of 10 per cent on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

Indigenous methods.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's casia, Mangroves, and Myrabolans. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

INDIAN INVENTIONS AND DESIGNS

A handbook to the Patent Office in India which is published by the Government Press Calcutta, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English Statute of Monopolies which was enacted in 1623, the 21st year of King James the First. In part this Act has been repealed, but the extant portion of the more important section 6 is as follows—

Provided also that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made and of none other.

The existing Indian Patent Law is contained in the Indian Patents and Designs Act 1911 as amended in 1930 and the Rules of 1912. The Patent Office does not deal with trade marks or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act 1914. There is in fact no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act (IV of 1889) which forms Chapter XXIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists however as owing to the absence of provision of law for the registration of trade marks India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after

an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patents and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India including British Baluchistan and the Santhal Parganas. This of course includes Burma but it does not embrace the Native States. Of the latter Hyderabad (Deccan), Mysore, Gwalior, Baroda, Travancore, Marwar, Cochin, Kashmir, and Jamu have ordinances of their own for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. A patent granted in British India does not extend to the United Kingdom or to any other British Possession but under the reciprocal arrangements an applicant for an Indian patent has 12 months prior to the United Kingdom, Australia, Canada, New Zealand, the Irish Free State, the Union of South Africa and Ceylon a *vice versa*. The object of the Act of 1911 was to provide a simpler more direct and more effective procedure in regard both to the grant of patent rights and to the subsequent enforcement and operation. The changes made in the law could not here be referred to in detail. They gave further protection both to the inventor by providing that his application should be kept secret until acceptance, and to the public by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established with power to dispose of many matters previously referred to the Governor General in Council and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an exclusive privilege. The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

New Legislation.—Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1930 and includes the following—

If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.

The term of the Patent will be 16 years instead of 14 years.

Patent of Addition will be granted on the original patent without the payment of additional renewal fees but the additional patent will expire with the date of the original patent.

Fresh provisions are made for the use of an invention by Government

Government will grant licences to the public on application if the Patentee refuses to do so on reasonable terms

Several other facilities are given under the Indian Amended Act of 1930 on the lines of the present British Patent Act.

The period of opposition to the grant of a patent has been extended to 4 months from the date of the notification of the Acceptance of the application, instead of 3 months. The provisions contained in the Indian Patents and Designs Rules, as regarded divisional applications in respect of inventions covered by the original application and divided therefrom, have been amplified and embodied in the Act itself. Section 10 has been amended to empower the Controller to decide disputes about proceeding with the applications for patents that may occur between the applicants and third parties, or between joint applicants among themselves

The time for appeal to the Governor-General in Council has been extended to 3 months, instead of 2 months from the date of the decision appealed against. A new Section 21A has been provided relating to secret patents. A new Section 35A has been provided for giving relief in suits for infringement of patents in respect of valid claim despite the existence of invalid claims in the specification

The definition has been altered as to the person entered on the Register as the grantee or proprietor of the patent. Section 73A (4) has been amended to enable British India to enter into reciprocal arrangement with the Indian States

The definition of the term 'Design' has been altered and the time for applying to secure for the registration in India, the priority date of the application in the United Kingdom or other parts of the British Empire, has been extended to 6 months

Printed Specification of applications for patents, which have been accepted (8 annas per copy), may be seen free of charge, together

Note.—The quintennial average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (10-11) are calculated on the annual figures and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(*) Excludes gold imported and exported on behalf of the Bank of England.

(*) Figures are for calendar year ending 31st December.

† Net exports.

According to the report by Mr. N. Mukarji, Actuary to the Government of India, contained in the Indian Insurance Year Book 1931, the number of companies subject to the provisions of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 is 277, of which 130 companies are constituted in India and 147 companies are constituted outside India. Of the 130 Indian companies, 58 are established in the Bombay Presidency, 24 in Bengal, 20 in the Madras Presidency, 14 in the Punjab, 7 in Delhi, 2 each in the United Provinces, the Central Provinces, Ajmer and Baroda, and 1 in Baroda. Of the 147 non-Indian companies, 71 are constituted in the United Kingdom, 31 in the British Dominions and Colonies, 18 in the Continent of Europe, 13 in the United States of America, 9 in Japan and 5 in Java.

Most of the Indian companies carry on life assurance business only. They are 92 in number and of the remaining 38 Indian companies, 18 carry on life business along with other insurance business and 20 carry on insurance business other than life. As regards non-Indian companies, most of them carry on insurance business other than life. Out of the total number of 147 non-Indian companies, 124 carry on insurance business other than life, 9 carry on life business only and 14 carry on life business along with other insurance business. Of the latter 23 companies, 26 are constituted in the United Kingdom, 6 in the British Dominions and Colonies and 1 in Germany.

The total new life assurance business effected in India during 1930 amounted to 145 thousand policies assuring a sum of nearly 27½ crores and yielding a premium income of 1½ crores of which the new business done by Indian companies amounted to 106 thousand policies assuring a sum of about 15½ crores and having a premium income of nearly a crore. The share of the British companies in respect of new sums assured is 4 crores of the Dominion and Colonial companies about 7½ crores and of the single German company ½ crore.

The average sum assured under the new policies issued by Indian companies is Rs. 1,484 and under those issued by non-Indian companies Rs. 2,970 and the average annual premium per Rs. 1,000 sum assured is Rs. 54 in the case of Indian companies and Rs. 59 in the case of non-Indian companies.

The total life assurance business effected in India and remaining in force at the end of 1930 amounted to 717 thousand policies assuring a total sum of 154 crores including reversionary

bonus additions and having a premium income of very nearly 8 crores. Of this the share of Indian companies is represented by 514 thousand policies assuring a sum of 85 crores and having a premium income of over 4 crores.

Most of the Indian companies now transact life assurance business on the scientific principle but there are still some which carry on business on the dividing plan under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year. The Government of India Actuary says in his latest annual report that the main defect of dividing insurance business is that policy holders in each class are charged the same rate of premium of subscription irrespective of their age on admission ranging even in some cases from 18 to 60 years.

Life assurance business of this nature is not only unsound but is apt to lend itself to the practice of fraud on the part of policyholders and agents and later on by the company. Before the Act of 1912 was passed there were numerous companies which transacted life assurance business on the dividing plan and most of them came to grief. Of such companies which were in existence at the time of the passing of the Act the majority have disappeared and some have stopped issuing policies on the dividing plan. A few new companies have taken up this dividing insurance business and it will not be long before they realise their mistake.

Some Indian life offices have extended their operations outside India, mostly in British East Africa and in the Near East. The total new sums assured by these offices outside India in 1930 amounted to 32 lakhs and the average sum assured under each policy was Rs. 2,754.

A striking feature of the Indian companies is (says the Government of India Actuary in his report for the year 1931) the almost negligible amount of business done by them under annuity contracts, while in the case of the non-Indian companies annuity contracts constitute an appreciable portion of their total life assurance business. Even the small amount of annuity business the Indian companies were getting in the past is gradually decreasing. Evidently annuity contracts have not yet found favour with Indians in general.

The life assurance business of Indian companies which steadily increased during ten years up to 1929 received a setback in 1930 owing to the general financial depression. The following table shows the new business effected since 1921 in each year and the total business remaining in force at the end of the year.

Year	New business written during the year	Total business remaining in force at the end of the year
1921	5,47 lakhs.	34 crores
1922	5,64 "	39 "
1923	5,85 "	42 "
1924	6,69 "	47 "
1925	8,15 "	53 "
1926	10,85 "	60 "
1927	12,77 "	71 "
1928	15,41 "	81 "
1929	17,29 "	89 "
1930	16,50 "	

The net income of the Indian companies under their life assurance business from premiums and interest amounted to 5½ crores in 1930 and was in excess of ½ crore over the corresponding income of the previous year. Claims amounted to 1½ crore and exceeded the previous year's figure by a little over 11 lakhs. Claims by death showed an increase nearly 11½ lakhs and claims by survivorship a slight decrease of less than ½ lakh.

The life assurance funds increased by nearly 2 crores during 1930 and amounted to 20½ crores at the end of that year. The average rate of

interest earned on the life funds during the year was a little less than 5½ per cent or short the same as in the previous year.

The Post Office Insurance Fund was instituted by the Government of India in 1883 for the benefit of the postal employees but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties.

The following are some of the important particulars relating to the business of the Fund during the two years 1929-1930 and 1931—

Year ending 31st March	New business effected during the year		Total business remaining in force at the end of the year		Total income	Life Assurance fund at the end of the year
	Number of policies.	Total sums assured	Number of policies	Total sums assured and bonuses		
1929	7,592	1,43,41,000	64,474	13,02,47,000	68,17,000	3,64,44,000
1930	8,894	1,49,56,000	71,479	14,17,81,000	69,56,000	4,02,80,000
1931	9,710	1,50,38,000	79,055	15,32,85,000	76,06,000	4,46,45,000

Fire Marine and Miscellaneous Insurance Business.—The net Indian premium income of all companies under insurance business other than life assurance during 1930 was over 2½ crores of which the Indian companies share was over ½ crore and that of the non-Indian companies nearly 2½ crores. The total amount is composed of—

1,46 lakhs from fire

51 lakhs from marine, and

87 lakhs from miscellaneous insurance business

The Indian companies received—

25 lakhs from fire,

10 lakhs from marine and

26 lakhs from miscellaneous insurance business

The total assets of Indian companies amount to 27 crores of which the stock exchange securities form the bulk. These securities are shown in the account at a net value of 19½ crores. Mortgage loans on policies and on stocks and shares are shown at about 8½ crores, land and house property still valued at 1½ crore deposits cash and stamps are shown at ½ crore agents' balances and other outstanding items at over 1½ crore and loans on personal security and other miscellaneous assets at nearly ½ crore. Investments of Indian companies outside India amount to 3½ crores.

Customs Tariff.

General import duties are levied for fiscal purposes and not for the protection of Indian industries. But the tariff has been modified with a view to admitting free or at favourable rates articles the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances, are admitted free. Machinery, printing materials etc., are assessed at 2½ per cent. and iron and steel railway material and ships at 10 per cent. High duties are imposed on tobacco, liquors and matches.

Re imports.—Articles of foreign production on which import duty has been once paid if subsequently exported are on re import exempted from duty on the following conditions —

The Collector of Customs must be satisfied —

- (1) of the identity of the articles ;
- (2) that no drawback of duty was paid on their export
- (3) that the ownership has not changed between the time of re export and subsequent re import
- (4) that they are private personal property re-imported for personal use not mer- chandise for sale
- (5) that not more than three years have passed since they were re-exported

Duty is, however, charged on the cost of repairs done to the articles while abroad which should be declared by the person re importing the articles in a form which will be supplied to him at the time of re importation.

To facilitate identification on re importation an export certificate giving the necessary particulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examination.

This concession of free entry on re importation is not extended for the benefit of Companies, or Corporate Bodies.

Drawbacks.—When any goods, capable of being easily identified which have been imported by sea into any Customs port from any foreign port and upon which duties of Customs have been paid on importation are re exported by sea from such Customs port to any foreign port or as provisions or stores for use on board a ship proceeding to a foreign port seven eighths of such duties shall except as otherwise hereinafter provided be repaid as drawback.

Provided that, in every such case, the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re export be made within two years from the date of importation, as shown by the records of the Customs House or within such extended

term as the Chief Customs Authority, or Chief Customs Officer on sufficient cause being shown in any case determines provided further that the Chief Customs Officer shall not extend the term to a period exceeding 3 years.

When any goods, having been charged with import duty at one Customs port and thence exported to another are re exported by sea as afore said drawback shall be allowed on such goods as if they had been so re exported from the former port.

Provided that, in every such case, the goods be identified to the satisfaction of the Officer in Charge of the Customs House at the port of final exportation and that such final exportation be made within three years from the date on which they were first imported into British India.

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for shipment.

Every person or his duly authorised agent, claiming drawback on any goods duly exported shall make and subscribe a declaration that such goods have been actually exported and have not been re imported and are not intended to be re imported at any Customs port and that such person was at the time of entry onwards and shipment and continues to be entitled to drawback thereon.

Merchandise Marks.—Importers into India especially from countries other than the United Kingdom would do well to make themselves acquainted with the law and regulations relating to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Mark Act, 1889 and connected Acts and the notifications issued there under. The following summary of the regulations in force does not claim to be exhaustive. For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Life-time offences may be classified conveniently under four heads —

- 1 Counterfeit trade marks,
- 2 Trade descriptions that are false in respect of the country of origin,
- 3 Trade descriptions that are false in other respects, and
- 4 Lengths not properly stamped on piece goods.

NOTE 1.—In the expression *ad valorem* used in these Schedules the reference is to 'real value' as defined in section 80 of the Sea Customs Act, 1878 (VIII of 1878) unless an article has a tariff value assigned to it.

NOTE 2.—Tariff valued heads are based on the ordinary trade description of each article and cover all reduced grades and mixtures unless they are separately provided for.

NOTE 3.—In this publication the expression 'standard rate of duty' means in the case of articles included in Parts VIII and IX of the Statutory Tariff, the standard rate of duty as opposed to the preferential rate, and in the case of other articles the ordinary rate of duty including surcharges, if any.

The following details of the Indian Customs Tariff are published by Courtesy of the Government of India

Finance.

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. Those who take a broad view of the history of Federal States—and by whatever name it may be called India must in its political structure be a Federal State—nothing is more impressive than the ebb and flow in what may be called the adjustment of Federal and State rights. There is a constant variation in the powers of the central government and the federal components though in India we use the terms "Government of India and Provincial Governments" to describe them. In the earliest days of British rule, the Provinces, and especially the older Presidencies were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India was all powerful controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found too heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term contracts with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first might seem inequitable, but which had its definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were an open sore, each Province claiming that it paid an undue proportion of the total contribution and that it was starved in consequence. There was no possibility of adjusting these differences, as the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1928-29.

But this did not end the discussion, indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure, like those on education and sanitation which bulk largely in Provincial budgets. The burden is heaviest in the industrial provinces, such as Bombay and Bengal. The standard of living is high, wages and costs are a good deal above those of the agricultural provinces. This means an expensive administration. On the other hand the industrial progress which induces this costlier administration pours all its taxable product into the coffers of the Government of India. Rules made to give Bombay and Bengal some share in the Income Tax receipts have been inoperative in practice. Whilst therefore relief is felt at the abolition of the Provincial Contributions under the 1919 settlement, it is felt that this does not go far enough, and there is still this pressure for some share in the revenues from the taxes on income which it is believed, alone can put the industrial Provinces on a satisfactory basis.

The financial organisation was, of course, reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review is said to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as to right their finances the committee suggested spreading the charge over the other Provinces by giving them back less in income tax than they were entitled to.

Regarding possible new sources of revenue Federal or Provincial, the Federal Finance Committee reported as follows —

Federal

Excise on Tobacco.—The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of vend licenses and fees, but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small establishments and even as a domestic industry. Vend licenses and fees can obviously be imposed only by the Governments of the Units and their imposition by the Provincial Governments is now being encouraged by the Government of India. The difficulties in the way of a federal excise may be overcome in course of time but it would be unsafe for us to rely on this in the near future.

Excise on Matches.—The imposition of an excise duty on matches is already under active consideration, and we feel justified in contemplating the existence of such a duty from the outset of federation. We are advised that the probable net yield of the tax for all India at a reasonable rate, with due allowance for reduced consumption, would be about 3 crores, of which at least 2 to 3 crores would be raised in British India.

Other Excises.—It is possible that other excise duties may occupy an important place in the fiscal policy of India in the future but we do not feel warranted in relying upon the introduction of such measures in the early years of federation.

Monopolies.—We have examined the suggestion, made at the Round Table Conference, that federal revenues should be augmented by a few selected monopolies. From the fiscal point of view it is only in very special circumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of raising revenue. Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly method could be applied with advantage. The manufacture of arms and explosives, which has been suggested as a possible monopoly, is already subject to license. Public utility monopolies stand on rather a different footing but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely problematical.

Commercial Stamps.—In the Peel Report it was observed that "There is much to be said for federalising Commercial Stamps on the lines of various proposals made in the past," but no definite recommendation was made. We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure.

The yield of certain stamp duties which might be placed in this category was, in 1930-31, slightly more than one crore. This was a sub-normal year and the normal yield should be somewhat higher. In 1930-31 about 40 per cent of the yield was received by Bombay (one-eighth of this being attributable to Sind), 27 per cent by Bengal and 12 per cent by Madras. The loss of revenue resulting from the federalisation of these duties would therefore be unevenly distributed, and their federalisation would not ease the problem of distributing income tax.

Further there are obvious difficulties in the way of separating stamp duties into two classes, commercial and non-commercial. It could only be done by means of a schedule and a large element of purely arbitrary selection would be involved. The simple constitutional solution would be to class all stamp duties as provincial sources of revenue.

We have given some attention to the question, considered by the Federal Structure Committee whether the Provincial Governments should be given power also to fix the rates of duty on all stamps or whether legislation on this subject should be reserved, wholly or partially to the Federal Government. We suggest that the Federal Government should retain the power to legislate on behalf of the Provinces in regard to those stamp duties which are the subject of legislation by the Central Government at the date of federation. The duties which are now the subject of central legislation are those on acknowledgments, bills of exchange, promissory notes, cheques (not now dutiable), delivery orders in respect of goods, letters of allotment of shares, letters of credit, insurance policies, promissory notes, proxies, receipts and shipping orders. We understand that proposals have been under consideration for adding other duties to this list and would suggest that, if any such additions are contemplated that should be made before the establishment of the Federation.

We ought to add, in this connection that difficulties already arise in estimating the share of each Province in the proceeds from the sale of postage stamps for use on taxed documents; and these difficulties may be expected to lead to considerable friction with the Provincial Governments unless a more satisfactory system can be devised.

Finally, in proposing that the proceeds of commercial stamps should be assigned to the Units we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not, however, wish to prejudice the possibility that as part of the general federation settlement with the States, it might be found desirable to include these duties among the sources of federal revenue. This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax.—From the financial point of view, it seems clear that if a corporation tax were imposed on companies registered in the States on the same basis as the present apex tax on companies in British India, the yield at present would be negligible.

Provincial.

Taxation of Tobacco.—We have already dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture should rest with the Units but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that *ex Approcheri* the introduction of excise duties on manufacture will be difficult if not impossible until manufacture becomes more highly industrialised, and as that development takes place an excise levied at the factory by one Unit of the Federation would be a tax on consumers in other Units. It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units, if it so desired.

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature but eventually they may be expected to form at least a very useful additional source of provincial revenue.

Succession Duties.—Bombay is we believe the only Provincial Government which has attempted legislation for the imposition of succession duties and the attempt was unsuccessful. We understand that even that Government would have preferred that legislation should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units, but clearly the facts would not justify reliance on them as a source of revenue in the near future.

Terminal Taxes.—We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces. As the arguments for and against this proposal have been so fully set forth in previous reports, it scarcely seems necessary to re-state them here. The feature of such taxation which has impressed us most seriously is its operation as, in effect, a surcharge on railway freights. Where municipal octrois are in force, there appears to be a tendency to substitute for the general levy of dues on all goods entering the municipal boundaries the simpler alternative of a terminal tax collected at the railway station and there is already a danger that this habit may result in diversion of traffic to the roads. We therefore recommend that, if terminal taxes are to be regarded as a permanent part of the financial structure, they should be imposed by the Federal Legislature for the benefit of the Units. Such terminal taxes as are already in existence (mainly as municipal taxes) will fall into much the same category as other taxes classed as

federal which, at the time of federation are being levied by certain Units, but though it may be necessary for this reason to authorise the municipalities and Provinces concerned to continue to raise these taxes, they should be allowed to do so only within limits laid down by the Federal Legislature. Assam and Bihar and Orissa are the two Provinces which, having few or no municipal taxes of the kind at present, are most desirous of deriving provincial revenue from this source. While we do not rule out the possibility of terminal taxes in these two Provinces and elsewhere as a temporary expedient, in view of the practice which has grown up in various parts of India we are not prepared to regard terminal taxes as a normal source of revenue.

Taxation of Agricultural Income.—We have not considered the broad issues of policy involved in the taxation of agricultural incomes, but we have considered as we were commissioned to do, the more limited question of the possibility of empowering individual Provinces, if they so desire to raise or appropriate the proceeds of a tax on agricultural incomes. In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the taxation of income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income-tax law and practice.

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption and the rate of taxation to which he is liable on either section of his income, and we doubt whether any provision need be inserted in the constitution on this point since we are advised that in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to taxation by it except with the consent and co-operation of the other Government.

We are aware of no reliable data for estimating the yield of such taxation.

Conclusions.—In this survey of possible sources of additional revenue, we have deliberately left out of account the question whether or to what extent it would be possible to increase the yield of existing taxes. We have confined ourselves to an examination of new sources, and in this field the results of our survey are not encouraging. We have found that such provincial taxes as appear to be within the sphere of practical policies in the immediate future cannot be relied on to yield any substantial early addition to provincial revenues. In using the phrase 'practical policies,' we are not, of course, expressing an opinion as to whether this or that tax ought or ought not to be imposed, or even as to whether it is or is not likely to be imposed by the legislatures of autonomous Provinces when these are constituted. We are only noting the fact that the opposition to certain forms of taxation, or the difficulty of their imposition,

is still so great that they are not likely to be adopted soon enough to influence the financial situation at the time when the Federation comes into being. In the federal sphere the excise on matches is the only tax which we are justified in taking into account as an immediate reinforcement of federal revenues.

Railway Finance.—The year 1924-25 was marked by a step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (p. v) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways. It is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this

policy were forcibly exposed in the report of a strong committee of investigation, usually called after the name of its chairman, the Acworth Committee, which recommended the entire separation of the Railway Budget from the general finances. Some delay occurred in giving effect to this recommendation, but it was carried out in the year 1924-25. The bases of the settlement were complete separation of finance, a definite annual contribution from the railway revenues to the general revenues, and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent on the capital at charge, plus one-fifth of the surplus profits further, if after the payment of the contribution so fixed the amount available for transfer to Railway Reserves exceeds the sum of Rs. 3 crores, one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgeting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

I RECENT INDIAN FINANCE

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's balance sheet. Up to the outbreak of the war it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of windfalls going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 31 crores of rupees. For was this all? Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it, the effect of this attack was to set a large part of the North-West Frontier Province and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This, especially in the notoriously troublesome country of Waziristan (p. v Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts, even in the years of famine and plague. The result was that the accumulated deficits of the Government of

India reached the very high figure of Rs. 100 crores. This led to two results.

Retrenchment and Taxation.—Owing to the insistent demand for retrenchment the Government of India appointed in 1922 a retrenchment committee on the model of the Geddes Committee which overhauled the extravagant post-war expenditure of the British Government. This committee is generally called after its chairman, the Inchope Committee. It met in 1923 and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs. 18 crores.

Financial equilibrium was established and a surplus realised in the Budget of 1923-24.

Statement comparing the actual Revenue and Expenditure of the Central Government since 1921-22

In lakhs of Rupees

Year	Revenue	Expenditure	Surplus (+) Deficit (—)
1921-22	1,15.21	1 38 40	—27.65
1922-23	1,21.41	1 41 59	—15.18

(Budget)			

(a) Whole surplus placed to provision for reduction or avoidance of debt.

II. THE PRESENT FINANCIAL POSITION

The year 1929-30 marked a considerable change in the finances of the Government of India, synchronising with a change in the control of this Department. When Sir Basil Blackett took charge of the finances in 1922-23, the position was difficult. The war deficits had not been worked off and the provincial contributions hung like a millstone round the organisation. He was therefore driven to agree to the doubled salt duty which brought serious political troubles in its train. But thereafter the position improved. The next five years may be said to have been a period of comparative ease. Recurrent surpluses allowed the gradual extinction of the provincial contributions, the doubling of the salt tax was reversed, and a period of constructive work set in. The main features of this period were a great improvement in the technique of the financial organisation and a great expansion in capital expenditure without any proportionate increase in the total debt. But this was accomplished only by drawing heavily on the balances of the Government, and postponing the payment of, or not providing for the payment of the interest on the Post Office Savings Certificates which in India take the place of the National Savings Certificates in Great Britain. This was the position when Sir George Schuster taking office as Finance Member, presented his first Budget in February 1929.

Actually the financial year 1928-29 when provincial contributions to the Central Exchequer ceased, closed with an uncovered deficit of Rs. 32 lakhs after the whole of the balance to the credit of the Revenue Reserve Fund had been drawn upon. Nevertheless the Finance Member was able to present another balanced Budget without increasing taxation and aided by a windfall, the bringing into account of a large sum held by India at credit of the German Liquidation Account under the Treaty of Versailles the year 1929-30 closed with an even balance. By a curious coincidence the amount received by the Government of India as the result of the decisions arrived at by The Hague Conference was Rs. 156 lakhs, and exactly balanced the deficit which would otherwise have arisen.

The Budget of 1930-31—From the foregoing it will be seen that the strain caused by the remission of provincial contributions was proving too much for the Government of India's finances. The Finance Member did not increase taxation in the 1929-30 Budget because he wished to see if the revenues would naturally increase sufficiently to bridge the gap. They did not, and as we have already noted, he would have found himself with a deficit of Rs. 156 lakhs but it is not for the Reparations windfall. But when he came to present the Budget for 1930-31 the unsatisfactory state of the country's revenues had to be squarely faced. In submitting the estimates for the year Sir George Schuster said he had to take into account several unfortunate factors including the civil

disobedience campaign threatened by the All India Congress, the serious blow given to confidence by talk of repudiation of debts in the resolutions passed by the Congress at its Lahore session, and the not very bright prospects of world trade. The net result was that, so far as the main heads of revenue were concerned a net growth of no more than Rs. 5 lakhs was anticipated. On the other side of the shield the Finance Member said he had to provide for deterioration in the main Commercial Departments: Railways and Posts and Telegraphs to the extent of Rs. 90 lakhs; essential new services and demands Rs. 148 lakhs; net addition to interest on deadweight debt, Rs. 107 lakhs; special provision for bonus on Post Office cash certificates Rs. 88 lakhs; increase in provision for reduction of avoidance of debt Rs. 27 lakhs. Budget deficit of 1929-30 Rs. 30 lakhs; total Rs. 567 lakhs. Deducting Rs. 5 lakhs due to the net improvement in revenue there was thus a gap to be filled of Rs. 562 lakhs. The Finance Member proposed reductions in the civil estimates and in military expenditure amounting in all to Rs. 142 lakhs, leaving a deficit of Rs. 410 lakhs. To meet this deficit the following items of new taxation were announced—

Excise duty on kerosene raised from one anna to one anna six pies, import duty reduced from two annas six pies to two annas three pies. Estimated yield Rs. 35 lakhs.

Import duty on sugar raised by Rs. 1½ per cent. Estimated yield Rs. 180 lakhs.

Duty of four annas per ounce on silver. Estimated yield Rs. 100 lakhs.

Duty on cotton piecegoods raised from 11 to 15 per cent with an additional duty of 5 per cent to be levied on non-British cotton goods for which a separate Tariff Bill would be introduced. Estimated yield Rs. 126 lakhs.

The total yield from the new taxes was estimated at Rs. 510 lakhs but as it was proposed to reduce the import duty on rice by one-quarter, the Budget estimates anticipated a surplus of Rs. 70 lakhs.

Assembly and Preference—The proposal to raise the import duty on cotton piecegoods consisted of two parts. The first was the raising of the import duty on all cotton goods from 11 to 15 per cent *ad valorem* for revenue purposes. This was effected in the Finance Bill by a change in the Import Tariff. To provide the special additional protection a separate Cotton Textile Industry (Protection) Bill was introduced by the Commerce Member. It provided for the imposition, for protective purposes, of an additional 5 per cent. *ad valorem* import duty, with a minimum of 2½ annas a pound on plain grey goods, on all cotton piecegoods from outside the United Kingdom, this protective duty to be in force for three years only and an undertaking to be given that its effects should be examined by the Tariff Board before the end of the

Triennialism. The differentiation in favour of Great Britain was adopted as a convenient means of classification for the purpose in view which was to impose a protective duty on goods competing with Indian mill products and to leave those goods not competing with them. To have imposed the new duty on all goods would have been to lay a heavy burden on the consumer without producing a particle of benefit for the Indian manufacturer. Political extremists vehemently opposed the protective differential duty because it nominally gave advantage to Great Britain and put forward an amendment to make it applicable to all imported piece-goods. Government declined to make the change in their proposals on the ground that a general duty would impose a colossal further burden on the consumer without serving any useful purpose. Government on the other hand accepted an amendment from Moderate political critics, abolishing the differentiation in so far as it affected plain grey goods in regard to which there was shown to be competition between British and Indian mills. This amendment the Assembly adopted by 52 votes to 43 in preference to the extremist amendment. The Bill was also passed by the Council of State. The Assembly made only one substantial cut in the appropriation grants demanded by Government. That was the reduction of the grant required for the Army Department from Rs 54,000 to one rupee. When the remaining grant for one rupee was submitted to the House the President declared that he heard none about it, and that therefore that also was cut. The grant was restored by the Governor General. The annual Finance Bill was passed without serious amendment.

The 1931-32 Budgets.—India, in common with other countries of the world, felt the full force of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing fresh taxation proposals in September. When Sir George Schuster faced the Legislative Assembly at the end of February, he had a sorry tale to tell. Trade depression, coupled with civil disobedience movement, had completely vitiated the estimates made for 1930-31. These estimates showed a surplus of Rs 86 lakhs, the revised estimates worked up to a deficit of Rs 18 55 crores, which the Finance Member said would remain uncovered and would be added to the unproductive debt. The main items of deterioration as compared with the Budget can be summarised as follows:—

	Lakhs
Important revenue heads, viz., Customs, Taxes on Income, Salt and Opium (net)	12,10
Posts and Telegraphs (including the Indo-European Telegraph Department)	89
Finance headings, viz., Debt service, Currency and Mint	1,38
Other heads	8
Total Rs	14,42

Turning to the estimates for 1931-32, the Finance Member said they must face a fall in tax revenue, as compared with the current Budget estimates, of no less than Rs 12 16 crores, including a drop of Rs 6 crores in Customs and 4½ crores in income tax. The total deterioration under Finance headings was Rs 37½ lakhs and on commercial departments Rs 118 lakhs. This meant a total deterioration of Rs 12 10 crores as compared with the Budget estimates for the current year, and as those provided for a surplus of Rs 86 lakhs the net deficit would be Rs 17 24 crores. To meet this deficit the Finance Member announced a cut of Rs 17½ lakhs in army expenditure and retrenchment to the extent of Rs 98 lakhs in civil expenditure, making a total saving of Rs 278 lakhs. The estimated deficit was reduced thereby to Rs 14 51 crores which he proposed to cover by fresh taxation.

New Taxation Proposals.—His proposals were grouped under two heads, Customs and Income Tax. Referring to the first the Finance Member said. The heads in respect of which I propose alterations of the substantive tariff itself are liquors, sugar, silver bullion, betelnuts, spices and exposed cinematograph films. The liquor duties are to be enhanced appreciably, the duty on beer and the like is at present undoubtedly low relatively to those on other alcoholic beverages and will be raised by about 66 per cent above the present level, while those on wines and spirits (except denatured spirit and spirit used in drugs and medicines) will be raised by between 30 and 40 per cent. The duty on silver bullion I propose to increase from 4 to 8 annas per ounce. The other items mentioned will be transferred from the general rate of duty (now 15 per cent ad valorem) to the 'luxury' rate at 80 per cent. Of the surcharges, we have at a stroke added to the 10 per cent schedule a surcharge of 2½ per cent, to the general or 15 per cent schedule one of 5 per cent, and to the 'luxury' or 30 per cent schedule one of 10 per cent. By far the most important of these surcharges is that 5 per cent on the general revenue schedule of 15 per cent, and connected with this, I must mention a feature of particular importance. We propose for this purpose to treat the basic duty of 15 per cent on cotton piece-goods on the same lines as the general 15 per cent schedule and to place the surcharge of 5 per cent on these goods also. The surcharge on the 15 per cent schedule is expected to yield 90 lakhs for cotton piece-goods and 2,63 lakhs for other goods. Coming now to the schedule of non-protective special duties here we have made additions appropriate to the general scheme, and I need only mention specially the surcharges that I propose to levy upon kerosene and motor spirit. Both kerosene and excise duty on kerosene are to be raised by 9 pice per gallon, while motor spirit is to bear a surcharge of 2 annas per gallon. Finally, I must explain my proposals as regards sugar. The position is special, because, while I am now proposing an increase in the duty for revenue purposes, we had received, just when my budget proposals were on the point of completion, the recommendations of the Tariff Board for

the protection of sugar. Summarised, the Board's recommendations are—(1) a basic duty of Rs 4-4-0 per cwt on all classes of sugar, including sugar candy, to be imposed for 15 years, (2) an additional duty of Rs 1 per cwt on all classes of sugar to be imposed for the first 7 years, (3) power to be taken to add 8 annas per cwt to the duty at any time if the landed price of sugar at Calcutta ex-duty falls below Rs 4 per maund, (4) no protective duty on molasses. My own proposals for revenue purposes had been very close to this for I had actually contemplated an extra duty round about Rs. 1 to Rs 1-8-0 per cwt. What I have now included is an increase of Rs 1-4-0 per cwt. on all grades of sugar. This, as I have said, must be regarded purely as a revenue measure pending consideration of the Tariff Board's recommendations. The combined effect of all these proposals as regards Custom duties will be to produce an additional revenue next year of 9 82 crores. We shall also obtain about 50 lakhs more from the increased import duties on galvanized pipes and sheets which the House discussed on 28th January last. This will raise the additional yield to 9 82 crores. Incidentally, the new duties, which will operate from 1st March, and the increased duties on galvanized pipes and sheets, which came into force on 30th December, will add to our revenue for the current year a sum estimated at 88 lakhs, thus reducing the current year's deficit to 12 88 crores.

Increased Income Tax.—Dealing with his proposed new tax on incomes, the Finance Member said. The taxable minimum income for income-tax—Rs 2,000—will not be lowered. The rate of tax on the lowest zone up to Rs 4,999 will be raised by 4 pias. The rates on higher grades up to Rs 49,999 will be raised in some cases by 5 pias, in some cases by 6 pias, and in the highest of these grades by 7 pias. At present the highest rate is reached at Rs 40,000. It is now 19 pias. I propose a rate of 25 pias on incomes from Rs 40,000 to Rs 99,999, and a maximum rate of 26 pias on incomes of Rs 1 lakh and over. The estimated yield of these increases is 5.07 lakhs gross or, deducting 88 lakhs on account of increased refunds, 4.54 lakhs net. In addition to this, I propose certain changes as regards super-tax. At present all assesses except Hindu undivided families are allowed a deduction of Rs 50,000 in computing the income liable to super-tax. This will be lowered to Rs 30,000 except for Hindu undivided families and companies, which will be allowed, as at present, a deduction of Rs 75,000 and Rs 50,000 respectively. In the new zone, Rs 20,000 to Rs 50,000 the super-tax rate will be 9 pias. Above Rs 50,000 the graduated scales will be increased by 2 pias throughout. The flat rate for companies will be 1 anna as at present. These changes will yield, it is estimated, 46 lakhs. Thus the total estimated additional net revenue from taxes on income will be 5 crores. Briefly they will add an extra charge of about 3 to 5 per cent on all incomes. The rates of additional tax have been so adjusted as to produce, in the final result, an evenly graduated scale of burden increasing as the income increases, and this object must be borne in mind in interpreting our proposals. The

total yield from the proposed changes in Customs duties and taxes on income thus amounts to Rs. 14 82 crores, as against which the gap to be filled is Rs. 14.51 crores, so that I am left with a small surplus of Rs. 31 lakhs.

Silver Duty.—Referring to silver, the Finance Member said—It is necessary for me to make a special reference to the proposed increase in the tax on silver because this has a general bearing on the whole question of our policy in relation to silver and its effect on the world position. The increase of two annas an ounce which we are proposing is estimated to produce 78 lakhs from the import duty and 7 lakhs from the excise or 85 lakhs in all. In itself it is a clearly justifiable form of raising revenue as part of the general plan designed to meet the situation which confronts us this year. The only possible objection to it might be based on broad grounds, that is to say, on a fear that it might tend to check consumption of silver in India and thus further weaken the price of silver to the disadvantage not only of India but of the whole world. We have given the fullest weight to this consideration, but with the very moderate increase in the duty which we now propose we do not think that the fear is justified. Similar apprehensions were expressed in certain quarters last year when we imposed the duty of 4 annas. But although this weakened the price for a few days, the market almost immediately recovered, and in spite of the duty and of the great decline of India's purchasing power, the consumption of silver in the current year is keeping up to the normal level. In fact, we anticipate a consumption taking all sources of supply into account, of between 100 and 110 million ounces. India's consumption should not therefore this year be seriously affected by the increased duty, while as regards helping to maintain the price of silver, we are prepared to consider action in other ways. I announced in my budget speech last year that the Government of India would be prepared to co-operate with other silver interests if any practical scheme could be devised for controlling the production of new silver and the sale of and new existing stocks. Unfortunately, the only response to my offer has been on the lines indicated in certain utterances which have appeared in the press by representatives of the main producing interests in America. In general, these gentlemen propose that their own production of new silver should remain unrestricted, but that Governments and others who hold large stocks of silver should refrain from realizing their holdings, and leave the world's markets free for the new production. Now, whatever criticisms non-official members in this House may have made in the past on our policy of selling silver, I am sure that they would not expect the Government of India to part with the country's rights by acceding to any such one-sided arrangement. The demand that the Government of India should refrain from selling is, indeed, an astonishing proposition when the facts are studied. For, in fact, the whole world depends on India as a consumer. In the five years ending March 31, 1930, India absorbed about 540 million ounces of silver or 108 million ounces per annum. According to present indications her absorption,

even in the current year, will be up to this average, so that the total absorption in 6 years will be about 650 million ounces. As against this, the Government of India have sold out of their own holdings a total of only about 90 million ounces since 1926. Yet it is suggested that even this moderate realisation is to stop, and that India is to stand aside and keep her

own home market free to absorb the production from the Mines of Mexico and the United States. This is a clearly unacceptable idea, and however anxious we may be—as indeed we are—to help, we must, as a condition of co-operation, secure fair consideration of India's interests. In the meanwhile, we must retain a free hand

WAYS AND MEANS.

The Ways and Means position was explained as follows in the 1933-34 Budget speech

(In crores of rupees)			(In crores of rupees)		
Budget, Revised, 1932-33 1932-33			Budget, Revised, 1932-33 1932-33

Reception by the Assembly.—Strong opposition was manifested in the Assembly to the new income tax and super tax rates, and on the plea that Government's duty was to retrench expenditure still further an amendment was passed reducing the proposed revenue from this source by Rs 240 lakhs. Government found themselves unable to accept this cut, and the Finance Bill was returned to the Assembly

by the Governor General with the recommendation that it should be passed with an amendment to the Finance Member's original scheme involving a reduction in the lowest grades of income tax and leaving the higher grades untouched. The estimated decrease in revenue was about a crore of rupees compared with nearly two and a half crores created by the Assembly's vote. The following were the rates recommended by the Governor-General.—

In the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or a company —

	Rate
When the total income is less than Rs 2,000	Nil
When the total income is Rs 2,000 or upwards, but is less than Rs 5,000	Six ples in the rupee
When the total income is Rs 5,000 or upwards but is less than Rs 10,000	Nine ples in the rupee
When the total income is Rs 10,000 or upwards, but is less than Rs 15,000	One anna in the rupee
When the total income is Rs 15,000 or upwards, but is less than Rs 20,000	One anna and four ples in the rupee
When the total income is Rs 20,000 or upwards, but is less than Rs 30,000	One anna and seven ples in the rupee
When the total income is Rs 30,000 or upwards, but is less than Rs 40,000	One anna and eleven ples in the rupee
When the total income is Rs 40,000 or upwards but is less than Rs 1,00,000	Two annas and one ple in the rupee
When the total income is Rs 1,00,000 or upwards	Two annas and two ples in the rupee
In the case of every company and registered firm whatever its total income	Two annas and two ples in the rupee.

The Bill in its recommended form was, however, rejected by the Assembly by 60 votes to 56, and was sent to the Council of State where it was passed. It became law on being certified by the Governor General. The gap of Rs 105 lakhs caused by the amended income tax figures was partly filled by reduction of military expenditure to the extent of Rs 60 lakhs and by Rs 15 lakhs cut in civil expenditure.

Other cuts made by the Assembly and accepted by Government included token reductions of Rs 100 in the demands for Customs, Income Tax, Executive Council and Army Department. Two cuts of Rs one lakh and Rs 100 were made in the Railway Board demand and were accepted.

Supplementary Budget.—It soon became evident that the worsening of the trade depression had seriously vitiated the revenue estimates in the February budget, and in September Sir George Schuster came before the Legislative Assembly

with a Supplementary Finance Bill. The Finance Member said that the returns for the first five months indicated that they would fall short of their budget estimates for customs by at least Rs 10 crores, the heaviest reductions being under cotton piece-goods, sugar, silver, spirits and liquor, excise on motor spirit, iron and steel and in the jute export duty, while they expected a deficit of Rs. 1½ crores on income-tax. Income from Railways and Posts and Telegraphs showed a similar decline. The total deterioration in income amounted to Rs. 11.33 crores in tax revenue, Rs. 5.48 crores on commercial department, Rs. 2.28 crores in general finance headings, Rs. 33 lakhs under extraordinary receipts and Rs. 33 lakhs under other heads. As the budget provided for a small surplus of Rs. 1 lakh on the basis of the present estimates there would be a net deficit of Rs. 19.55 crores. Putting the deficit for the current year and next year together they had a gap to fill of Rs. 39.05 crores. He proposed

to deal with the situation on three distinct lines, firstly, to reduce expenditure; secondly, to impose an emergency out in salaries, and thirdly, to impose fresh taxation. Retrenchment measures in civil expenditure he estimated would save about Rs.80 lakhs in the current year, and Rs.250 lakhs next year, while military expenditure next year would be curtailed by Rs.450 lakhs. A ten per cent out in pay in both civil and military departments would lead to a saving of Rs. 60 lakhs in the current year and Rs.190 lakhs next year. Turning to new methods of raising revenue the Finance Member said his first proposal would be an immediate increase in the salt revenue by abolishing the credit system, which would mean that the revenue would be increased by a crore of rupees each year on this account. The main plank of his new taxation proposals was to put a temporary surcharge on all existing taxes with the exception of Customs export duties, the surcharge being 25 per cent on the existing rates in each case. He proposed that the surcharge for the current year in income-tax should only be 12½ per cent, but it would be collected at this rate on the whole year's income. Government held that in the present emergency they were justified in reducing the income-tax exemption limit and imposing a small tax of four pias in the rupee on incomes between Rs. 1,000 and Rs.2,000 per annum. Dealing with special increases and new taxes, the Finance Member said: "We propose to increase the import duty on artificial silk piece-goods from 20 to 40 per cent, and on artificial silk yarn from 10 per cent. to 15 per cent. We also propose to increase the duty on brown sugar from Rs.6-12-0 to Rs.7-4-0 per cwt. This follows the Tariff Board's recommendation. As regards boots and shoes, we propose that there should be imposed as an alternative to the 20 per cent duty a minimum of 4 annas per pair. The duty will thus be 20 per cent. or 4 annas a pair, whichever is the higher. We also propose to increase the duty on camphor and on electric bulbs from 20 to 40 per cent. As regards all these articles the surcharge will be levied on the increased duty.

"Then there are three items formerly on the free list on which we think it justifiable to impose a small duty on revenue grounds. The result of the surcharges imposed in last Budget and proposed now is that the level of the general revenue tariff has been increased from 15 to 25 per cent. There is, therefore some justification for adding a 10 per cent. duty to articles hitherto free. We propose to put duties of 10 per cent. on machinery and dyes, and of 5 annas per lb on raw cotton. I must expect criticism of these duties especially from the cotton mills, and I must acknowledge that their imposition may appear to be in some ways inconsistent with previous policy. The justification must be the need for revenue, while as regards the cotton mills we may claim that on balance their position will be improved by our surcharge proposals, for under these the import duties on cotton piece-goods will be increased by one quarter. This more than offsets the burden of 5 annas per lb on goods made from imported cotton, and affords an effective answer to possible criticisms on the grounds to which I have referred. I have one more word to say as regards the income-tax proposals. In conducting the out to be applied to the salaries

of Government officials we considered what total reduction of their emoluments could fairly be imposed. If the general rate of reduction is to be 10 per cent., that represents what we think fair, and further increases of income-tax were to be added, that would go beyond the reasonable limit. We therefore propose that increases of income-tax both by way of surcharge on existing rates or by way of imposition of a tax for the first time on salaries from Rs.1,000 to Rs.3,000 should be merged in any general out which we are imposing or which the Provincial Governments may impose.

The Finance Member's final proposal was to increase the postage for inland letters to 1½ annas instead of 1 anna and for postcards to 9 pias instead of 6 pias. That enhancement was expected to produce Rs.78 lakhs in a full year and go a long way to cover the deficit of Rs.82 lakhs in the working results of the Posts and Telegraphs Department which would be left even if the recommendations of the Posts and Telegraphs Accounts Inquiry Committee were accepted.

Need for Solvency—The net result for the current year was an estimated increase in taxation of Rs.711 lakhs which, together with Rs.27 lakhs from increased postal charges and Rs.100 lakhs from salt revenue, meant, with retrenchment measures, an improvement of Rs.828 lakhs as against an estimated deficit of Rs.19,45 crores. They would thus close the year with a deficit of Rs.10.17 crores. On the other hand, in 1932-33 they would feel the full benefit of the retrenchment measures and the extra taxation, making a total improvement of Rs.84.72 crores against an estimated deficit of Rs.19.50 crores. They should thus close the year with a surplus of Rs.5.33 crores. The combined result of the two years would be a deficit of Rs.4.94 crores, which they were justified in regarding as covered by making during this period of exceptional stress a reduction of about Rs.2.47 lakhs in each year for the provision for redemption or avoidance of debt. The net administrative expenditure would, according to their plans, proceed as follows —

1930-31	Rs.79.97 crores.
1931-32	Rs.74.66 crores.
1932-33	Rs.55.94 crores.

Concluding his speech Sir George Schuster said: "I referred at the outset of my speech to the danger, now that we are divorced from a gold standard, of any inflationary action for the purposes of meeting the current expenditure of the Government. If once that process starts, it may be impossible to save the country from a complete collapse of its currency. That has been the experience of all countries whose currencies collapsed after the War. They all went through the same process. Budgetary deficits, met first by borrowing, then a renaissance of the public to subscribe to government loans or treasury bills, then recourse to the note-printing press and inflation to provide funds to meet current public

expenditure then collapse in confidence in the currency, notes printed faster and faster until the amounts reached astronomical figures, and finally the complete disappearance of any value to the currency itself. We want to erect a solid barrier against the possibility of India getting on to that slippery slope. That is the essential justification for our proposals. We have heard much talk in the last days about the disappearance of our currency reserves. But no currency can be large enough to stand up against a lack of confidence in the currency. Reserves are only valuable to tide over temporary difficulties. The real safeguard must be confidence in the soundness of a country's financial situation. If a country meets current expenditure with current revenue, and if further, it has a favourable balance of trade, then it can face all the vicissitudes of fortune with confidence and its actual currency reserves are of minor importance.

Assembly Opposition.—The Finance Member's statement and fresh taxation proposals came as a shock to the Assembly and strong opposition to certain sections of the Bill was manifested from the start. Most of the non-official members maintained that larger cuts in expenditure should be made, instancing the need for still further retrenchment in the Army demands. When the Bill was discussed clause by clause a motion was carried placing mill machinery etc. again on the free import list and the proposal to increase postal rates was rejected. Amendments to the income tax increases were carried omitting the reduction of the minimum taxable income from Rs 2,000 to Rs 1,000, and making the 25 per cent surcharge levied during 1932-33 applicable only to incomes over Rs 10,000 per annum. When the discussion finished the Bill was returned to the Assembly with a recommendation by the Governor-General that it should be passed in its original form. Lord Willingdon pointed out that the amendments made by the Assembly would reduce the expected revenue by Rs. 4 crores over eighteen months and added, "I am satisfied that I cannot consistently with my responsibilities allow this deficiency to remain uncovered." The Bill as amended was, however, rejected by the Assembly by 68 votes to 48. It was taken to the Council of State where it was passed and was thereafter certified as law by the Governor-General.

The 1932-33 Budget.—Presenting the 1932-33 budget on March 7th, 1932, the Finance Member explained that the circumstances were somewhat unusual. The supplementary budget had been introduced only six months earlier. He did not, therefore, propose to ask the House at the present stage to approve any extensions or modifications of the plan for raising revenue put forward in September 1931. On the basis of the supplementary budget in September it was hoped to reduce the deficit for the current year to Rs. 10 1/2 crores and for the following year to realise a surplus of Rs. 523 lakhs but experience had made it necessary to revise these estimates. A deterioration in the figures by about Rs. 8 crores was to be allowed for each year and it was anticipated that the current

year would close with a deficit of Rs. 13 5 crores and that the surplus for 1933-34 would be Rs 2 15 crores. The Finance Member reminded the House that for the current year and the next year combined no less than Rs. 13 71 crores was being provided from revenue for reduction or avoidance of debt.

Revenue Estimates.—The budget estimates for customs receipts in 1932-33 were put at Rs 415 lakhs less than in the previous year in spite of the increased duties imposed by the emergency budget and which were expected to bring in an additional revenue of Rs 64 crores. The main deterioration occurred under the heads of sugar, silver, cotton piecegoods and liquors. Referring to the revenue from the commercial departments the Finance Member said that no contributions from the railways were expected either in the current year or the next. As regards Posts and Telegraphs the loss in working in the coming year was expected to be about Rs. 16 lakhs.

Expenditure Estimates.—The total civil and net military expenditure in 1932-33 was estimated at Rs 87 59 lakhs which was Rs 11 84 lakhs less than for 1930-31 and Rs 796 lakhs less than the current budget. On the subject of retrenchment the Finance Member said:

For the present I would remind Honourable Members of the following broad facts, when they compare what we have achieved with the recommendations of the various Retrenchment Committees. The total recommended by the four civil Sub-Committees was Rs 4 90 lakhs, and we have against this achieved economies of Rs 4 32 lakhs or nearly 87 per cent.—before allowing for terminal charges which, of course, the committees did not take into account."

I would mention two other striking results in this connection. The first is the actual reduction in Expenditure I have already given the figures from the accounts showing a reduction of 11.84 lakhs for Civil and Military Expenditure (excluding Posts and Telegraphs) since 1930-31. The position may also be stated in another way. If Honourable Members will look at the analytical table which is included in the Financial Secretary's memorandum (which is prepared now on a slightly different basis from that which I circulated in September) they will find that what I may describe as the net controllable administrative expenditure, civil and military (which excludes the cost of collection of taxes and of the administration of salt and Posts and Telegraphs expenditure) has been brought down from just over Rs. 76 crores in 1930-31 to just over Rs. 64 crores for 1932-33, a reduction of about 16 per cent."

The second fact is of a more distressing nature, but it indicates the magnitude of the effect which we have made. In pursuance of the retrenchment campaign the following appointments in the Civil Departments (including Posts and Telegraphs) have been or will shortly some

under reduction so far as information is at present available—

Caserted officers	290
Ministerial establishment and other superior establishment	5 270
Inferior establishment	1 488
Total	7,068

Army Expenditure—On the subject of military expenditure the Finance Member said—

In September last I informed the House that His Excellency the Commander-in-Chief had agreed, as the Army's contribution in the national emergency to accept a cut of Rs 54 crores on his 1931-32 budget. I have now only to say that His Excellency has made good his undertaking in full, and that the estimate for the military budget in 1932-33 excluding again the special grant for the Territorial Force, stands at 48 65 crores.

Honourable Members will find among their budget documents an Army Department paper giving a detailed account of the methods by which this reduced figure has been reached. The total reduction which is raised to 54 crores to allow for certain unavoidable new items such as the establishment of the Indian Sandhurst, is made up of first 1 40 crores from cuts in pay, secondly, 3 10 crores from retrenchment measures in recurrent expenditure and thirdly, 1 crore from postponement of progress with the special re-equipment programme. It is necessary to appreciate the exact significance of these savings. To take the first—the cut in pay, this except for certain categories of British Army personnel (in regard to whom the reduction following what has been done in England is permanent), represents the general 10 per cent cut which we have imposed on all Government servants, and, as we have undertaken that this cut will be restored as soon as conditions permit most of this part of the reduction must be regarded as purely temporary. Turning to the second class, the retrenchment in recurrent expenditure, this to some extent is accounted for by special temporary savings, such as the eating down of stocks and postponement of essential buildings. As regards the third class, the postponement of the re-equipment programme, this cannot be regarded as permanently cancelled. It does, however represent special non-recurring expenditure, and when conditions permit it will be necessary to consider special means for financing the completion of this programme.

The significance of these remarks may be indicated in the following way. As regards the cut in pay, when the general cut of 10 per cent is removed this will automatically throw back on to the Army a recurrent liability of 1 23 lakhs—(1 40 less 17 which is a permanent cut). As regards the retrenchment in normal expen-

diture about 65 lakhs of this represents savings which are not in the strict sense recurrent. About 30 lakhs represents drafts on stocks, etc and 45 lakhs postponement of the provision for buildings which are regarded by the Army Department as essential. As regards the postponement of the re-equipment programme, the one crore saved on this for next year may have to be found later by some form of special non-recurring provision. The Army authorities have throughout made it clear that they have only agreed to postponement in order to help in meeting the present national emergency, and that the permanent cancellation of these measures could not—consistently with maintaining the efficiency of the Army—be effected.

“His Excellency the Commander-in-Chief has given an assurance that he will not relax his efforts to secure further reductions to recurrent expenditure both by pressing on with measures already accepted, and by developing any further lines that may present themselves, but he has made it clear that he does not see any hope of being able to find economies in normal expenditures that is to say economies from measures other than the reduction of fighting troops which raises quite different issues, which can go near to balancing the burden of 1 23 lakhs which would arise from restoring cuts in pay combined with the disappearance of the 65 lakhs of special savings on recurrent expenditure from next year. In support of this he points out that in spite of the intensive examination of all sources of economy both by his own officers and by the Retrenchment Committee it was only possible to work up to the present reduction of 54 crores by reducing troops at a saving of 35 lakhs. Further although provision has been made in the estimates for 1932-33 for some rise in the prices of food grains as compared with those prevailing in 1931-32, the rates now taken are still far below the recent normal level and, if prices should rise to and be stabilised at something like the 1929 level, this event though welcome on general grounds, would mean an automatic increase in the military estimates. On these considerations His Excellency wishes it to be made clear that he cannot regard the budget figure of 48 65 crores as representing a new standard level of standing charges and that the normal cost of the Forces at their present strength when the cut in pay is restored must be recognised to be about 48 crores even if the prevailing low prices for grain etc, continue. I have thought it right to let Honourable Members know the conclusions which His Excellency has drawn from the facts of the present situation and I can only add that the Government will continue to press for all possible efforts to secure further recurrent economies and that the campaign for retrenchment will not be regarded as finally closed with the achievements of this year.

The 1932-34 Budget.—In introducing the budget, the Finance Member summarised the results for the two previous years. The results for 1931-32 had turned out to be Rs. 2 crores better than anticipated in the budget speech and the account for the year showed a deficit after providing nearly Rs 7 crores for the reduction of debt of Rs 11½ crores. For the

year 1932-33 the latest revised estimates indicated that the surplus would be Rs. 217 lakhs or Rs. 2 lakhs more than was estimated. He continued to estimate revenue for 1933-34—particularly customs revenue—is in view of the completely uncertain and abnormal conditions, a task of quite unprecedented difficulty. Indeed I may say that accurate estimation is impossible in these circumstances and for the reasons which I have explained, we have thought that the most reasonable course is to assume that the general position next year will be the same as for the current year neither better nor worse and in particular that India will be able to maintain the same purchasing power for commodities imported from abroad.

Customs—The assumption however that the value of imports will be maintained does not necessarily imply that the value of the import duties will also remain the same.

I have already explained the special position as regards sugar, showing how the present development of the Indian industry is affecting our revenue. On these considerations we think it necessary to allow for a drop of one crore in receipts from the sugar import duties which will not be offset by any increase under other heads.

In regard to cotton piece-goods also, for reasons which I have explained, we think it necessary to regard the revenue from import duties—at least on Japanese goods—as to some extent abnormal and not likely to be repeated. Here therefore we have allowed for a drop of 30 lakhs.

As against these reductions we have thought it safe to count on a small revenue (25 lakhs) from silver imports—because having closed the gap in our land customs line on the Burmese frontier through which a large trade in silver from China was suddenly developing in the course of the last year we think it reasonable to expect a moderate resumption of dutiable imports.

Making allowance for these and other minor variations, our customs revenue estimates for next year are put at 51.25 lakhs showing a reduction of 104 lakhs from the revised estimates of the current year.

The position as regards net receipts may be summarised as follows—

	Revenue (Lakhs)
Budget Estimate, 1932-33	52.31 27
Revised Estimate, 1932 33	52.28 55
Budget Estimate 1933-34	51.24 60

Debt Service—Regarding the service of debt the Finance Member said—

In the first place as regards interest payments, the reductions shown are satisfactory, namely, 204 lakhs as compared with 1931-32 and 51 lakhs as compared with the revised estimate for 1932-33. I must however explain that the full result of the conversion operations recently undertaken is not yet revealed. The

results indeed of the latest operation were not known at the time our estimates had to be compiled but apart from this there are other special reasons. Although our main conversion scheme has been directed to substituting one form of permanent debt for another, the process has been a continuous one which is not yet completed, and the first actual result in the current year has been to reduce treasury bills held by the public and the Paper Currency Reserve by approximately Rs 34 crores. Our rent rates for treasury bills had fallen so low that this aspect of the conversion actually represents, initially at least, an increase in the interest charges. It must be remembered, however, that this large reduction in our treasury bills outstanding is not only a sound operation in itself, but by strengthening the Government position enables it to reduce interest rates both for the remaining volume of treasury bills and for its permanent debt.

Civil Expenditure—The budget estimate of Civil expenditure for the current year (1932-33) 48, excluding military expenditure expenditure on Commercial departments and Debt services was 20.65 lakhs. Our revised estimate now gives the figure as 20.89 lakhs. There is thus an apparent increase of 24 lakhs. But a closer examination shows that this increase does not denote any increase in real expenditure and indeed that the economy in recurrent expenditure has been greater than that which we promised. The figure of expenditure as shown in our accounts has had to be increased because special items amounting in all to 68½ lakhs but the great bulk of which do not denote real expenditure have had to be included.

Under the other heads of real expenditure we shall have achieved during this year economies of Rs 45 lakhs more than we promised. It may be remembered that in my budget speech in March last I stated that broadly speaking, against a total retrenchment in expenditure of Rs 499 lakhs recommended by the four civil sub-committees, Government had achieved economies of 433 lakhs or nearly 87 per cent before allowing for terminal charges which the committees did not take into account. The results according to the revised estimate for the current year which I have just given show that the actual economies achieved in normal expenditure amount to 45 lakhs more than this that is to say, to a total of 478 lakhs, or nearly 96 per cent of the amount recommended by the retrenchment committees.

Turning to the estimates of expenditure under these civil heads for next year I am glad to be able to report a still further improvement. As compared with the current year with its budget estimate of 20.65 lakhs and the revised estimate of 20.89 lakhs the estimates for 1933-34 are 20.53 lakhs, that is to say a reduction of 36 lakhs on the current year in spite of the following facts—first, that we have allowed for reducing the cut in pay to 5 per cent thereby incurring extra charges of 23 lakhs on these particular civil heads, secondly that we have to meet the normal increments in the scale pay which still involve an annual addition of something like 15 lakhs, and thirdly that we have to meet new obligatory expenditure

amounting to about 17 lakhs the nature of which I shall shortly explain. If all these items are taken into account it will be seen that the total of the net reductions otherwise effected under the normal heads of expenditure amount to not less than 98 lakhs. Honourable Members may say that they are not concerned with this figure but only with the saving of 36 lakhs actually effected, but I have given these explanations in order to show how we are continuing the retrenchment effort and what a constant effort is required 'merely to prevent expenditure from growing'.

Military Expenditure.—When I turn to the provision for the Military or Defence Budget the results are equally, or even more, satisfactory. For the current year (1932-33) allowing for the full effects of the 10 per cent cut in pay, the net budgetary allotment was Rs 46 74 crores. For next year the net expenditure provided for in the estimates, after allowing for an extra charge of Rs. 52½ lakhs due to the reduction in the cut in pay to 5 per cent is Rs 46 20 crores. That is to say although the pay bill is increased by Rs. 52½ lakhs the net expenditure is to be reduced by Rs 54 lakhs.

Financial Summary 1933-34.

REVENUE—	Rs lakhs	
	Better	Worse
Customs. —(Reduction due to fall allowed for in imports of sugar and cotton piece-goods)		1.04
Income-tax. —(Increase due to removal of exemption from sur charge on Government ser vants)	53	
Salt. —(Reduction mainly due to termination of temporary increase in receipts on termination of credit system)		1.63
Opium	25	
Finance heads. —Net changes including additional expenditure of 1 on account of part restoration of cut in pay		16
Commercial departments. —Net revenue		11
Miscellaneous. —(Reduction of 30 due to no provision being included in next year's estimates for Gain by Exchange)		45
EXPENDITURE—		
Military Civil heads. —Net reduction effected in spite of part restoration of pay out costing 79½ lakhs under these heads as compared with the revised estimates (This net reduction together with the reduction of 5 under Irrigation and Currency and Mint taken on the revenue side gives a total reduction of 90 as mentioned in para. 61)	85	
Total	163	338

As a result of the changes thus summarized the net deterioration for next year is estimated at 17½ lakhs, and thus the surplus of 217 lakhs shown in the revised estimate for the current year will be reduced to surplus of 42 lakhs.

The Cut in Pay.—Concerning the Government's decision to restore half the cut in pay the Finance Member said that the total cost was Rs 108 lakhs.

As against this the Central budget will recover as a result of the withdrawal of the exemption of income tax surcharges and the tax on incomes below Rs 2,000 from Government officials—not only officials paid against the Central budget but officials of the Railways and officials serving under the Provincial Governments—a net increase in income tax receipts of 58 lakhs.

The net cost of the proposal to the Central Government is thus 55 lakhs.

Changes in Duties.—The budget announced changes in the import duties on boots and shoes and artificial silk goods. Explaining these the Finance Member said

Special taxes going beyond the ordinary 25 per cent surcharge, viz a specific minimum duty on boots and shoes and enhanced rates of duty on artificial silk manufactures, were imposed on these two classes of articles in the Emergency Act of 1931, and these have proved excellent revenue producers. We estimate the yield from the duty on boots and shoes during the current year at Rs 27 lakhs, while the year's yield from artificial silk manufactures may be roughly estimated at nearly 14 crores. In the revenue estimates for 1933-34 I have assumed that these two taxes will bring in as much revenue next year as in the current year but it would not be safe to reckon on such a result if the duties were left unchanged. I will explain the reason for this.

First, in the case of boots and shoes, establishments have been set up in India for the production of shoes made from imported canvas uppers and imported rubber soles. Both of these constituents pay duty at no more than the standard revenue rate, and the result is that by this very simple process of merely assembling in India what are really foreign manufactures the amount of duty paid by importers is very greatly reduced. The Bill proposes, therefore to apply to uppers for boots and shoes a minimum specific duty at half the rate applicable to complete boots and shoes. This will do much to safeguard the revenue, while it will at the same time leave some slight margin of advantage to the local assembly plant as compared with the importer of the complete article. Leather uppers, which in any case could not be cheap enough to fall within the scope of the minimum specific duty are excluded for the technical reason that the *ad valorem* duty to which they are liable is, owing to the operation of the Ottawa Trade Agreement, different from that applicable to other uppers.

Rayon Goods.—"I now come to the second group of proposals which relate to artificial silk goods and to mixtures in which either silk or artificial silk may be included. The existing rate for mixtures is, owing to the operation of surcharges, 84½ per cent. This item was introduced as providing an intermediate rate between that applicable to silk and that applicable to the other textile ingredient, whatever it may be, with which the silk is mixed. With the raising of the duty on non-British cotton piece-goods to 50 per cent by the notification of last August, a new situation has been created, for manufacturers of such goods can escape this special duty by introducing at a trifling expense a very small quantity of silk or artificial silk into the warp or weft of cotton goods, and thus secure assessment at the lower rate of 3½ per cent applicable to mixtures—a result which would not only involve loss of revenue but would impair the operation of the protective policy of the Government. We have rejected a proposal that the mixed rate should be raised to 50 per cent, since that would be unfair to all the remaining classes of silk or artificial mixtures where the duty is still an intermediate one and have resorted instead to the device of a minimum specific duty.

"While a change in the duty on mixtures has been necessary for these reasons, it has also appeared desirable to us to guard against any falling off from the very satisfactory revenue that we have been receiving from the higher *ad valorem* duties on pure artificial silk goods, the imports of which are 50 per cent. Japanese such losses might occur either through a further fall in prices of Japanese goods, or through a decline in the volume of imports. We are also not able to leave out of consideration the possibility that to some extent competition of these goods, no less than of mixtures when imported at very cheap rates, may impair the effectiveness of the special protective duties on cotton piece-goods. Here again merely to raise the *ad valorem* rate would not only be a dangerous device from the revenue point of view, but would also be unfair to the manufacturers of the more expensive article in countries other than Japan, and for both these reasons we have in this case also resorted to the device of a minimum specific duty.

"The duties which we propose in both these cases have been carefully worked out in the light of the objectives to be attained, and they are 4 annas per square yard for pure goods and 2 annas 8 pias for mixtures. (I may here note that in the case of both these proposals no distinction is made between silk and artificial silk. I have already explained why this must be so in the case of mixtures. In the case of pure goods, although the arguments in favour of imposing the specific duty for pure artificial silk goods do not apply to pure silk goods, nevertheless in practice it is highly unlikely that the duty which we have proposed will ever come into operation with silk goods, while it is desirable on administrative grounds to maintain the duty on silk goods and artificial

silk goods at the same level. We are therefore nominally extending the minimum to silk goods also. We do not think that these specific duties should be applied to fente, which, as in the case of cotton fente, will remain liable to the ordinary *ad valorem* duty.)

"The value per square yard of the classes of piece goods concerned can only be estimated, since the trade is recorded in linear yards, but on the best estimate that can be made we calculate that with present prices the *ad valorem* incidence of the proposed duties will, in the case of pure artificial silk goods, be 100 per cent on the Japanese and from 26 to 32 per cent on others, while on silk and artificial silk mixtures the average incidence will be 47 per cent on Japanese goods and from 32 to 36 per cent on others. In regard to mixtures I would remind the House that we are here mainly concerned with a possible abuse of the mixture definition so as to pass off what should really be called cotton goods as mixtures in which case the *ad valorem* incidence of the specific duty would be very much higher.

"Finally I may say that we are making one more slight change and taking this opportunity to round off to 35 per cent the present duty on mixtures which, owing to the operation of the two surcharges has reached the uncomfortable figure of 84½ per cent.

Duty on Cheques.—Announcing the re-
position of the stamp duty on cheques the Finance Member said —

"The House will remember that the stamp duty on cheques was abolished with effect from the 1st July 1927 on the recommendation of the Currency Commission of 1926. It was hoped that the abolition of the duty in India would lead to a wide adoption of cheques as a means of payment and thereby to a desirable encouragement of the banking habit. The actual results however have not been encouraging and from enquiries made the Government of India believe that the remission of the duty has not had much effect. The report of the Indian Central Banking Enquiry Committee tends to confirm this belief as it found that the most serious obstacle to the growth of the cheque habit in the country was the illiteracy of the people. We therefore felt that we had no strong grounds on which to resist the demand which has been pressed upon us by various Provincial Governments that the stamp duty should be reimposed in order to help their revenue. We estimate that the proceeds in a full year will be about seven lakhs of which the greater share will go to Bombay and Bengal."

Assembly Decision.

The assembly threw out the proposal for a stamp duty on cheques and by 59 votes to 23 carried a resolution to reduce the rate of income tax from 4 pias to 2 pias on incomes between Rs. 1,000 and Rs. 1,500.

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strictly theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1793 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey on the basis of the trigonometrical and topographical surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1921):—"He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's Proceedings, and to much greater

rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers, the assessments proposed by him require the sanction of the Government before they become finally binding, and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists.

The Two Tenures.

Under the Temporary Settlement land tenures fall into two classes—peasant-holdings and landlord-holdings, or *Ryotwari* and *zamindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct in *zamindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, *ryotwari* tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the assessing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment." The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charge varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than Rs. 6,000,000 from a total rental estimated at Rs. 12,000,000. Under Temporary

Settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 25 and even 20 per cent. and only rarely is the proportion of one-half the rental exceeded. In regard to *Agri-cultural tracts* it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly. About sixteen years ago the Government of India were invited in an influential signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact and the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume, it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted—(1) In *Zemindari* tracts progressive moderation is the key note of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess. (2) In the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords. (3) In *Agri-cultural tracts* the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened. (4) local-taxation (of land) as a whole is neither immoderate nor burdensome. (5) over-assessment is not as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue when they occur, to be imposed progressively and gradually, and not *per saltum*, (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasons, variations and the circumstances of the people (c) a more general resort to reduction of assessments in cases of local difficulties.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act

passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above, "so far from being generously treated by the *Zemindars*, the Bengal cultivator was rack rented impoverished, and oppressed."

Government and Cultivator

While the Government thus interferes between landlord and tenant in the interests of the latter its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual whereas under a *Zemindari* or kindred system the State would have gained nothing. However much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the State in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million as compared with £84 million said to have been raised annually by Aurangzeb from a much smaller Empire.

The literature on the subject is considerable. The following should be consulted by readers who require fuller information.—"Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing), Baden Powell's "Land Systems of British India," Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.), M. Joseph Chailley's "Administrative Problems of British India," (Macmillan & Co., 1910), and the Annual Administration Reports of the respective Provincial Governments.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a common place amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit, fermented palm juice, beer made from grain, country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquor. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst these peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision, and to regularise its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly

stated the stages of development have been—First farms of large tracts, Second farms of smaller areas. Third farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area, Fourth farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the key note lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition amongst the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender the rate of still head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licences, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Since the issue of the report of the Excise Committee 1905-06, no less than 213,000 square miles of territory were transferred from the out-still to the distilling system. In 1905-06 89 per cent of the total excise area and 88 per cent of the population of that area were served by out-stills, the proportions in 1912-13 were only 15 and 8 per cent respectively.

Excise has now been made over entirely to the Provincial Governments, and the duties

vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumption for the year 1930-31. From that consumption reduced to proof gallons, 10 per cent. is deducted in the case of shops in Bombay City and 8 per cent. elsewhere and the ration is then fixed for each shop according to the issue in the corresponding month of 1930-31. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management, thus partially superseding the Contract Distilling system.

Sap of the date, palm-ye, and coconut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop license is the sole form of taxation. Country brands of rum, and so-called brandies and whiskeys, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries have been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption. The uniform fee of 3 annas per gallon is levied all over India at the time of issue.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (g. s.). It can only be sold under a license.

Since the war Brandy and Whisky have been manufactured in considerable quantities at Masoda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

Drugs.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant *chansa*, or the resinous matter which forms an

active drug when collected separately, and *bhanga*, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of *chansa* has been prohibited in the Bombay Presidency except Bindh from the 1st April 1923.

Opium.—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills, but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction in one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It has been decided to reduce the total of the opium exported since the calendar year 1923 by 10 per cent. annually in each subsequent year until exports are totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a numerous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply, rock salt from the Salt Range and Khet Mines in the Punjab, brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch, and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contain an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 41 feet wide, and 250 feet high. The Rajasthan supply chiefly comes from the Sambhar Lake where brine is extracted

and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as *Berasara* salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea-salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Africa, Bombay and Madras.

Broadly, one-half of the indigenous salt is manufactured by Government Agency, and the remainder under license and *qanbe* systems,

In the Punjab and Rajputana the salt manufactures are under the control of the Northern India Salt Department a branch of the Commerce and Industry Department. In Madras and Bombay the manufactures are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damann on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India. From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2, in 1905 to Rs. 1-8-0, in 1907 to Rs. 1 and in 1916 it was raised to Rs. 1-4-0. The successive

reductions in duty have led to a largely increased consumption, the figures rising by 35 per cent between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Rs. 1-4-0. The duty remained at Rs. 1-4-0 from March 1924 to 30th September, 1931. It was raised to Rs. 1-8-0 with effect from 30th September 1931. Prior to 17th March, 1931, the excise duty and import duty on salt were always kept similar, but by the Indian Salt (Additional Import Duty) Act, XIV of 1931, the import duty on foreign salt was fixed at Rs. 1-8-6 from 17th March 1931 and it was again raised to Rs. 1-13-6 from the 30th September 1931.

CUSTOMS

The import duties have varied from time to time according to the financial condition of the country. Before the War they were five per cent., in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1975 they were reduced to five per cent. but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were re-imposed, yarns and cotton fabrics being excluded. Continued financial stringency brought piece-goods within the scope of the tariff, and after various expedients the demands of Lancashire were satisfied by a general duty of 3½ per cent. on all woven goods—an import duty on goods by sea, an excise duty on goods produced in the country. The products of the hand-looms are excluded. These excise duties are intensely unpopular in India, for reasons set out in the special article dealing with the subject. In 1916-17, in order to meet the deficit threatened by the loss of the revenue on opium exported to China, the silver duty was raised from 5 per cent. to 4d. an ounce, and higher duties levied on petroleum, tobacco, wines, spirits, and beer. These were estimated to produce £1 million annually.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbances set up by the war. The general import tariff, which had been at the rate of 5 per cent. *ad valorem* since was raised to 7½ per cent. *ad valorem*, except in the case of sugar, as India is the largest producer of sugar in the world the import duty on this staple was fixed at 10 per cent. There was also a material curtailment of the free list. The principal articles of trade which was not touched was cotton manufactures. For the past twenty years the position has been that cotton twines and yarns of all kinds are free of duty while a duty at the rate of 3½ per cent. is imposed on woven goods of all kinds whether imported or manufactured in Indian mills. The Budget left the position as it stood. The Government of India would have been glad to see the tariff raised to 5 per cent. without any corresponding alteration of the excises, but were over-ruled by the Cabinet on the ground that this controversial matter must come up for discussion after the war. Finally

the Budget imposed export duties on tea and jute. In the case of tea the duty was fixed at Rs. 1-8-0 per 100 lbs., in the case of jute the export duty on raw jute was fixed at Rs. 2-4-0 per bale of 480 lbs., approximately equivalent to an *ad valorem* duty of 5 per cent. Manufactured jute was charged at the rate of Rs. 10 per ton on packing and Rs. 16 per ton on Hessian.

The Customs Tariff was further materially modified in the Budget for 1917-18. In the previous year an export duty on jute was imposed at the rate of Rs. 2-4-0 per bale of 480 lbs. In the case of raw jute and Rs. 16 per ton on packings, and Rs. 16 per ton on Hessian, these rates were doubled, with a view to obtaining an additional revenue of £500,000. The import duty on cotton goods was raised from 3½ per cent. to 7½ per cent. without any alteration in the Excises, which remained at 3½ per cent. This change was expected to produce an additional revenue of £1,000,000. The question of the Excises was left untouched, for the reason, amongst others, that the Government could not possibly forego the revenue of £250,000, which it was expected to produce. With these changes in operation the revenue from Customs in 1920-21 was Rs. 22,37,29,000.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced. The general *ad valorem* duty was raised from 7½ to 11 per cent., a special duty was levied on matches of 15 annas per gross boxes in place of the existing *ad valorem* duty of 7½ per cent. the duties on imported liquors was raised to 5 annas per degree of proof per gallon, the *ad valorem* duty of 7½ per cent. was raised to 20 per cent. In the case of certain articles of luxury, the import duty on foreign sugar was increased from 10 to 15 per cent. and the duty on manufactured tobacco was raised by 50 per cent. The Customs duties were further increased in the Budget of 1923-24. The Government proposals in this direction have been described in an early passage. They were to raise the general Customs duty from 11 to 15 per cent., the cotton excise duty from 3½ per cent. to 7½ per cent., the duty on sugar from 15 to 25 per cent., a duty of 5 per cent. on imported yarn, a rising duty on machinery, iron, steel and railway material from 2½ per cent. to 10 per cent. together with the general duty on articles of luxury from 20 per cent. to 30 per cent. In the course of the passage of the Budget through the Legislature the cotton excise duty was

retained at 2½ per cent., the duty on machinery was retained at 2½ per cent., and the duty on cotton piece-goods at 1½ per cent., the other increases being accepted. In 1925 the Cotton Excise duties were finally abolished. Full details with regard to the customs duty are set out in the section on Indian Customs Tariff (q v). The Customs duties have been repeatedly raised in recent Budgets both as a protective measure and for revenue purposes. The latest duties will be found in detail in the Financial Section of the Year Book. The estimated revenue from the Customs in 1933-34 is Rs.50,27 crores.

The Senior Collectors were Covenanted Civilian specially chosen for this duty, before the introduction of the Imperial Customs Service in

1908. Since that date, of the five Collectors at the principal ports (Calcutta, Bombay, Madras, Rangoon, and Karachi) three are ordinarily reserved for Members of the I. C. S. (i.e., "Covenanted Civilian"). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways. (a) from members of the Indian Civil Service—3 vacancies, and (b) by the Secretary of State—19 vacancies. There are in addition a few Gazetted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The subordinate staff is recruited entirely in India.

INCOME TAX.

The income tax was first imposed in India in 1880, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 0½d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1896. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pice in the rupee, or about 1½d. in the pound on incomes between 500 and

2,000 rupees at the rate of four pice in the rupee or about 5d. in the pound. In March 1908 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Supplementary Finance Bill of 1931, when the scale was fixed as follows:—

(RATES OF INCOME-TAX)

A. In the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or company:—

	RATE (<i>Vide Footnote</i>)
(1) When the total income is less than Rs 2,000	Six pice in the rupee
(2) When the total income is Rs. 2,000 or upwards, but is less than Rs 5,000	Nine pice in the rupee.
(3) When the total income is Rs 5,000 or upwards, but is less than Rs 10,000	One anna in the rupee
(4) When the total income is Rs. 10,000 or upwards, but is less than Rs 15,000	One anna and four pice in the rupee.
(5) When the total income is Rs 15,000 or upwards, but is less than Rs 30,000	One anna and seven pice in the rupee
(6) When the total income is Rs 20,000 or upwards but is less than Rs 40,000	One anna and eleven pice in the rupee.
(7) When the total income is Rs 30,000 or upwards but is less than Rs 100,000	Two annas and one pice in the rupee
(8) When the total income is Rs 40,000 or upwards but is less than Rs 100,000	Two annas and two pice in the rupee
(9) When the total income is Rs 100,000 or upwards	Two annas and two pice in the rupee
B. In the case of every company and registered firm whatever its total income	

F.B.—Additional tax (Sur-charge) for the financial year:—

1931-32	at 12½ per cent
and	
1932-33	at 25 per cent

over the rates prescribed by the Indian Finance Act, 1931, except in cases of income between Rs 1,000 to Rs 1,999

Tax at 2 pice on incomes between Rs 1,000 to Rs 1,999 for the year 1931-32 and

Tax at 4 pice for the year 1932-33 on the same income

The surcharge was continued in the budget of 1933-34, as resolved by the assembly the rate of incomes between Rs 1,000 & Rs. 1,500 was reduced from 4 pice to 2 pice

RATES OF SUPER-TAX

In respect of the excess over thirty thousand of total income —

	RATE.
(1) in the case of every company—	<i>NIL</i>
(a) in respect of the first twenty thousand rupees of such excess	<i>NIL</i>
(b) for every rupee of the remainder of such excess	One anna in the rupee
(c) for every rupee of the remainder of such excess	One anna in the rupee
(2) (a) in the case of every Hindu undivided family —	
(i) in respect of the first forty-five thousand rupees of such excess.	One anna and three pies in the rupee
(ii) for every rupee of the next twenty-five thousand rupees of such excess	<i>NIL</i>
(b) In the case of every individual, unregistered firm and other association of individuals not being a registered firm or a company —	
(i) for every rupee of the first twenty thousand rupees of such excess	Nine pies in the rupee
(ii) for every rupee of the next fifty thousand rupees of such excess	One anna and three pies in the rupee
(c) in the case of every individual Hindu undivided family unregistered firm and other association of individuals not being a registered firm or a company	
(i) for every rupee of the next fifty thousand rupees of such excess	One anna and nine pies in the rupee
(ii) for every rupee of the next fifty thousand rupees of such excess	Two annas and three pies in the rupee
(iii) for every rupee of the next fifty thousand rupees of such excess	Two annas and nine pies in the rupee
(iv) for every rupee of the next fifty thousand rupees of such excess	Three annas and three pies in the rupee
(v) for every rupee of the next fifty thousand rupees of such excess	Three annas and nine pies in the rupee
(vi) for every rupee of the next fifty thousand rupees of such excess	Four annas and three pies in the rupee
(vii) for every rupee of the next fifty thousand rupees of such excess	Four annas and nine pies in the rupee
(viii) for every rupee of the next fifty thousand rupees of such excess	Five annas and three pies in the rupee
(ix) for every rupee of the next fifty thousand rupees of such excess	Five annas and nine pies in the rupee
(x) for every rupee of the remainder of such excess	Six annas and three pies in the rupee

The head of the Income-Tax Department of a province is the Commissioner of Income-tax who is appointed by the Governor-General in Council. The rest of the income-tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is, under section 5 (4) subject to the control of the Governor-General in Council," but the Governor-General in Council exercises this control through the local Government.

The estimated yield of Income-tax in 1932-33 is Rs 17,38.17

HISTORY OF THE COINAGE

The Indian mints were closed to the un restricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 21 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency

Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only

one-half of the coinage profit should be paid into the reserve, the remainder being used for capital expenditure on railways. The Gold Standard Reserve was called into action before the year 1907-08 was out. Brothage turned against India, and in March 1908, the Government of India offered bills on the Secretary of State up to half a million sterling, while the Secretary of State sold £1,000,000 Consols in order to meet such demands. During April to August, further sterling bills were sold for a total amount of £5,085,000. On a representation by the Government of India, the Secretary of State agreed to defer the application of coinage profits to railway construction until the sterling assets of the Gold Standard Reserve amounted to £25,000,000. On the outbreak of the war in August 1914 the Reserve was drawn upon to meet the demands for sterling remittances, and Government offer to sell £1,000,000 of Bills weekly.

Gold

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohur before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the Royal Mint at Bombay. It stated—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch Royal Mint, power was taken by legislation to coin in India gold coins of the same weight and fineness as the sovereign. Altogether 2,400,708 pieces of these new coins of the nominal value of Rs 3.16.45.545 were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,572 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pence per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, starting for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine

sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the refining of gold by the chloride process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold. The Refinery turned out 10,88,466 fine tolas of refined gold in 1920-21.

Silver

The weight and fineness of the silver coins are—

	PURE SILVER grains	ALLOY grains	TOTAL grains
Rupree	165	15	180
Half rupee	82½	7½	90
Quarter-rupee or 4-anna piece	41¼	3¾	45
Half of a rupee or 2-anna piece	20½	1¾	22½

One rupee = 165 grains of fine silver

One shilling = 80½ grains of fine silver

One rupee = shillings 2 0489

Copper and Bronze

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1855 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows—

	Grains	troy
Double pie or half-anna	200	
Pice or quarter-anna	100	
Half-pice or one-eighth of an anna	50	
Pis being one-third of a pice or one-twelfth of an anna	33½	

The weight and dimensions of bronze coins are as follows—

	Standard weight in grains troy	Diameter in millimetres
Pice	75	25.4
Half pice	37½	21.15
Pis	25	17.45

Nickel

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should henceforth be coined at the Mint and issue. The notification also prescribed the design of the coin, which has a waved edge with twelve scallops, the greatest diameter of the coin being 21 millimetres and its least diameter 19.8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

The Currency System.

The working of the Indian currency system which has commanded a large amount of public attention since 1898, was forced to the front in 1930, as the result of measures taken to stabilise the exchange value of the rupee after the fluctuations caused by the war. These assumed so

much importance and they continue to bulk so largely in all Indian economic questions, that we propose to give here a short summary of the Indian currency system in non-technical language.

I. THE SILVER STANDARD

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily rose in value. The result was that the gold value of the rupee which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payments for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no-one else had the power to coin rupees, as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called, marked the second stage in Indian currency policy.

II THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and four pence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India, that the Indian mints should be thrown open to the unrestricted coinage of gold, so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on selling rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of selling rupees was approximately eleven pence halfpenny, and they were sold to the public at

one and four pence, the profits were considerable, they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee, actually only a portion of them was put in practice. The official rate of exchange was fixed at one and four pence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt when sovereigns soon came back to the treasury, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India, sold Bills against gold deposited in the Bank of England in London. These Bills when presented

in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Starting Remittances.—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a

liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up, meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough, there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty three thirty-seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty nine thirty-seconds, representing gold export point and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London, it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee for there was no gold mint and only a limited gold circulation, some people invented for it the novel term of the gold exchange standard a term unknown to the law of India. It was described by one of the most active workers in it as a 'limping standard

III THE CHAMBERLAIN COMMITTEE

This brings us to the year 1918. There were many critics of the system. Some hankered for a return to the open mints, others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India, at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure, at the transfer of a solid block of the Paper Currency Reserve from India to London, at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees, and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the require-

ments of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions where they were lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the basis of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times* and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co, instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency that it was not to the advantage of India to encourage the internal use of gold as currency, that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling, that no limit should be fixed to the amount of the Gold Standard Reserve one-half of which should be held in gold, that the silver branch of the Gold Standard Reserve should be abolished, that Reverse Councils should be sold on demand, that the Paper Currency should be made more elastic, and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Com-

mittee dealt in conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being 'not guilty, but do not do it again.' They gave a passing commendation to the idea of a State Bank. Sir James Begg, the only Indian banker on the Committee appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV CURRENCY AND THE WAR

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporary recommendations of the Commission the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, £8,707,000, being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs 8 crores was taken away. There was some lack of confidence in the Note issue and a demand for gold. Notes to the extent of Rs 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium, confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries, a heavy expenditure in India on behalf of the British Government, and a phenomenal rise in the price of silver. If we take the three years 1915-17 to 1918-19 the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 37½ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange—The measures adopted by the Government of India in these emergency cases were to bring exchange under rigid control, confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence—

Date of Introduction	Minimum Rate for Immediate Telegraphic Transfers.
3rd January 1917	1 4½
28th August 1917	1 5
12th April 1918	1 6
15th May 1918	1 8
12th August 1918	1 10
15th September 1919	2 0
22nd November 1919	2 2
12th December 1919	2 4

V THE 1919 COMMITTEE.

The effect of these measures however was to tighten the currency policy pursued from 1899 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below—

(1) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(44) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee are expedients that cannot be recommended.

(45) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(46) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(47) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(48) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(49) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(50) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(51) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(52) The stable relation to be established between the rupee and gold should be at the rate of Rs 10 to one sovereign, or in other words at the rate of one rupee for 11.30.016 grains of fine gold, both for foreign exchange and for internal circulation.

(53) If silver rises for more than a brief period above the parity of 2s (gold) the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills, (b) abstention from purchase of silver, (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(54) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands, but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when the trade demands for them exist, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorized to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reserve Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(55) The import and export of gold to and from India should be free from Government control.

(56) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent of the gross circulation.

As regards the fiduciary portion of the reserve the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(57) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee it will be seen was to secure a stable rate of exchange, without impairing the convertibility of the Note issue and without debasing the standard silver rupee in India or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold. All other recommendations are subsidiary thereto. But in this they were not unanimous. An important member of the Committee, Mr. Dadiba Dalal, of Bombay, appended a minority report in which he urged the adoption of the following course:—

(a) The money standard in India should remain unaltered, that is the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(d) The existing silver rupees of 166 grains of the silver at present in circulation to continue full legal tender.

(e) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be an limited legal tender.

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(A) Revenue drafts on London to be sold only at 1s 320-32d. The proceeds of Revenue drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s 43-32d per rupee.

VI. THE TWO SHILLING RUPEE

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling that it should be linked at the rate of two shillings instead of the standard value, one and fourpence. All other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But the convertibility of the rupee were to be maintained and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupees in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted.—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion.—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sale of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the

Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchange as measured in dollars, the dollar sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Leverette Councils to take advantage of this high rate of exchange, the market rate jumped up to two shillings eightpence.

Effect of the Rise.—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report: "It is that a rising exchange stimulates imports and impedes exports; the effect of a falling exchange is the reverse."

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it by the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export of foodstuffs, save to a limited extent in the case of wheat. On the other hand the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled a prominent place. Afterwards other forces intervened which exacerbated the difficulties of the situation. There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crops came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India which made the stabilisation of exchange at the high rate attempted a hopeless proposition.

Confession of Failure.—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence half penny. They sold two millions of Reverse Councils a week, then five millions then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England, thus increasing the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Bank set aside all their available resources for the purpose of bidding for Bills and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold.—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced the instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always two pence or three pence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and six pence and one and seven pence, and it continued to range between these narrow points until the end of the year. The market made its own rate, it was a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures.—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one. Due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918 and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered although there was extensive smuggling of sovereigns into India to take advantage of the premium. These measures were adopted to give greater elasticity to the Note issue. Under the old law the invested portion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent. of the Note issue the invested portion being limited to Rs 20 crores in Indian securities and the balance in British securities of not more than twelve months currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue power was taken to issue Rs 5 crores of emergency currency in the busy season against commercial bills. These measures save the alteration of the ratio were generally approved by the commercial public.

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade; the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand; importers found themselves loaded up with imported goods bought in the expectation of the continuance of a high rate of exchange delivered when it had fallen out and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reserve Councils before abandoning

their effort to stabilise exchange at the new ratio, the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was 15 crores of rupees. Government sold £54 millions of gold without breaking or seriously affecting the premium on gold. The Secretary of State in the absence of any demand for Council Bills was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII COMMISSION OF 1925-26

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way and proved their ignorance went out of the field, and the wholesome policy of leaving Exchange alone to find its natural level followed. Left alone Exchange established itself round about the old rate of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name, and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within usable proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs. 12 crores against commercial paper endorsed by the Imperial Bank when there is a slight need of money and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent and a Committee was appointed in the autumn of 1925. Of this Commander Milford Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strong by criticism in India on the ground that the Indian membership was inadequate and that the individuals selected were not authoritative, a resolution was passed in the

Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926 and resumed its hearings in London and reported on July 1st 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms and they are virtually reproduced in order that they may be above question—

(a) The ordinary medium of circulation should remain the currency note and the silver rupee; and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

(b) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(c) The Central Banking functions should be entrusted to a new organisation referred to as the Reserve Bank.

(d) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(e) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(f) Subject to the payment of limited dividends and the building up of suitable reserve funds the balance of the profits of the Reserve Bank should be paid over to the Government.

(g) The Bank should be given the sole right of note issue for a period of (say) 20 years. Not later than five years from the date of the charter becoming operative Government notes should cease to be legal tender except at Government Treasuries.

(h) The notes of the Bank should be full legal tender and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor General in Council. A suggestion is made as to the form of the note.

(as) An obligation should be imposed by statute on the Bank to buy and sell gold with out limit at rate determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 to ounces no limitation being imposed as to the purpose for which the gold is required.

(at) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non monetary purposes. The method by which this may be secured is suggested.

(ai) The legal tender quality of the sovereign and the half-sovereign should be removed.

(aj) Government should offer 'on tap' savings certificate redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(ak) The paper currency should cease to be convertible by law into silver coin. It should however be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency and of the Government to supply coin to the Bank on demand.

(al) One rupee notes should be introduced and should be full legal tender.

(am) Notes other than the one rupee note should be legally convertible into legal tender money i.e. into notes of smaller denomination or silver rupees at the option of the currency authority.

(an) No change should be made in the legal tender character of the silver rupee.

(ao) The Paper Currency and Gold Standard Reserve should be amalgamated and the proportions and composition of the combined Reserve should be fixed by statute.

(ap) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent. of the Reserve subject to a possible temporary reduction with the consent of Government on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent of the Reserve as soon as possible and to 25 per cent within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one half should be held in India.

(aq) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.

(ar) The balance of the Reserve should be held in self liquidating trade bills and Government of India securities. The 'created' securities should be replaced by marketable securities within ten years.

(as) A figure of Rs 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in

issue shall be added to or subtracted from this liability and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(aw) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.

(ax) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free at its discretion to employ such method or methods of remittance as it may find conducive to smooth working.

(ay) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(az) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India) as well as the banking reserves in India of all banks operating in India should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(ba) The transfer of Reserve assets should take place not later than 1st January 1929 and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(bb) During the transition period the currency authority (i.e. the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form of which the outline is suggested.

(bc) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s 6d.

(bd) The stamp duty on bills of exchange and cheques should be abolished. All forms, in the English language and the vernacular in parallel, should be on sale at post office.

(be) Measures should be taken to promote the development of banking in India.

(bf) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent—Whilst all the members of the Commission signed the report one of their number Sir Purushotamdas Thakordas, did not subject to a minute of dissent. In the first part of this Minute Sir Purushotamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that through out the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that their efforts were unassisted by successive Secretaries of State, who had in view something which was often called the Gold

Exchange Standard but which was in effect no standard at all. On the question of the Gold Standard he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank Sir Purnabotandas whilst recognising that the scheme proposed might be the ideal to be attained in process of time thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio.

Dealing with the ratio of the rupee to gold Sir Purnabotandas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio and thus legally to restore the long current legal standard of money payments. This it declined to do and by limiting the supply of currency the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Providing to analyse the course of prices and wages he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms—

I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian currency system. I am convinced that if the absolute necessity of the free inflow of gold which I have emphasised is recognised and steps taken to ensure it the gold bullion standard proposed will be the correct one and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s 6d is accepted and acted upon India will be faced during the next few years with a disturbance in her economic organisation the magnitude of which is difficult to estimate but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to-day and industries will have to undergo a painful process of adjustment, an adjustment unwarranted and avoidable—an adjustment which will be much to their cost and affect not only their stability and their progress, but in certain cases, their very existence. And should Nature leave in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1s 6d the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete

the gold resources of the country to an extent that may seriously shake the confidence of the people in the currency system recommended.

A Survey—The official summary of the report given above does not however convey an idea of the far reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some retreading of the path laid out in the introductory section, but this is unavoidable if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked—

What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonists, the late Sir Lionel Alabaster who described it as a *floating standard*. The Royal Commission declares that in truth in so far as it amounted to a definite standard at all it was a standard of sterling exchange. Later this shows that the automatic working of the exchange standard is thus not adequately provided for in India and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency. Under the Indian system contraction is not, and never has been automatic.

However the standard limped along until the third year of the war. The exchange value of the rupee was stable, prices adjusted themselves to the ratio, Indian trade and industry developed. From the narrow standpoint of profit and loss the investment of the reserves, instead of keeping them in gold resulted in a considerable gain to the finances estimated in 1925 at £17,902,460. But it had three great disadvantages. It did not inspire public confidence. It placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it and it left the control of currency in the Government divorced from the control of credit by the *Reserve Bank*. Afterwards unananimously in the Imperial Bank of India. On this the Commission make a very suggestive comment when allowance has been made for all misunderstandings and misapprehensions the fact remains that a large measure of distrust in the present system is justified by its imperfections.

There is I think an inadequate appreciation of the influence on the Indian currency and exchange of the war and the action taken there after. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917 when the full effect of depreciation on the silver market was revealed. Taced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or the abandon the

convertibility of the Note Issue. While it took the former aim to have the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Hastings Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event but if the Government had followed silver down as it followed silver up there is no room to doubt that the rupee would have returned to its permanent ratio with no more disturbance than was inevitable under war conditions. However this was not done. The vain effort to stabilise the new ratio was abandoned in September 1920 and the two shilling rupee has since been a legal fiction. Left free from administrative action the rupee fell below one shilling and three pence sterling and one shilling gold in 1921. Since under the influence of good harvests it has climbed upwards and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report "The stability of the gold value of the rupee is thus based upon nothing more, at a vital time, a policy of the Government and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency and those acts are subject to no statutory regulation or control."

The responsibility allotted to the Commission was not therefore the mere stabilisation of the rupee but the establishment of a standard which would command reasoned confidence in India to link the rupee to that standard and to provide for its statutory control, autonomy of working and stability, to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency—In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard and its early conversion into the gold standard supported by the gold currency with a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department but it is known to be the work of the Finance Member Sir Basil Blackett, whose work in India is of the greatest value.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 or more as soon as sufficient gold was available to put a gold coin in circulation after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees and after a further period also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the

disposal of 200 crores of silver rupees, or 667 million fine ounces in ten years the acquisition in all of £108 millions of gold and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two thirds of a crore to 1 1/2 crores.

This scheme is subjected by the Commission to a detailed examination and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain and the absorption by India of this £108 millions of gold in addition to the normal absorption for the arts, boards, etc., would powerfully react on the supplies of credit, the rates of interest and gold prices throughout the world. The reaction on the silver market from the dothronment of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover the capacity to raise the required credits is doubtful and the cost is placed by the India Office at Rs 3 crores a year.

The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also that whilst London working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency ills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard—The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever. In breaking apart from any idea of a sterling exchange or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity for safeguarding the

Indian system from the price of silver rising above the melting point of the rupee, and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

This reasoning is eminently sound and the scheme in its broad outlines should command the unhesitating support not only of India but of all interested in Indian trade. India will have nothing to do with any exchange standard; its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversy it is desired to close. The gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded; it involves the demoralisation of the sovereign to which a sentimental infatuation attaches. But whilst it does not do these things it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point, the proposals leave India perfectly free to decide through her legislature where a gold currency is worth the expense.

We must, however, face the obligation which a gold bullion standard imposes on the currency authority in India: indeed the Commission do not attempt to Burke it. The obligation is to convert the currency, not merely into foreign exchange but into metallic gold and it is an obligation that is not, as formerly, conditional and circumscribed, but absolute and unlimited. Nevertheless it has been undertaken by every other country that has adopted an effective gold standard and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation with the measures of fortification, and at the time, which we specify. It is important therefore to examine the reserves and the procedure thereat.

The reserves held for the purpose of maintaining the value of the token currency are twofold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30 1925 (the date taken by the Commission) was as follows—

Paper Currency Reserve

	Rs. (Crores)
Silver coin	77.0
Silver bullion	7.7
Gold coin and bullion	22.3
Rupee securities	57.1
Sterling securities	21.0
	185.1

(The gold coin and bullion and the sterling securities are converted at the legal fiction rate of two shillings per rupee.)

The Gold Standard Reserve amounts at present to 240,000,000 invested in Gold and in British Treasury Bills and other sterling securities.

In theory the two reserves fulfill entirely different functions. The Paper Currency Reserve is the backing for the Note issue. The Gold Standard Reserve, accumulated from the profits on coinage, is designed to maintain the external value of the rupee. In practice their action is closely interlocked and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This inevitable line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute: that gold and gold securities should form not less than 40 per cent. of the whole with 50 to 60 per cent. as the ideal; and that the holding of gold which now stands at about 12.8 per cent. should be raised to 20 per cent. as soon as possible, and to 25 per cent. in ten years. Generally they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

The proposal to bring the combined Reserve under statutory control is, as an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—The majority of the Commission Sir Purnoharadas Thakordas being the only dissentient recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated. It is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence. The Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August 1917.

One principle advanced in Sir Dadabhai Naoroji's prophetic minority report in 1919 that the legal standard of money payments should be, and usually is, regarded as less open to repeal or modification than any other legislative Act, will command general acceptance. But when Sir Dadabhai went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad, he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver but when it was not lowered. Silver fell, the attempt to stabilise the rupee

at the two shilling rate caused the Government of India large losses and inflicted a terrible blow on trade, after it was abandoned in September, 1920 the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter under the influence of a succession of abundant harvests it recovered. In 1923 it was one shilling and fourpence sterling. In October, 1924, one and sixpence sterling and one and four gold. With the rise in the pound to gold parity the rupee reached one and sixpence gold in June, 1925, and has remained there.

It is not I think open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920 or if advantage had been taken of its return to one and four the permanent standard might have been re-established without undue disturbance. Sir Purnohandas Thakordas asserts in his minute of dissent that the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have proceeded to us the issue in this regard as a *fait accompli*, achieved by them not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country.

It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India as it is a violent controversy will rage round this secondary issue, obscuring the great merit of the Commission's basic recommendation a true gold standard, statutory in its constitution and automatic in action, with the consequences of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the commission base their recommendation on the 'conviction which has been formed and cumulatively reinforced during the progress of our inquiry that at the present exchange rate of about one shilling and sixpence prices in India have already attained a substantial measure of adjustment with those in the world at large and as a corollary that any change in the rate would mean a difficult period of readjustment involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage. Sir Purnohandas Thakordas, in a closely reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence no ratio could be operative for over a year without reducing this result. But it is clear that the adjustments, especially in regard to wages in

Western India are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent of the whole population there has been no adjustment not in relation to the land revenue but a part of the movement. The ratio therefore cannot be determined as a question of academic principle but is a matter of expediency.

Here it seems to me the decisive factor is the economic consequences of a return to one shilling and fourpence. There is no half way house the rate must be either the *de facto* one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent with a consequent reduction of real wages by that proportion there would be convulsive disturbance of the foreign trade there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been overvalued in the past. It is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six, the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Currency Authority—A feature in the Indian currency system little appreciated in Great Britain is the predominance of the Government. The Commission lay special stress on the disabilities this entails. India is *perhaps the only country, among the great trading countries of the world* in which the Government exercises direct control over currency in general and over the note issue in particular. The banking and currency reserves of the country are thus separated. The Government controls the currency. The credit situation is controlled as far as it is controlled at all, by the Imperial Bank.

A volume might be written on this subject and on the controversy, the prejudice, and political harm which it involved. However, there is no useful purpose to be served by raking amongst these ashes though the curious will find much food for thought in the historical retrospect drawn entirely from official sources which forms the first part of Sir Purnohandas Thakordas's minute of dissent. The Commission propose to establish harmony between these hitherto diverse interests—though there has been a close working arrangement between the Government and the Imperial Bank of recent years, and the Government has developed the note issue with skill and enterprise—by the establishment of a new Reserve Bank. A detailed scheme for the constitution and working of the Bank understood to be the handiwork of Sir Henry Strakosch, is embodied in the Report. The Reserve Bank, with a capital of five crores of rupees is to have the sole right of the note issue the responsibility for maintaining the stability of the currency, the custody of the cash balances of the government and

the duty of carrying through its remittances. It is to act generally as a bank of the banks and its principal function will be to re-discount bankable bills held by the commercial banks. Subject to the payment of limited dividends and the building up of suitable reserve funds the balance of the profits is to be paid over to the Government in return for making over the note issue and the reserves the Government is to nominate the managing governor and deputy managing governor and three members of the Board—five members from a Board of fourteen. In order to free the Bank from political pressure the Commissioners think it desirable to provide that no person shall be appointed President or Vice President of a Local Board or shall be nominated as a member of the Central Board if he is a member of any of the legislatures.

The main principle underlying this recommendation is not open to question. It is of paramount importance to re-move the Indian currency system from official management and to link the control of currency with the control of credit. This involves the establishment of a Central Bank. But it is not the complete essential far from it.

India is sometimes spoken of as the sink for the precious metals. So long as she chiefly absorbed silver the West looked on with benevolent approval now she is turning, to gold the attitude is different. Indian capital is sometimes described as inadequate and timid. But critics do not realise that the banking organisation of the country is so hopelessly inadequate that hundreds of millions of people have no secure refuge for their store of value other than gold and silver bullion in their own possession. The Exchange Bank cling to the supports. The indigenous banks follow their example. The Imperial Bank is the only organisation which can carry reliable credit facilities into the remotest. The old Presidency Banks were lamentably slow in exercising this responsibility. The pace has been quickened and as the price of the free use of the Government balances the Imperial Bank was called upon to open a hundred new branches. The total number of its branches is yet only a hundred and sixty four, and it was stated by a competent banking authority in evidence before the Commission that India needed at least five thousand.

This extension of banking facilities is of transcendental importance. In an address to the University of Delhi last year Sir Basil Blackett committed himself to a remarkable statement.

To some it may sound fantastic in view of this historic habit—reliance on external capital—to talk of India's not supplying the whole of her own capital requirements but also becoming a lender of capital for the development of other countries. Yet I believe firmly that given the necessary development of banking and credit facilities and goodwill and readiness to profit by the counsel and assistance of European businessmen, the time is not very far distant when India will be doing both these things. India would seem by nature to be destined to be a creditor country. If only her people will it so. But Indian resources will not be mobilised without the vehement development of branch banks.

As matters stand this work can only be done by the Imperial Bank and though it is moving it is with desperate slowness. There are one or two features common to most of the hundred new branches it has opened. They attract deposits they facilitate the investment habit but they do not pay to many who are in close touch with Indian conditions it seems that any measure which would weaken the capacity of the Imperial Bank to prosecute this unromantic but imperatively necessary work by the diversion of the Government balances to the Indian Reserve Bank or the division of these balances between the two banks would be a retrograde measure. There are other considerations. The amount of re-discounting to be done in India is not large as the Exchange Banks which finance the export trade re-discount in London which is always likely to be the cheaper market. The number of men in India qualified to act on the directorate of banks is small. Are there enough to constitute the reliable directorates for two great banking institutions? The Commission rather glazes over these difficulties. They think that the Reserve Bank will be able to spare for the Imperial Bank sufficient funds for the Government balances to enable to prosecute the work of opening new branches. Also that a bill market will rapidly develop. But their arguments wear an aspect of special pleading. How ever the issue can be put in a nutshell India must have a Central Bank. It is found impossible to develop even as a temporary measure the Imperial Bank into a Central Bank then there must be a Reserve Bank on the lines sketched in the Report. But if a new Reserve Bank is established it is essential that provision shall be made for the Imperial Bank to enjoy the free use of a sufficient share of the Government balances to enable it vigorously to develop banking facilities in the remotest and this obligation should be made compulsory.

The Note Issue—Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency the actual currency of India is a token the silver rupee and another token the note convertible into rupees. Ever since the breakaway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coinage which followed recovery from the famine of 1899-1900. It compelled heavy purchases of silver which invariably rose in price as the Government came into the market and it placed the Indian currency system as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees at the present fineness is only possible so long as silver does not rise above 482 an ounce. The removal of this anomalous provision the Commission say is an essential step in Indian currency reform which must be taken sooner or later. No opportunity for the termination of this obligatory convertibility is likely to be so favourable at the present when by making the notes convertible into gold bars for all purposes a more solid right of convertibility is attached to them than they have ever had since silver ceased to be a reliable standard of value. Both propositions can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself. It was always convertible on demand but from increased facilities for the encashment of notes beginning with the introduction of universal notes of small denomination and steadily progressing as export once was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them. There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one rupee note which had acquired great popularity before it was discontinued on the ground of economy shall be retained. The legal obligation on the Central Bank will be to give legal tender money either notes of smaller denominations or silver rupees at its option but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. India is suffering from a surfeit of rupees the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Banker's Magazine* which we have quoted extensively above. There was a considerable protest strongest in Western India but abated in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was particularly in Bombay a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be re-vested to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard and the establishment of an organ

isation which would back currency with credit. In Bombay there was started a Currency League with branches in other parts of India, whose main efforts were directed to the ratio and to the idea that the legal ratio should be one and four, not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly which urged that there had not been time to study the Report and that the papers were not available the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect —

After considering the report of the Royal Commission on Indian Currency and Finance the Secretary of State for India in Council in agreement with the Government of India is prepared to accept as a whole the recommendations of the Commission subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session.

The new Ratio — So far from doing the discussion this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten pices per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or at the option of Government sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling fivepence forty one sixths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate but the proposal to establish a Reserve Bank for the control of Currency has not matured owing to differences between the Government and the Legislature as to the exact form of the Bank. World trade depression in the last few years made it increasingly difficult for the Government of India to maintain the statutory ratio but their difficulties were solved when Great Britain went off the Gold standard in September 1931, and the rupee was linked to sterling. By the end of the year exports of commercial gold from India had begun to show their effects, and on December 30th the T. T. rate had risen to 1/8 1/2, compared with 1/5 1/2 on September 18.

The characters of the Reserves which are the backbone of the Indian currency system are shown below —

Composition of the Currency Reserves held against the note circulation at the end of each month (in lakhs of rupees)

THE RESERVE BANK.

An essential part of the scheme formulated by the Currency Commission was the formation of a Reserve Bank to take over the Note Issue, custody of the Government remittances and act as a true banker's bank. The Commission pointed out that India was one of the few great countries where the control of currency was divorced from the control of credit, and where Government carried out immense financial transactions through its own agency and proposed the Reserve Bank as the apex of the new financial system.

The Government accepted these recommendations and in January 1927 introduced a Bill to give effect to the Commission's advice. They proposed a shareholders bank with a commercial directorate tempered by Government nominees, and a new agreement with the Imperial Bank freeing it from some of the restrictions imposed. The Bill was referred to a Select Committee when a marked divergence of opinion was manifested. A majority of the Committee carried recommendations for the transference of a shareholders bank into a State Bank with a strong element of directors selected by the legislatures. This changed Bill was before the legislature in September and was withdrawn by the Government for further consideration. It being understood that the Secretary of State for India objected to the drastic changes made in the original scheme.

These objections to the original scheme have been summarised under the following heads: That a Reserve Bank in charge of the credit and currency should be responsible to the legislature; that only a State Bank would carry the confidence of the people; that a Reserve Bank does not require much capital, and therefore

there was no need to create a body of shareholders and that if a bank with share capital was created there was the risk of it falling under the domination of foreign capitalists or of Indian capitalists in the big cities.

The real ground of objection was the first: the legislature sought to make the Bank responsible to the legislature, that opened the great question whether the Reserve Bank should be commercial or political.

The New Bill—After conferring with the authorities in London the Finance Member published in January 1928 the draft of an entirely new Bill. On the main point it was uncompromising. It provided for a shareholders bank with a capital of five crores of rupees, and it entirely excluded political interest in the management by stipulating that members of the legislature were precluded from becoming directors. On all other points it sought to meet the objections to the original scheme. The provisions in this respect governed the directorate and the qualifications for shareholders. As these are important they are set out here—

The Shareholders—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) No amount in excess of twenty thousand rupees shall be issued to any one person or to any two or more persons jointly and no person shall be allowed to acquire an interest in the share capital of the Bank, whether held in his own right, or held jointly with others or held partly in his own right and partly jointly with others to a value in excess of twenty thousand rupees.

(3) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Madras, Bangalore and Delhi and a separate issue of shares shall be made in each of the areas served by those registers, as hereinafter defined and shares shall not be transferable from one register to another save in accordance with conditions to be prescribed by the Governor-General in Council.

(4) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India but no person shall be registered as a shareholder in more than one register or as a holder of an interest in the share capital of a total nominal value exceeding twenty thousand rupees and no person who is not—

(a) domiciled in India or

(b) a British subject ordinarily resident in India, or

(c) a company registered under the Indian Companies Act, 1913 or a society registered under the Co-operative Societies Act, 1912 or a scheduled bank or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any of His Majesty's dominions and having a branch in British India shall be registered as a shareholder or be entitled to payment of any dividend on any share.

Management.—The essential clauses of the Bill relating to the management of the Bank are—

The general superintendence of the affairs and business of the Bank shall be entrusted to a Board of Directors which may exercise all powers and do all such acts and things as may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting.

Save as expressly provided in this Act—(a) no person may be a Director who is not or has not at some time been—(i) actively engaged in agriculture, commerce, finance or industry or (ii) a director of any company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or of a corporation or company incorporated by or under any law for the time being in force in any place outside British India and (b) no person may be a Director who is—(i) a government official or (ii) an officer or employee of any bank or (iii) a director of any bank, other than a registered society as defined in clause (c) of section 2 of the Co-operative Societies Act, 1912.

The election or appointment as Director of any person who is a member of the Indian Legislature or of a local Legislature shall be void unless within one month of the date of his election or appointment he ceases to be such member and if any Director is elected or nominated as member of any such Legislature he shall cease to be a Director as from the date of such election or nomination as the case may be.

The Board shall consist of the following Directors, namely—(a) a Governor and two Deputy Governors to be appointed by the Governor-General in Council after consideration of any recommendation made by the Board in that behalf (b) four Directors to be nominated by the Governor-General in Council (c) two Directors to be elected by the Associated Chambers of Commerce (d) two Directors to be elected by the Federation of the Indian Chambers of Commerce (e) one Director representing the interest of agriculturists to be elected by provincial co-operative banks holding shares to the nominal value of not less than five thousand rupees (f) eleven Directors to be elected on behalf of the shareholders on the various registers, (g) one government official to be nominated by the Governor-General in Council.

The shareholders registered on the various registers shall elect delegates for the purpose of electing Directors to represent them on the Board and the numbers of delegates shall be as follows namely—(a) for the Bombay register—twenty four members (b) for the Calcutta register—twenty four members (c) for the Madras register—ten members (d) for the Bangalore register—ten members (e) for the Delhi register—twenty four members.

The election of delegates for the shareholders on a register shall be held once in every five years at a convenient time before the expiry of the term of office of the retiring Directors for the election of whose successors the delegates are to be elected.

(5) Delegates shall hold office for a period of five years.

Reception of the Bill.—When the Bill was published many of those who were opposed to the original scheme seemed to be chary of committing themselves to an opinion. But the general attitude may be fairly indicated in these terms. By those who accepted the idea of a shareholders bank the Bill was regarded as a considerable improvement inasmuch as it safeguarded the country against either alien or capitalist control and gave every part of the country and every important interest representation on the directorate. Those who wanted a State or in other terms a political bank stood fast in their opposition and objected the scheme root and branch. There was further criticism that the original Bill having passed through Select Committee and been discussed in the Legislature it was unconstitutional to withdraw it and substitute a fresh measure the correct procedure they maintained was for the original Bill as amended by the Select Committee and the Legislature to be proceeded with. The Bill failed to secure the support of the Legislature and was withdrawn. A new Reserve Bank measure is now under consideration in connection with the inauguration of the Federal constitution.

Trade

India is pre-eminently an agricultural country, and that fact dominates the course of its trade. The great export staples are the produce of the soil—wheat, seeds, cotton and jute. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past, the outturn of the soil was subjected to periodic shocks from famines arising from the failure of the rains when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such years as 1896-97 and 1899-1900. Well over thirty per cent. of the culturable area of the Punjab is under irrigation, and huge new works are in progress to utilize the waters of the Sutlej and of the Indus in Sind. Whilst these great works have been carried out or are in progress to spill on the land the floods of the snowfed rivers of the North, other works of a less imposing character have safeguarded the arid tracts of the South. A chain of storage lakes arrests the rains of the Western Ghats and through canals spreads them over the parched lands of the Deccan. The rivers of the South like the Cauvery are being harnessed to preserve their flood waters for Madras. All over India irrigation works, large and small, are being restlessly pressed forward and their effect is to give a far greater stability to Indian agriculture.

The destination of these surplus crops is another factor of importance. The great customer for Indian cotton is Japan, and to a lesser extent the Continent of Europe. Continental Europe is also a large buyer of her oilseeds and another produce and of her hides and skins. Whilst the United Kingdom is the great market for tea and wheat, foreign countries are very important facts in the Indian export trade, therefore India had a vital interest in the economic recovery of Europe. When the post-war boom collapsed it hit India hard and

for a year or two the export trade reeled under the shock. The progress of the Dawes Plan and the measures taken under the League of Nations to assist Austria and Hungary back to industrial health had a special bearing on the prosperity of India, they have been elements of importance in inducing her recovery of prosperity.

But whilst India is pre-eminently an agricultural country the ranks at the International Labour Office at Geneva as one of the great industrial countries of the world. Her manufacturing industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry which has its home in the town and island of Bombay with important subsidiary centres at Ahmedabad, Sholapur and Nagpur. Next in importance is the jute industry. Raw jute is a virtual monopoly of Bengal and the jute mills are concentrated in and near Calcutta. The metallurgical industry is of more recent growth. The principal centre is Jamshedpur, the seat of the works of the Tata Iron and Steel Company where subsidiary industries have sprung up to utilize the products of the blast furnaces and mills. A very large proportion of the jute manufactures is exported. The cotton textile industry has lost a considerable part of its export trade to Japan, the Far East and East Africa, the mills find their principal outlet in India itself and even there they are subject to severe competition from Japan and China. The iron and steel industry is for the most part a home industry, though large quantities of Indian pig iron are shipped to the Far East, and in some years to the western ports of North and South America. Therefore whilst India is still in the main an agricultural country, three-quarters of her population drawing their sustenance from the soil, her manufacturing industries are of large and growing importance and their prosperity every year affects in an increasing degree the general prosperity of the people.

I.—GENERAL.

Agricultural conditions in India.—The monsoon of 1931 was on the whole well distributed but at a few places heavy rains resulted in floods causing damage to the crops. Averaged over the plains of India, the total rainfall during the monsoon period was only 4 per cent. above the normal. During the retreating period of the monsoon the rainfall was normal or nearly so in Burma, Assam, the North West Frontier Province, Mysore and the Punjab but excessive elsewhere. Taking the year as a whole the total rainfall was within 25 per cent. of the normal except in Sind where it was in large defect and in Bihar, Bombay

and West Rajputana where it was in moderate excess. The season may thus on the whole, be regarded as fairly good from the agricultural standpoint. A good yield was obtained for the rice crop of 1931-32, except in Burma and the total production exceeded the previous year's plentiful harvest by 2 per cent. Sugarcane also gave a record yield which was 21 per cent. above that of 1930-31. The wheat crop of 1930-31 most of which was moved during the year under review was also satisfactory, having exceeded the average of the preceding five years by 8 per cent. Following on two very large crops in succession in 1929 and 1930, the area under

jute was considerably reduced in 1931 and the outturn amounted to only 16 lakhs of bales which is about half the average outturn during the preceding five seasons. The cotton crop of 1931-32 was the lowest since 1931-22 the production being 22 per cent less than in 1930-31. Among the oilseed crops, castor seed gave an increased production in 1931-32 while sesamum and groundnut gave smaller outturns being 12 and 14 per cent less than that of 1930-31. The production of linseed was practically the same as in the preceding season, while that of rape and mustard showed a decrease as compared with 1929-30.

Industrial situation in India—During the year 1931 a greater number of industrial disputes occurred in India a large number of workmen were involved and consequently the loss on man working days was much higher than during the preceding year. The worst sufferers were the

cotton mills in Bombay and in the Madras Presidency and the jute mills in Bengal. The important strikes of the year occurred in the Hindustani Jute Mills, Kishore Hooghly the Madras Mills in the Madras Presidency and the Solapur Mills and the Swadeshi Mills in the Bombay Presidency. The first quarter of the year 1932 has not been marked by any improvement in the situation for during this quarter also there have been frequent labour strikes in cotton and woolen mills in Bombay, Madras and the Central Provinces.

Volume of Trade—The following figures have been compiled to show the values of imports and exports of merchandise on the basis of the declared values in 1922-23. These statistics are necessarily approximate but they are sufficiently accurate to afford a fairly reliable measure of the course of trade—

(In crores of Rupees)

	1913-14	1922-23	1923-24	1924-25	1925-26	1926-27	1927-28	1928-29	1929-30	1930-31	1931-32
Import	183	138	120	137	143	156	181	190	188	167	143
Exports	144	214	240	250	246	228	218	260	263	235	200
Total trade in merchandise excluding re-exports	437	352	360	387	389	384	429	450	452	392	343

The table shows a serious retrogression from the record level attained in the preceding year indicating as it does a decline of Rs. 49 crores on 1913-14 prices in the total trade in merchandise (excluding re-exports). The fall in the value of imports (of private merchandise) in 1931-32 as compared with 1930-31 was Rs. 38.42 lakhs and as compared with 1929-30 Rs. 114.48 lakhs. The fall in the value of exports in the year under review over the previous year and over 1929-30 was Rs. 65.08 lakhs and Rs. 167.38 lakhs respectively. Thus the fall in the case of exports was far greater than in the case of imports. This is due to the fact that the prices of agricultural commodities and raw materials which form the bulk of India's exports fell to a much greater extent than the prices of manufactured goods which form the bulk of India's imports. Had it not been for the fact that an enormous quantity of gold was exported in the year under review the balance of trade in favour of India would have dwindled down to a very negligible figure indeed. Exports of gold and silver to the extent of Rs. 62.61 lakhs however changed the situation and converted a disastrously low balance into the largest

favourable balance since 1925-26. This fall in the value of exports as has been already explained was due to the disastrous fall in the prices of agricultural products. The reason of the fall in the value of imports, however, is not quite so obvious but two main causes clearly suggest themselves the first being the reduced purchasing power of the consumers in India and the second the economic boycott. It is difficult however to allocate satisfactorily the share of the decline due to each of these factors.

Prices in India—Prices in India followed the general collapse elsewhere. The Calcutta wholesale price index number for September 1930 was 148. By September 1931 it had fallen to 91 a fall of over 36 per cent. From September 1931 rupee prices rose to some extent in Calcutta and the index number went up to 98 in December. This partially reflected the depreciation of the rupee in terms of gold. For a time the rupee appreciated to some extent after December and the index number fell slightly, being 94 in March 1932. Since the close of the financial year the fall has been even greater and in June 1932 the index number went to the

lowest figure on record and was 86. Thus, since September 1929 rupee prices have fallen by nearly 40 per cent. In September 1931 the percentage fall was highest in the case of oleo-seeds which amounted to 56 per cent followed closely by wheat and hides and skins 53 per cent and tea and cotton raw with a fall of 51 and 49 per cent respectively. The fall in the case of jute raw was 43 per cent. On the other hand the fall in the case of cotton manufactures was only 27 per cent in the case of metals only 19 per cent and of sugar and other commodities, 18 and 16 per cent respectively. If however we take June 1932 for comparison the greatest fall is in the case of hides and skins which have fallen by 66 per cent and are worth a third of what they were in September 1929. The fall in the case of oleo-seeds and raw jute amount to 59 and 58 per cent respectively whereas in the case of rice and tea the fall is 53 per cent. Raw cotton shows a fall of 48 per cent and wheat of 41 per cent. The fall in the case of jute manufactures is however only 44 per cent that in the case of cotton manufactures only 29 per cent while metals and sugar showed a fall of 21 and 12 per cent respectively. Thus it will be seen that the fall is very great in the case of agricultural commodities and raw materials but comparatively small in the case of manufactured articles. It follows therefore that the price of India exports fell considerably more than the price of her imports and this difference obviously has a very great bearing on the foreign trade of the year.

Imports.—The total value of the imports of merchandise into British India in 1931-32 amounted to Rs. 130 crores and that of the exports to Rs. 161 crores. Compared with the values recorded in 1930-31, these figures represent a decline of Rs. 38 crores or of 23 per cent in the case of imports and of Rs. 65 crores or 29 per cent in that of exports. On the import side the year witnessed a further substantial reduction in India's demand for imported textiles. The fall in the imports recorded under the textile group amounted to one of Rs. 6 crores on a total of Rs. 41 crores recorded in 1930-31. The decline during the year under review was thus 14.5 per cent, but coming on top of the heavy fall (amounting to Rs. 37 crores) of 1930-31 it means a net recession to the extent of 45 per cent in comparison with the import values for 1929-30. As in the previous years the decline under textiles was primarily the effect of a reduction in the imports of cotton piecegoods the total receipts of which amounted to 776 million yards valued at Rs. 14.67 lakhs as compared with 890 million yards valued at Rs. 20.05 lakhs in 1930-31. All the principal descriptions of cotton piecegoods except white had their respective shares in this heavy decrease grey goods declining by 118 million yards and coloured by 24 million yards, white goods on the contrary improved by 8 million yards in quantity although even in this case there was a recession as far as values are concerned to the extent of Rs. 88 lakhs. As is to be expected the retrogression in the trade in cotton piecegoods was mainly due to the falling off in consignments from the United Kingdom notably of grey goods imports of which from that source alone showed a reduction of 83 million yards. Imports of

cotton twist and yarn recorded a slight improvement in quantity from 39.1 million lbs. to 31.6 million lbs. but despite of this quantitative increase the value fell from Rs. 3.08 lakhs to Rs. 2.49 lakhs. There were reductions under some of the other important items included in the textile group—viz. of Rs. 20 lakhs under silk raw and manufactured and of Rs. 49 lakhs under wool and woollens but there was an increase of Rs. 41 lakhs under artificial silk (including yarn and goods of artificial silk mixed with other materials). The imports of raw cotton further rose from 58,000 tons to 70,000 tons concurrently with the progressive decline under piecegoods. Next in order of magnitude to the decline noticed above in regard to the textile group was the reduction in imports under the metal group which amounted to Rs. 6.14 lakhs. It is, however, interesting to note that if along with this group are included in one composite head such items as machinery and millwork hardware, cutlery, implements and instruments as also vehicles, the aggregate decline under this head would mount up to about Rs. 14 crores. Imports of iron and steel declined from 614,200 tons to 471,000 tons in quantity and from Rs. 10.89 lakhs to Rs. 6.32 lakhs in value. It may be of importance to mention that despite of the general depression in this line of trade the percentage share of the United Kingdom in the total imports of iron and steel showed a slight improvement. There was a decline of Rs. 3.42 lakhs under machinery and mill work notwithstanding improvements in certain directions such as cotton and sugar machinery. The value of hardware imported declined from Rs. 3.60 lakhs to Rs. 2.01 lakhs. Imports of motor vehicles declined from Rs. 4.9 lakhs to Rs. 2.80 lakhs, the number of motor cars imported having fallen from 12,600 to 7,200 and that of omnibuses from 8,900 to 4,400. Concomitantly with this reduction under motor vehicles there was a falling off in the imports of rubber manufactures the value of which amounted to Rs. 2.21 lakhs as against Rs. 2.55 lakhs recorded in the preceding year. The sugar trade remained in the doldrums throughout the year the imports having declined from just above 1 million tons valued at Rs. 10.96 lakhs to a little above half a million tons valued at Rs. 6.17 lakhs. It is interesting that despite of this unprecedented slump in sugar imports beet sugar was able to show an increase from 78,000 tons valued at Rs. 87 lakhs to 118,000 tons valued at Rs. 1.25 lakhs. Consignments of mineral oils fell from 242 million gallons valued at Rs. 10.48 lakhs to 217 million gallons valued at Rs. 9.04 lakhs but the decline under this head would have been greater had it not been for a further increase of 4 million gallons under petroleum etc. imports of which amounted to 12.7 million gallons as compared with 8.8 million gallons in 1930-31 and 4.7 million gallons in 1929-30.

Exports.—On the export side the outstanding factor was the slump in the raw cotton trade. Exports of raw cotton fell off from 3,926,000 bales to 2,369,000 bales in quantity and from Rs. 46 crores to Rs. 23 crores in value partly as a result of the depression in the world cotton industry and partly as a result of the higher parity ruling for Indian cotton in the Indian market. There was a relatively small decline

under cotton manufactures the total value of the exports having fallen by Rs 40 lakhs to Rs 4.82 lakhs. Despatches of twist and yarn declined from 25.6 million lbs. to 22 million lbs. Exports of cotton piecegoods improved from 98 million yards to 105 million yards but the gain on the quantity side was more than counterbalanced by the fall in prices which sent down the total declared value from Rs 33.2 lakhs to Rs 3.4 lakhs. Millions in the world market still remained adverse to any improvement in the jute trade and in consequence the downward movement in the export trade in jute continued. The decline in the value of raw and manufactured jute exported amounted to one of Rs 12 crores. Shipments of raw jute declined from 1,470,000 bales to 1,285,000 bales in quantity and from Rs 13 crores to Rs 11 crores in value. Packages of gunny bags receded from 434 millions valued at Rs 1 crore to 489 millions valued at Rs 11 crores and those of gunny cloth from 1.7 million yards valued at Rs 17 crores to 1.62 million yards valued at Rs 10 crores. Lower footings in the value of the shipments declined from Rs 20.88 lakhs to Rs 20.37 lakhs although the total quantity exported remained unchanged at 2,014,000 tons. Exports of wheat which had amounted to 106,500 tons in 1930-31 dropped to 20,200 tons in 1931-32. Shipments of rice advanced in quantity from 2,279,000 tons to 2,377,000 tons but on account of the low level of prices for foodstuffs in the world markets the value declined heavily by Rs 7.83 lakhs to Rs 18.14 lakhs. The tea trade had also a critical year and this was reflected in the shipments of tea which fell by 14.7 million lbs. to 341.6 million lbs. in quantity and by Rs 4.12 lakhs to Rs 19.44 lakhs in value. Shipments of oilseeds amounted to 108,000 tons valued at Rs 14.69 lakhs which meant a decline of 5 per cent in quantity and of 18 per cent in value in comparison with the exports of the preceding year. The decline was mainly due to a falling off in exports of linseed from 2,70,000 tons to 1,20,000 tons. Groundnut and rapeseed however showed increases of 71,000 and 21,000 tons in quantity and of Rs 47 lakhs and Rs 21 lakhs respectively in value. There was a decrease in shipments of hides and skins from 68,000 tons valued at Rs 11.74 lakhs to 40,400 tons valued at Rs 8.92 lakhs. Exports of lac amounted to 404,000 lbs. valued at Rs 1.84 lakhs which represented a decline of 15 per cent in quantity and of 41 per cent in value in comparison with the corresponding figures for 1930-31.

The total value of re-exports amounted to Rs 4.96 lakhs which represented a decline of Rs 48 lakhs in comparison with the value recorded in 1930-31 and of Rs 2.47 lakhs on the basis of that for 1929-30. The year witnessed a further set-back in the re-exports of cotton manufactures (chiefly piecegoods) which dropped from Rs 54 lakhs to Rs 44 lakhs. Shipments of raw skins which constitute one of the major items in the re-export trade of India improved in quantity from 211 tons to 360 tons but the value declined from Rs 1.01 lakhs to Rs 86 lakhs. Re-exports of sugar advanced from 3,400 tons to 5,600 tons. Despatches of raw wool expanded from 5 million lbs. valued at Rs 28½ lakhs to 9 million lbs.

valued at Rs 37 lakhs. As was to be expected this decline in the volume of the re-export trade particularly affected Bombay through which the bulk of the re-export trade of India passes. During the year under review Bombay's share amounted to Rs 2.54 lakhs which meant a reduction of Rs 30 lakhs in comparison with 1930-31 and her percentage share declined slightly from 63 per cent to 61 per cent.

Balance of Trade. The visible balance of trade in merchandise and transport for the year 1931-32 was in favour of India to the extent of Rs 90 crores as compared with Rs 78 crores in the preceding year. Rs 51 crores in 1929-30 and the record figure of Rs 100 crores in 1927-28. The transactions in treasure on private account resulted in a net export of treasure amounting to Rs 10½ crores as against a net import of Rs 4 crores in 1930-31. Gold showed a net export of Rs 25 crores and silver a net import of Rs 2½ crores. Net exports of currency notes amounted to Rs 26 lakhs.

Tariff Changes. The changes in the tariff made under the Steel Industry (Protection) Act, the Cold Storage Industry (Protection) Act, the Indian Linens, the Salt (Additional Import Duty) Act, and the Wheat (Import Duty) Act all of 1931 were dealt with in the preceding series review. Since then eight Acts have been passed introducing various changes in the tariff.

The Indian Linens (Supplementary and Extending) Act 1931 was passed on the 28th November 1931 but came into force provisionally with effect from the 30th September 1931. By this Act raw cotton dyed derived from coarser and coarser derivatives used in any dyeing process and certain classes of machinery were removed from the free list and made liable to duty at the following rates—

Raw cotton—5 pias per lb. and coarser dyes and machinery—10 per cent *ad valorem*.

The Act also raised the duties on sugar inferior to 23 D 4 but not inferior to 5 D 4 from Rs 8.12 to Rs 7.4 per cent on artificial silk yarn from 10 per cent to 15 per cent *ad valorem* on artificial silk mixtures from 20 per cent to 27½ per cent *ad valorem* on artificial silk piecegoods or other manufactures of artificial silk on cambric and on electric bulbs from 20 per cent to 30 per cent *ad valorem* and on printers' ink from 5 per cent to 8 per cent *ad valorem*. The Act further prescribed, as an alternative to the existing duty of 20 per cent *ad valorem*, a minimum specific duty of 4 as per pair on boots and shoes.

A surcharge of 25 per cent of the duty other than chargeable under the Indian Tariff Act 1931 as subsequently amended or under any of the provisions thereof read with any other enactment or with any notification of the Governor General in Council for the time being in force was also imposed on all goods liable to import duty including those mentioned above except raw cotton, certain classes of dyes and colours and machinery, and all articles liable to a duty of 2½ per cent *ad valorem*, which are exempt from this surcharge. The surcharge is also leviable on salt, motor spirit, kerosene, and silver which are liable to an excise duty.

The Heavy Chemical Industry (Protection) Act, 1931, which was passed on the 1st October 1931 gave effect to some of the recommendations of the Tariff Board in their Reports on the grant of protection to the heavy chemical industry and to the magnesium chloride industry. It removed magnesium chloride from the free list and imposed on this and certain other heavy chemicals protective duties at various rates with the proviso that the duty on any of these articles shall in no case be less than the duty which would be charged if the article were included in Part V of Schedule II to the Indian Tariff Act, 1894 (i.e. 25 per cent *ad valorem* for the time being). These duties will remain in force till the 31st March 1933 except in the case of magnesium chloride which shall have effect up to the 31st March 1930. The Act also provides for the enhancement of the duty on magnesium chloride if at any time during the currency of the Act it is found on enquiry that the protection granted to the magnesium chloride industry has proved ineffective.

The Wheat Import Duty (Extending) Act, 1932, and the Salt Additional Import Duty (Extending) Act, 1932, which were passed during March 1932 extended the dates of operation of the temporary customs duty on wheat and wheat flour, and the temporary additional customs duty on salt to the 31st March 1933.

The Wire and Wire Nail Industry (Protection) Act, 1932, which was passed on the 5th March 1932 gave effect to the recommendations in the Tariff Board's Report on the grant of protection to the wire and wire nail industry by bringing again under the protective tariff wire other than barbed or stranded fencing wire, wire rope or wire netting and wire nails and imposing thereon a duty of Rs. 45 per ton. These duties shall have effect up to the 31st March 1934, but they are exempt from the 25 per cent surcharge imposed by the Indian Finance (Supplementary and Extending) Act 1931.

The Bamboo Paper Industry (Protection) Act, 1932, which was passed on the 5th March extended the dates of operation of the Bamboo Paper Industry (Protection) Acts of 1920 and 1927 to the 31st March 1930. It also altered from 60 to 70 the maximum percentage of

mechanical wood pulp in the fibre content of printing paper which is assessable at the protective rate under Item No. 155 of Schedule II to the Indian Tariff Act 1894 as subsequently amended, and transferred wood pulp from the free list to the protective tariff by imposing thereon a specific duty of Rs. 45 per ton. This duty shall also remain in force till the 31st March 1930.

The Sugar Industry (Protection) Act, 1932, was passed on the 8th April. It transferred sugar and sugar candy excluding confectionery from the non-protective special tariff to the protective tariff. The change was more or less formal the only immediate effect being to raise the duty on sugar below 8 D 8 and sugar-candy to the same level as that on white sugar i.e. Rs. 74 per cwt. the duties on other kinds of sugar having already been enhanced under the Indian Finance Act 1931 and the Indian Finance (Supplementary and Extending) Act 1931. These duties shall in the first instance have effect up to the 31st March 1935 but if at any time during the currency of the Act, it is found after enquiry that foreign sugar is being imported at such a price as to render the existing protection ineffective this rate may be enhanced.

The Indian Tariff (Wireless Broadcasting) Amendment Act, 1932 was passed to provide funds to enable Government to continue wireless broadcasting in India by increasing the import duty leviable on wireless reception instruments and apparatus and component parts thereof including all electric valves, amplifiers and loudspeakers which are not specially designed for purposes other than wireless reception or are not original parts of and imports of alone, with instruments or apparatus so designed, to a special non-protective rate of 50 per cent *ad valorem*. This duty is, however, exempt from the general 25 per cent surcharge.

In addition to the statutory changes mentioned above, the period of operation of the additional protection accorded to iron and steel galvanneal sheets and articles made therefrom has been extended to the 31st March 1933 under section 3 (4) of the Indian Tariff Act 1894.

Imports of Merchandise

885

II—IMPORTS OF MERCHANDISE.

The following table shows the comparative importance of the principal articles imported into British India —

—	IMPORTS					Percentage of total imports of merchandise in 1931-32
	1927-28	1928-29	1929-30	1930-31	1931-32	
Cotton and cotton goods	71 40 10	67 15 14	62 90 88	51 04 57	28 18 61	20 72
Machinery and millwork	16 94 75	18 36 04	18 21 85	14 34 78	10 02 14	8 64

Cotton Manufactures (Rs. 19 15 Lakhs)—The total value of the imports of cotton manufactures in the year under review amounted to Rs. 19 15 lakhs as against Rs. 21 25 lakhs in the preceding year and Rs. 59 48 lakhs in 1929-30. Thus there was a decline of 24 per cent as compared with 1930-31 and 68 per cent as compared with 1929-30. Imports of cotton twist and yarn amounted to Rs. 4 million lbs. valued at Rs. 2 99 lakhs as against 20 1 million lbs. valued at Rs. 3 08 lakhs in the preceding year and 43 9 million lbs. with a declared value of Rs. 6 00 lakhs in 1929-30. The decline in value as compared with the preceding year was therefore 3 per cent and 50 per cent as compared with 1929-30. Imports of piece-goods in the year under review were 776 million yards valued at Rs. 14 67 lakhs as compared with 680 million yards value at Rs. 20 05 lakhs in 1930-31 and 1,919 million yards valued at Rs. 50 23 lakhs in 1929-30. The decrease in yardage as compared with the preceding year was therefore 14 per cent but as compared with 1929-30 it was 60 per cent. These figures show that the further decline in the year under review was of smaller dimensions than the huge fall of the preceding year 1930-31. Naturally this was to be expected as the figures of the preceding year showed the first large effects of such abnormal causes as the reduced purchasing power of the consumers and the boycott. As compared with 1929-30 the last fairly normal year the fall is seen to be of enormous magnitude both in quantity and value.

The causes which were given in the previous issue of this Review of 1931 to explain the enormous fall in the imports of cotton manufactures in 1930-31 as compared with the preceding year continued in operation in the year under review. In the main they are (a) the lowered purchasing power of the consumer in India and (b) the political situation in the country. Added to these also there were considerable increases in the import tariff on cotton manufactures in the Budget of 1931 and in the emergency Budget of September 1931 and further the

effect of the increased internal production in Indian mills must not be forgotten. It is difficult however by analysis to apportion the separate effect of each of these factors. There is no point in comparing the figures of 1931-32 with those of 1930-31 as the latter was also an abnormal year which suffered from the causes mentioned above. In order therefore to gauge the fall effect of these causes in 1930-31 and 1931-32 a comparison may be made of the import figures of the year under review with those of 1929-30 which was the most recent comparatively normal year i.e. the year in which both the lowered purchasing power and the boycott were absent throughout the following paragraphs therefore where the effects are discussed the year 1929-30 will be used for purposes of comparison. If the percentage decline in the case of cotton piece-goods imports in the year under review as against 1929-30 is compared with the percentage decline in the case of other articles in general the comparison will also some idea of the effect of the boycott in the case of cotton piece-goods imports. Elsewhere it has been seen that the total decline in the value of imports of all commodities into India in 1931-32 as compared with 1929-30 amounted to Rs. 114 43 lakhs or 47 5 per cent whereas the decline in the case of cotton manufactures for the same period amounted to Rs. 40 33 lakhs or 68 per cent. In comparison with these figures the decline in value under machinery was 40 per cent under sugar 61 per cent, under metals 59 per cent under hardware including cutlery and instruments 42 per cent under vehicles 58 per cent and under chemical and drugs, etc. 13 per cent. Taking the effects of other causes on the various classes was of the same order of magnitude, it will thus be seen that the magnitude of the decline in value of imports of cotton manufactures was greater than that in the case of other articles. Actually in the case of sugar the increase in the import tariff was much heavier than for cotton manufactures while vehicles including motor cars are luxury articles and are more sensitive to trade depression.

It may be surmised therefore that the boycott which was aimed most directly at imported cotton piecegoods was responsible to some considerable extent for the reduction of imports under the head of cotton manufactures. On the other hand however there can be no doubt

whatever that a large part of the decline was due to the reduced purchasing power of the consumer in India and a part was probably due to the enhanced customs duties levied on this class of goods in 1911.

The value of the different classes of cotton manufactures imported during the past five years and the pre-war year 1913-14 is set forth below—

	1918-14 (pre war year)	1927-28	1928-29	1929-30	1930-31	1931-32
	Rs (lakhs)	Rs (lakhs)	Rs (lakhs)	Rs (lakhs)	Rs (lakhs)	Rs (lakhs)
Twist and yarn	4.16	6.70	6.20	6.00	8.08	2.90
Piecegoods—						
Grey (unbleached)	25.45	21.21	20.19	20.03	6.87	3.92
White (bleached)	14.29	11.42	15.33	13.27	6.20	5.33

Kents of all descriptions	54	94	94	90	16	37
Total Piecegoods	54.14	54.14	54.81	49.22	20.05	14.67
Hosiery	1.20	1.76	1.46	1.44	98	45
Handkerchiefs and shawls	89	17	16	17	5	2
Thread	33	77	71	81	60	54
Other sorts	1.52	92	82	82	59	45
Grand Total	66.90	66.16	63.24	69.40	25.25	19.15

Cotton Twist and yarn (Rs. 2.90 lakhs).—The imports of cotton twist and yarn amounted to 31.6 million lbs in quantity and Rs. 4.99 lakhs in value in 1913-14 as compared with 29 million lbs and Rs. 4.08 lakhs in 1930-31 and 45.9 million lbs and Rs. 6.00 lakhs in 1929-30. The quantity of yarn imported in the year under review increased by nearly 21 million lbs as compared with the previous year though there was a decline in value of Rs. 9 lakhs. As compared with 1929-30 however there was a decrease of 12.3 million lbs or 27 per cent the decline in value being over Rs. 3 crores or 50 per cent. The average declared value per lb of yarn imported during the year was Rs. 0.152 as compared with Rs. 1.011 in 1930-31 and Rs. 1.310 in 1929-30. Of the total imports 11.9 million lbs came from the United Kingdom, 19.2 million lbs from China and 6.3 million from Japan. Imports from these countries in 1929-30 were 20—1 million lbs, 10.6 million lbs and 10 million lbs respectively. The imports from the United Kingdom decreased by a little over 8 million lbs as compared with 1929-30 though they showed an increase of about 14 million lbs as compared with 1930-31. Imports from Japan showed a decline of about 44 million lbs as compared with 1929-30 and half a million lbs as compared with 1930-31 whereas imports from China showed an increase of 2.7 million

lbs as compared with 1929-30 and 1.5 million lbs as compared with 1930-31. The year therefore still showed a considerable decline in the imports from the United Kingdom as compared with 1929-30 although it showed a slight increase over 1930-31. There was a slight decrease in the case of Japan also but as mills in China are largely owned by Japanese interests the reduction in the case of Japan is of less importance to her as China has increased her exports by about 21 million lbs compared with 1929-30. Other sources of imports of yarn into India included Italy (112,000 lbs) and Switzerland (51,000 lbs). Imports from other countries amounted to 47,000 lbs.

Cotton piecegoods (Rs. 14.67 lakhs).—The imports of cotton piecegoods including kents decreased from 1,819 million yards in 1929-30 to 776 million yards in 1931-32 a decline of over 1,100 million yards or 60 per cent. As compared with 1930-31 the decline was only about 100 million yards or 13 per cent. The decrease in value was from Rs. 50 crores in 1929-30 to Rs. 20 crores in 1930-31 and Rs. 14.7 crores in 1931-32 thus showing a drop of Rs. 5.4 crores or 27 per cent from the previous year and a drop of Rs. 35.6 crores or 71 per cent from 1929-30. Compared with the pre-war year 1913-14 the imports of 1931-32 were less by 2,422 million yards. The figures

for the three important classes of cotton piece-goods from 1914 onwards are given in the following table —

Year	Grey (unbleached)	White (bleached)	Coloured printed or dyed
Year	Million yards	Million yards	Million yards
1918-14	1 534 2	702 3	831 8
1914-15	1 420 4	604 2	494 8
1915-16	1 148 2	611 4	358 7
1916-17	847 0	589 8	444 9
1917-18	62 0	602 3	395 6
1918-19	48 4	286 0	227 3
1919-20	533 3	322 0	268 8
1920-21	590 2	421 8	480 3
1921-22	636 6	306 2	198 3
1922-23	681 0	402 5	243 8
1923-24	704 0	410 3	347 5
1924-25	847 5	548 0	407 0
1925-26	709 1	46 1	305 8
1926-27	748 4	571 0	447 4
1927-28	875 5	5 5 5	504 8
1928-29	836 6	5 5 1	508 9
1929-30	922 5	473 6	483 5
1930-31	860 0	271 0	245 7
1931-32	249 4	279 7	223 2

It appears from the above table that in the year under review imports of grey goods declined still further from the last year a low figure and amounted to 249 million yards only as compared with 860 million yards in the preceding year and 925 million yards in 1929-30. This is the lowest figure on record for the last 30 years. This decrease was shared both by plain grey goods and bordered grey goods, the decline in the former being somewhat less than in the latter. The imports of plain grey goods amount to 106 million yards in 1931-32 as compared

with 194 million yards in 1930-31 and 423 million yards in 1929-30, thus showing a decline of 28 million yards as compared with the preceding year and 267 million yards as compared with 1929-30. Imports of bordered grey goods fell to 83 million yards as compared with 171 million yards in the previous year and 302 million yards in 1929-30 showing a decline of 88 million yards as compared with 1930-31 and 419 million yards as compared with 1929-30. Imports of white goods increased by nearly 8 million yards in the year under review as compared with the preceding year but as compared with 1929-30 the imports showed a decline of 194 million yards or 41 per cent. Coloured goods fell to 223 million yards in 1931-32 as compared with 483 million yards in 1930-31 and 483 million yards in 1929-30 thus showing a decline of 54 per cent as compared with 1929-30. As far as values are concerned the imports of grey goods showed a further decline of nearly Rs. 3 crores as compared with the preceding year and amounted to slightly under Rs. 4 crores as compared with Rs. 7 crores in the previous year and Rs. 31 crores in 1929-30. The value of white goods declined by nearly a crore as compared with the previous year though there was an increase in the quantity imported. As against 1929-30 the fall in value amounted to nearly Rs. 8 crores. Imports of coloured goods declined in value by nearly Rs. 13 crores as compared with the preceding year and by Rs. 10 crores as compared with 1929-30. The declared value of grey goods declined from 3 as 7 p in 1929-30 and 3 as in 1930-31 to 2 as 6 p in 1931-32. The decline in the case of white goods was from 4 as 6 p in 1929-30 and 3 as 8 p in 1930-31 to 3 as 1 p in 1931-32 whereas the declared value of coloured goods fell from 5 as in 1929-30 and 4 as 5 p in 1930-31 to 3 as 8 p in 1931-32. The following table shows the declared value per yard of the three kinds of goods for a number of years —

Cotton piecegoods	1914-15	23 24	24 25	25-26	26 27	27 28	28 29	29 30	30 31	31 32
	A p	A p	A p	A p	A p	A p	A p	A p	A p	A p
Grey (unbleached)	2 8	0 3	5 5	4 11	4 2	3 11	3 10	3 7	3 0	2 6
White (bleached)	2 11	6 0	5 11	5 6	4 11	4 5	4 5	4 8	3 8	3 1
Coloured printed or dyed	3 5	8 2	7 10	6 11	6 2	5 7	5 6	0 4	6 5	8 8

The imports of coloured printed and dyed goods from 1925-26 are set forth below —

	1925-26		1926-27		1927-28		1928-29		1929-30		1930-31		1931-32

Cotton Imports

889

Imports in the year under review in all the three lines declined as compared with the preceding year but the decline was almost negligible in the case of printed and dyed goods as compared with 1929-30 the decline was of considerable dimensions. Under printed goods the quantity imported was 105 million yards as compared with 196 million yards in 1930-31 and 260 million yards in 1929-30. Imports of dyed goods amounted to 91 million yards which was almost the same figure as in 1930-31 but the decline in value was from Rs 2.60 lakhs to Rs 2.29 lakhs. As compared with 1929-30 however the decline in quantity and value was 55 million yards and Rs 2.67 lakhs respectively. Imports of woven coloured goods fell to 25 million yards as compared with 46 million yards in 1930-31 and 132 million yards in 1929-30. The detailed figures relating to the imported piecegoods are given below in millions of yards—

Grey (unbleached)	1913-14 (pre war year)	1929-30	1930-31	1931-32
Dhatis saris and scarves	806.1	801.1	171.9	88.6
Jaconets madraspollans mulls etc	150.4	19.0	19.3	2.7
Long cloth and shirtings	545.4	340.1	166.1	133.8
Shirtings	2	14.7	4.1	1.7
Drills and jeans	21.8	13.4	2.4	2.9
Other sorts	10.8	3.2	1.0	1.7
Total	1,534.2	928.5	365.0	249.4
White (bleached)	1913-14 (pre war year)	1929-30	1930-31	1931-32
Dhatis saris and scarves	104.3	45.5	15.4	1.9
Jaconets madraspollans mulls etc	307.9	219.7	115.2	157.2
Long cloth and shirtings	114.3	104.1	71.9	79.8
Shirtings	204.7	63.3	25.0	21.5
Drills and jeans	5.7	6.6	1.8	4.1
Checks spots and stripes	18.1	12.0	3.7	3.8
Wills	8.3	10.8	7.7	3.7
Other sorts	31.0	15.8	8.0	9.7
Total	794.3	478.0	271.8	279.7
Coloured printed or dyed	1913-14 (pre war year)	1929-30	1930-31	1931-32
Dhatis saris and scarves	175.2	93.0	19.1	8.7
Cambrics etc	113.6	43.5	20.5	19.7
Shirtings	152.6	105.6	54.7	62.9
Prints and checks	209.7	61.3	33.7	23.0

Checks spots and stripes	19.7	26.2	12.5	5.1
Tweils	31.4	36.6	16.0	17.8
Other sorts	159.0	90.7	55.9	53.1
Total	831.8	483.5	245.7	229.2

Under greys the decreases noticed last year were further increased in the year under review imports under dhatis went down from 171 million yards to 88.6 million yards or a fall of 87 million yards. Compared with 1929-30, this meant a fall of 417 million yards. Similarly under longcloth and shirtings there was a decrease of about 33 million yards as compared with the preceding year, or 266 million yards as compared with 1929-30. Jaconets on the other hand showed a slight increase on the preceding years

the increase amounting to about 4 million yards. Compared with 1929-30, imports of jaconets showed a decline of 29 million yards. Under white goods most of the items showed small increases on the preceding year, whilst against the figure of 1929-30 there were considerable decreases. Imports of jaconets showed an increase of 20 million yards on 1930-31, but compared with 1929-30 there was a fall of 55 million yards. Imports under longcloth and shirtings amounted to nearly 80 million yards as against 72 million

yards in the previous year, but as compared with 1929-30 there was a decline of 24 million yards. Of the other hand shuttle shawls and scarves as well as minicool showed declines of 13 million yards and 4 million yards compared with the preceding years. Compared with 1929-30 there was, of course a considerably larger gap in the imports. In coloured goods most of the articles except shirtings and twills showed declines when placed against the figures of the preceding year and as compared with 1929-30 there was a decline of 10 million yards. Under shirtings increased from 55 million yards to 63 million yards though compared with 1929-30 the imports showed a fall of 12 million

yards. Under twills the increase was from 16 million yards to 18 million yards though the latter figure was nearly half of what was imported in 1929 '30. Imports under dhutis, prints and chintis showed decreases of 10 million yards and 11 million yards respectively whereas imports under cambrics and drills and jeans were almost of the same magnitude as in the preceding year.

The percentage shares in 1913-14 and in the past five years, of the United Kingdom and Japan the two principal competitors for the Indian piecegoods import trade in each of the three important classes of piecegoods are set forth below —

Percentage shares of the United Kingdom and Japan in the imports of cotton piecegoods

	1913-14		1927-28		1928-29		1929-30		1930-31		1931-32	
	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan
Cotton piecegoods—												
Grey	98	5	74	23	69	28	56	42	59	23	74	23
White	98	5	94	1	86	13	93	13	84	9	74	8
Coloured	92	2	67	20	82	11	57	31	60	30	40	42

As in the previous year, the share of Japan in the United Kingdom's goods imports from Japan in 1929 was 1.4 per cent. The share of the United Kingdom decreased correspondingly. The share of Japan in grey goods has been increasing rapidly since 1928, when it was only 29 per cent. In 1929, however, it went up to 42.5 per cent. In 1930 it had risen to 60 per cent, and in the year under review it reached the striking figure of over 74 per cent. The increase in the Japanese share is largely due to the fact that for the first time the Japanese have offered their goods on other than the share of the United Kingdom has been consistently diminishing in the last five or six years, but particularly in the last four years. In 1925, 26 the share of the United Kingdom under grey goods was 79 per cent. In 1929 it had fallen to 69 per cent. In 1930 it dropped to 61 per cent, and in the year under review it fell to 50 per cent. In 1930 it was 191, 3 per cent, a much smaller magnitude than in the preceding years. The shares in those years being only 39 per cent.

and 24 per cent respectively. As regards white goods, Japan has been making considerable progress in the last three years. In 1929-30 Japan's share in white goods was under 3 per cent. In 1930-31 it had risen to over 10 per cent and in the year under review it had more than doubled itself and was over 21 per cent. On the other hand the share of the United Kingdom declined from 92 per cent in 1929-30 to 74 per cent in 1931-32. In coloured goods, however, it was 74 per cent in 1929-30 and 69 per cent in 1931-32. In the United Kingdom market from the United Kingdom. The share of the United Kingdom dropped to 49 per cent in 1931-32 as compared with 60 per cent in the preceding year and nearly 58 per cent in 1929-30. Japan's share on the other hand was 42 per cent in the year under review as compared with 30 per cent in the previous year and 12 per cent in 1929-30. The average share of the principal sources in the total imports of piecegoods into India are shown below:—

Percentage shares in the total quantities of merchandise imported

[illegible]

The outstanding feature of the table is the definite and continuous trend in opposite directions of the percentage figures of the United Kingdom and of Japan during the past nine years. Japan increased her share from 35.1 per cent in 1930-31 to 47.6 per cent in 1931-32. The share of the United Kingdom on the other hand further declined from 58.8 per cent to 49.4 per cent. Thus the share of the United Kingdom was reduced from 97 per cent in 1918-19 to almost one half of that in 1931-32 whereas Japan from a position of no importance whatever increased her share enormously and is now responsible for only a little less than half the total quantity of piecegoods imported into India.

Of the total quantity of piecegoods imported 29 per cent was received in Bengal in the year under review as compared with 39 per cent in the previous year. The share of Bombay was 22 per cent, those of Sind and Madras which amounted to 20 and 9 per cent in 1930-31 stood at 28 and 8 per cent respectively in the year under review. Similarly there was an increase in the share of Burma to 13 per cent in the year under review as compared with 12 per cent in the preceding year.

Artificial silk (Rs. 3.44 lakhs).—The trade under this head increased considerably in quantity as compared with either the preceding year or even with 1929-30 but the value of the trade though more than in 1930-31, was less than that in 1929-30. This of course was due to the great fall in the average declared value of piecegoods which amounted to 4 as 6 p per yard in 1931-32 as compared with 6 as 7 p per yard in the preceding year and 6 as 11 p per yard in 1929-30. Imports of artificial silk yarn in the year under review amounted to nearly 8 million lbs valued at Rs. 82 lakhs as compared with 7.1 million lbs valued at Rs. 81 lakhs in the preceding year and 7.4 million lbs valued at Rs. 69 lakhs in 1929-30. The share of the United Kingdom fell to a little under a million lbs as compared with just over a million lbs last year and 1.4 million lbs in 1929-30. Imports from Italy went down from 4.5 million lbs to 3.9 million lbs whereas imports from the Netherlands went up from three-fourths of a million to a little over a million lbs. Of the total quantity imported Italy contributed 49 per cent the United Kingdom 12 per cent and the Netherlands 13 per cent. The share of France rose considerably from 121,000 lbs to 227,000 lbs.

As regards piecegoods of cotton and artificial silk the outstanding feature as in the previous year was the enormous growth of the imports from Japan under this head. The total imports of these piecegoods in the year under review were 84.6 million yards valued at Rs. 2.52 lakhs as against 51.5 million yards valued at Rs. 2.12 lakhs in the previous year and 56.6 million yards valued at Rs. 3.15 lakhs in 1929-30. The share of Japan in the total imports of 84.6 million yards was 74.5 million yards or 88 per cent. Japan's share in the previous year was only 38.2 million yards and in 1929-30 it was 25 million yards. Thus Japan has trebled her imports in two years.

As has been remarked in the paragraphs about cotton piecegoods Japan was exporting to India pure artificial silk cloth in bright colours and attractive designs and at prices as low as

4 annas to 5 as per yard. At such rates artificial silk piecegoods were replacing the better type of printed and dyed cotton goods. It may be interesting to note that the declared value per yard of Japanese piecegoods of cotton and artificial silk mixed was 4 as 6 p in the year under review as compared with 6 as 4 p in the preceding year and 6 as 11 p in 1929-30. As against this the declared value of the Italian imports under the same head was 4 as 11 p in 1931-32, 5 as 8 p in the preceding year and 7 as 2 p in 1929-30. Similarly the declared value of the imports from the United Kingdom was 4 as 4 p in the year under review as compared with 6 as 6 p in 1930-31 and 6 as 2 p in 1929-30. As a result of the low and attractive prices of imports from Japan the other countries were more or less ousted from the market. The share of Italy declined a little further from 5.6 million yards in 1930-31 to 5.2 million yards whereas in 1929-30 Italy's share was 11.7 million yards. Similarly the share of the United Kingdom declined from 7.2 million yards in 1929-30 to 3.4 million yards in 1930-31 and to 1.6 million yards in 1931-32. The share of Switzerland also declined to a little under 2 million yards as compared with 3.2 million yards in the previous year and 6.8 million yards in 1929-30. The shares of other countries also declined considerably.

Silk, raw and manufactured (Rs. 2.74 lakhs).—The imports of raw silk declined from 1.9 million lbs valued at Rs. 88 lakhs in 1930-31 to 1.6 million lbs valued at Rs. 62 lakhs in 1931-32. The predominant supplier of raw silk as usual was China including Hongkong which supplied 1.5 million lbs that is almost the whole of the imports into India. Imports from Japan, the only other source worth mentioning increased from 17,000 lbs in 1930-31 to a little under 34,000 lbs in 1931-32. The imports of silk yarns, nobs and warps increased from 1.4 million lbs in 1930-31 to 1.7 million lbs but there was a slight decline in value from Rs. 52 lakhs to Rs. 51 lakhs. Imports in 1929-30 were a little under 2 million lbs valued at Rs. 72 lakhs. This year Italy was the largest supplier accounting for 622,000 lbs valued at Rs. 19 lakhs as compared with 432,000 lbs valued at Rs. 18 lakhs in the preceding year. Imports from China declined from 998,000 lbs valued at Rs. 13 lakhs to 843,000 lbs valued at Rs. 14 lakhs. The share of Switzerland went up from 129,000 lbs valued at Rs. 55 lakhs in 1930-31 to 239,000 lbs valued at Rs. 104 lakhs in 1931-32. The share of Japan went down from 238,000 lbs to 116,000 lbs.

Imports of silk piecegoods increased in quantity from 16.7 million yards in 1930-31 to 19.9 million yards in 1931-32 but compared with 1929-30 the imports were still down by 3 million yards. The value of the imports in the year under review was almost the same as in the preceding year but compared with 1929-30 there was a fall of Rs. 98 lakhs. As usual the bulk of the supplies came from China and Japan which together sent 10.6 million yards or nearly the whole of the imports. China's share was slightly reduced, being 7.8 million yards as compared with 8.4 million yards in the preceding year. Japan's share in the year under review increased considerably on the figures of the preceding year and amounted to 11.7 million yards as against 7.8 million yards

in 1930-31. Her share in 1929-30 was 13.4 million yards.

Wool, raw and manufactured (Rs 1.92 lakhs).—There was a decrease of Rs. 69 lakhs in the value of imports under this head as compared with the preceding year and of Rs. 2.46 lakhs as compared with 1929-30. The decrease in the year under review as compared with the preceding year was wholly confined to woollen manufactures. Imports of raw wool increased from 3.1 million lbs. valued at Rs. 18½ lakhs in 1930-31 to 6.7 million lbs. valued at Rs. 31 lakhs in 1931-32. The imports in 1929-30 were also 6.7 million lbs., but the value was Rs. 6½ lakhs. Australia and Persia were the two important sources of supply. Australia sent 2.9 million lbs. valued at Rs. 15 lakhs in 1931-32, as compared with 1.8 million lbs. valued at Rs. 10 lakhs in the preceding year and 2.4 million lbs. valued at Rs. 22 lakhs in 1929-30. The share of Persia was a little under 2 million lbs. valued at about Rs. 5 lakhs as compared with 9 million lbs. valued at Rs. 3 lakhs in 1930-31 and 2.4 million lbs. valued at Rs. 9 lakhs in 1929-30. The United Kingdom sent just under a million lbs. valued at Rs. 8½ lakhs as compared with 4 million lbs. valued at Rs. 5 lakhs in the preceding year. Imports of worsted yarns for weaving were almost the same as in the preceding year amounting to 568,000 lbs. as compared with 569,000 lbs. in 1930-31. The value however declined from Rs. 11 lakhs to Rs. 9 lakhs. Imports of knitting wool went up from 538,000 lbs. in 1930-31 to 739,000 lbs. in 1931-32 though the value showed a slight decline from Rs. 13.3 lakhs to Rs. 14.1 lakhs.

Imports of woollen piecegoods in 1931-32 decline by over 2 million yards as compared with the preceding year and by nearly 7 million yards as compared with 1929-30. Imports in the year under review amounted to 5.6 million yards as compared with 7.7 million yards in the preceding year and 12.6 million yards and 16 million yards in 1929-30 and 1928-29 respectively. The decline in value was even greater. In 1928-29 the value of imports was Rs. 2.84 lakhs. In the following year it had fallen to Rs. 2.33 lakhs. In 1930-31 it reached a comparatively low figure of Rs. 1.50 lakhs, whereas in the year under review it had shrunk to Rs. .69 lakhs. Thus while imports had shrunk in quantity to nearly one-third of what they were three years ago the value had declined to nearly one-fourth. Imports from the United Kingdom amounted to 1.5 million yards valued at a little under Rs. 25 lakhs in the year under review as compared with 2 million yards valued at Rs. 48 lakhs in the preceding year. 8.7 million yards valued at Rs. 91 lakhs in 1929-30. Imports from Italy also declined from 2 million yards valued at Rs. 25 lakhs in 1930-31 to 1.4 million yards valued at Rs. 15 lakhs in 1931-32. Imports from France were about the same as last year, a little over 2 million yards but the decline in value was from Rs. 24 lakhs to Rs. 18 lakhs. The shares of Germany, the Netherlands, Belgium and Japan went down in the year under review as compared with the preceding year. The average declared value per yard of the French supplies was 12 as 8 p of those from United Kingdom Rs. 1.14 8 and from Italy Rs. 1.1-6.

Metals and manufactures thereof (Rs. 9.77 lakhs).—The imports of metals and manu-

factures thereof declined by 251,000 tons or 38 per cent in quantity from 669,000 tons in 1930-31 to 418,000 tons in 1931-32 and by Rs. 6 crores or 39 per cent in value from Rs. 16 crores to Rs. 10 crores. Iron and steel represented Rs. 64 crores of this total as compared with Rs. 11 crores in 1930-31 and ranked to the fifth place in order of importance among India's imports the first four being cotton manufactures, machinery and millwork, mineral oils and raw cotton. If such items as machinery and millwork, hardware, cutlery implements and instruments and vehicles are grouped with metals and manufactures thereof under one head the total value would aggregate Rs. 32½ crores, while the value of yarn and textile fabrics which had prior to 1930-31 formed the next important group among India's imports amounted to Rs. 27 crores in the year under review. In the preceding year the metals group accounted for Rs. 47 crores while the textile head totalled Rs. 33½ crores.

Iron and steel (Rs. 6.32 lakhs).—The world's production of both pig iron and steel estimated at 56 million and 70 million tons respectively in 1931 was the lowest recorded since 1922 and showed a fall of 29 per cent in the case of pig iron and of 25 per cent in the case of steel as compared with the preceding year. The depression in the iron and steel industry was universal but the degree to which the different producing countries were affected varied somewhat. In the case of the United Kingdom pig iron production fell by 40 per cent from 6.2 million tons in 1930 to 3.7 million tons in 1931, leaving out of account 1921 and 1922—the years of prolonged industrial dispute, was the lowest since the 18th century, while steel output declined by 29 per cent from 7.8 million tons to 5.2 million tons, the lowest since the beginning of the present century excepting again the two years referred to above. There were also similar decreases in production in the United States of America and Germany while France, Belgium and Luxembourg showed much smaller declines compared with 1930. Moreover unlike the United Kingdom all the Continental countries succeeded in maintaining a comparatively high rate of exports by reducing their prices to a low level but the suspension of the gold standard by Great Britain in September 1931 brought about a change.

In India the imports of all classes of iron and steel, including pig iron and old iron or steel in 1931-32 were lower than in any year since the close of the War and amounted to 371,000 tons as compared with 614,000 tons in the preceding year representing a fall of 40 per cent. Of these over 208,000 tons were imported during the first half of the year to which the United Kingdom contributed 81,000 tons or 39 per cent and the Continental countries 69 per cent. In the second half of the year the imports were very much reduced and amounted to 135,000 tons but the share of the United Kingdom improved to 31 per cent while there was a corresponding decline in the share of the Continental countries.

Other metals (Rs. 3.44 lakhs).—Imports of metals, other than iron and steel, declined from 55,000 tons valued at Rs. 5.08 lakhs in 1930-31 to 47,000 tons valued at Rs. 3.44 lakhs in 1931-32.

there being a decrease under each description of non ferrous metals with the exception of quicksilver a comparatively unimportant item in this group

Machinery and millwork (Rs 11.57 lakhs)—Imports of machinery and millwork which are recorded in value only declined by 24 per cent from Rs 15.14 lakhs in 1930-31 to Rs 11.57 lakhs in 1931-32. Allowing for the change in prices, the decline was not so great as the figures seem to suggest. There are however some branches of the trade—mostly cotton and sugar machinery—which showed a distinct advance, thereby indicating an expansion of activity in these selected industries.

There was a noticeable decrease under prime movers the imports of which fell from Rs 2.74 lakhs in 1930-31 to Rs 1.56 lakhs in 1931-32. The loss under this head was chiefly due to smaller importations of railway locomotive engines and oil engines of the industrial type which were valued at Rs 08 lakhs and Rs 32 lakhs as compared with Rs 1.80 lakhs and Rs 60 lakhs respectively in 1930-31. Despite an increase in the demand for generating plants and other electrical equipments required largely in connection with the hydro-electric schemes of the Punjab which were in progress imports of electrical machinery needed from Rs 2.99 lakhs to Rs 2.16 lakhs. Imports of textile machinery declined in value from Rs 2.88 lakhs to Rs 2.44 lakhs. As a result of the world economic condition and of the ban on the extension of jute mills imposed by the Calcutta Jute Mills Association, there was a lack of demand for jute machinery imports of which fell steadily from Rs 1.44 lakhs in 1929-30 to Rs 81 lakhs in 1930-31 and further to Rs 32 lakhs in 1931-32. Cotton machinery however showed an improvement. Prices were low for the greater part of the year and some Indian cotton mills particularly in Bombay took this opportunity to carry out schemes which had been in abeyance for several years. Imports of cotton machinery rose from Rs 1.78 lakhs to Rs 1.93 lakhs.

There was a marked improvement in the imports of sugar machinery which were valued at Rs 30 lakhs in 1931-32 as compared with Rs 14 lakhs in the preceding year. The Indian sugar industry was the subject of an enquiry by the Indian Tariff Board and the expectation that a change in Government policy was imminent led to an enormous importation of sugar machinery for factories in India. Imports of other classes of machinery showed noticeable decreases.

Motor vehicles (Rs 2.39 lakhs)—As a consequence of the general business depression

the demand for motor cars weakened greatly and the imports during 1931-32 were with the exception of 1921-22 and 1922-23, the lowest recorded in any year during the post-war period. The total imports of motor cars in 1931-32 numbered 7,220 valued at Rs 1.48 lakhs as compared with 12,001 valued at Rs 2.58 lakhs in 1930-31. The year falls into two distinct periods—one before and the other after the suspension of the gold standard. The first period which practically covers the first half of the year was one of shrinking trade and increasing competition resulting in a steady decline in the participation of the United Kingdom in the trade to an unprecedentedly low level. The second half though in no way better in respect of the total output was clearly defined by a marked improvement of the British proportion to the total importation, which was brought about by the suspension of the gold standard and the linking of the rupee to the pound sterling. Of the total imports numbering 4,245 in the first half of the year, only 17 per cent or 717 cars came from the United Kingdom and 71 per cent or 3,019 from the United States of America and Canada, while in the second half out of a total of 2,975 cars the United Kingdom supplied 1,461 or 49 per cent and the United States of America and Canada together 1,025 or 34 per cent. Taking the year as a whole the proportion of British cars to the total trade advanced from 24 per cent in 1930-31 to 30 per cent in 1931-32. Although the number of such cars imported fell from 2,695 valued at Rs 71 lakhs to 2,178 valued at Rs 50 lakhs. The number of cars imported from the United States of America declined from 4,098 valued at Rs 1,00 lakhs to 3,364 valued at Rs 61 lakhs and of those from Canada shrank from 3,820 valued at Rs 54 lakhs to 678 valued at Rs 10 lakhs. The combined imports from these two countries represented 56 per cent of the total number of cars imported in 1931-32 as compared with 66 per cent in 1930-31 and 69 per cent in 1929-30.

The imports of motor omnibuses, vans, lorries etc. in 1931-32 numbered 4,302 valued at Rs 67 lakhs as compared with 8,913 valued at Rs 1.42 lakhs in the preceding year. Of these 62 per cent or 2,685 represented chassis with a total value of Rs 47 lakhs as against 67 per cent or 5,930 valued at Rs 1,04 lakhs in 1930-31.

The following table shows the number of all classes of motor vehicles registered in the different provinces of British India up to the end of March 1932.

Number of motor vehicles registered in British India up to 31st March 1932

Provinces	Motor cars, including taxicabs	Motor cycles including Scooters and Auto wheels		Heavy motor vehicles (lorries, buses etc.)	Total
	Number	Number	Number		Number
Bengal including Calcutta	35,061	5,080	4,615		44,756
Bombay City (a)	4,022	5,529	1,010		10,561
Bombay Presidency (excluding Bombay City and Sind) (a)	10,249	774	52		11,075
Madras City	12,972	3,113	2,011		18,096
Madras Presidency (excluding Madras City)	7,608	1,708	6,412		15,728

Number of Motor Vehicles registered in British India up to 31st March 1932—contd

Provinces	Motor Cars including Taxi cabs	Motor cycles including Scooters and Auto-wheels	Heavy motor vehicles (trucks, buses, etc.)	Total
	Number	Number	Number	Number
United Provinces	12 076	2 068	5 707	19,851
Punjab	12 307	4 848	8 056	24 709
Burma (a)	12 117	1 377	7 505	21 059
Rihar and Orissa	10 657	1 434	2 596	14 687
Central Provinces	4 550	799	1,804	6 155
Sindh	1 952	480	541	2 953
Delhi	6 260	1 158	1 504	8 922
North West Frontier Province	3 779	1 434	2 425	7 238
Ajmer Merwar	435	167	270	1 018
Assam (b)	1 980	206	2 478	4 064
Total	139 226	24 612	46 888	210 726

(a) Represent numbers of motor vehicles actually running up to 31st March 1932

(b) Relate to the year ended 31st December 1931

Hardware (Rs. 2.61 lakhs).—The value of the total imports of hardware amounted to Rs. 2.61 lakhs in 1931-32 as compared with Rs. 3.60 lakhs in the preceding year and was much below the pre-war figure of Rs. 3.17 lakhs. Despite low prices, the demand slackened and this lack of demand was due to lack of purchasing power on the part of the consumers who resorted to hand to mouth buying.

Mineral Oils (Rs. 9.04 lakhs).—Imports of all kinds of mineral oils into India declined from 242½ million gallons valued at Rs. 10.48 lakhs in 1930-31 to 216½ million gallons valued at Rs. 9.04 lakhs in 1931-32. This represented a fall of 11 per cent in quantity and of 14 per cent in value. With the exception of petrol, all the other important descriptions of mineral oils registered decrease. Of the total quantity of mineral oils imported in 1931-32 kerosene oil represented 40 per cent fuel oils 47 per cent and lubricating oils 7 per cent as compared with 41.44 and 11 per cent respectively in 1930-31.

Imports of sugar of all sorts excluding molasses decreased from 901,000 tons in 1930-31 to 516,000 tons in 1931-32 thus showing a decline of 385,000 tons or 43 per cent. The decline in value was from Rs. 10.54 lakhs to Rs. 6.01 lakhs or 43 per cent. Imports of sugar 23 1/4 % and above decreased from 728,000 tons to 365,000 tons. The main fall was in the imports from Java which amounted to 836,000 tons as compared with 715,000 tons in the preceding year. Imports from the United Kingdom went up slightly from 1,230 tons to 3,600 tons. Imports from Ceylon decreased from nearly 6,000 tons to a little under 1,000 tons. Imports from China including Hong Kong decreased from nearly 5,000 tons to a little under 4,000 tons.

The total amount of beet sugar imported during the year was 118,000 tons as compared with 78,000 tons in the preceding year. Imports from most of the countries showed increase. Russia sent 68,000 tons in the year under review as compared with 43,000 tons in the preceding year. The share of the United Kingdom increased from 7,000 tons to 19,000 tons and that of Germany from 11,000 tons to 15,000 tons.

On the other hand the share of Hungary went down from 14,000 tons to less than a thousand tons. The bulk of the imports of beet sugar during the year was received in Hind and Bombay.

Provisions (Rs. 3.41 lakhs).—Under this comprehensive head which covers a large variety of articles such as canned and bottled provisions, farinaceous and patent foods, condensed milk, biscuits and cakes, confectionery, bacon and ham, cheese, jams and jellies, pickles and sauces, butter, corns and chocolate, langas, gird, lard and vinegar the total value of the imports recorded showed a further decline from Rs. 4.88 lakhs in 1930-31 to Rs. 3.41 lakhs during the year under review.

Chemicals (Rs. 2.57 lakhs).—The total imports of chemicals (excluding chemical manures and medicines) in 1932-33 were valued at Rs. 2.57 lakhs a decline of Rs. 4 lakhs in comparison with 1930-31. Sodium compounds accounting for 47 per cent of the total imports of chemicals as against 45 per cent in 1930-31 amounted to 1,515,000 cwts valued at Rs. 1.31 lakhs as compared with 1,507,000 cwts valued at Rs. 1.17 lakhs in the preceding year. Imports of sodium carbonate amounted to 1,018,000 cwts (Rs. 82 lakhs) as compared with 1,042,000 cwts (Rs. 54½ lakhs) the United Kingdom as usual remaining the chief source of supply. The total consumption of caustic soda drawn chiefly as in previous years from the United Kingdom, Germany and the United States of America rose from 231,900 cwts valued at Rs. 27 lakhs to 251,400 cwts valued at Rs. 32 lakhs. Imports of acids declined from 85,000 cwts to 80,000 cwts in quantity and from Rs. 10 lakhs to Rs. 8 lakhs in value. The bulk of this decline is accounted for by a reduction under sulphuric acid from 13,500 cwts to 5,500 cwts.

Drugs and Medicines (Rs. 1.81 lakhs).—The total value of drugs and medicines imported recorded a fall of 2 per cent from Rs. 1.94 lakhs in 1930-31 to Rs. 1.91 lakhs in 1931-32.

Paper and Pasteboard (Rs. 2.46 lakhs).—The total imports of paper and pasteboard declined from 2,294,000 cwts valued at Rs. 2.87 lakhs to 2,197,000 cwts valued at Rs. 2.50 lakhs, of which 1,815,900 cwts (Rs. 2.24 lakhs) represented paper of all kinds as against 1,984,000 cwts (Rs. 2.60 lakhs) in the preceding year.

Imports of printing paper amounted to 618 000 cwt. valued at Rs. 80 lakhs as compared with 688 000 cwt. valued at Rs. 96 lakhs in 1930-31. Newsprint paper declined from 411 000 cwt. to 389 000 cwt. in quantity and from Rs. 52½ lakhs to Rs. 44½ lakhs in value. Other kinds of printing paper also recorded a decrease from 252 000 cwt. valued at Rs. 46 lakhs to 217 000 cwt. valued at Rs. 3½ lakhs.

Liquors (Rs. 2.7 lakhs).—There was a further decline in the imports of liquor the total quantity imported having fallen by 21 per cent. from 7.3 million gallons in 1930-31 to 5.7 million gallons in 1931-32, and the value by 32 per cent. from Rs. 4.32 lakhs to Rs. 2.7 lakhs. Of the total quantity of liquors imported, ale, beer and porter accounted for 98 per cent. spirit 21 per cent. and wines only 3 per cent. Imports of ale, beer and porter fell from 4 610 000 gallons to 3 725 000 gallons.

Salt (Rs. 72 lakhs).—The imports of foreign salt by sea into British India declined by 36 per cent. in quantity from 704 000 tons in 1930-31 to 451 000 tons in 1931-32 and by 37 per cent. in value from Rs. 1.1 lakhs to Rs. 72 lakhs. With the exception of Aden the most important source of supply all the other countries sent much less than in the preceding year. Of the total quantity imported in 1931-32 nearly 314 000 tons or 70 per cent. came from Aden as compared with 188 000 tons or 27 per cent. of the total in the preceding year. The increase in Aden's share was due to the additional duty of 4 as 6p per maund imposed on non-Indian salts by the Salt (Additional Import Duty) Act of 1931. Germany reduced her supplies from 97 000 tons to 26 000 tons, Spain from 67 000 tons to 4 000 tons and the United Kingdom from 42 000 tons to 20 000 tons. There were also smaller receipts from Italian East Africa and Egypt which amounted to 67 000 tons and 15 000 tons respectively as against 134 000 tons and 130 000 tons in 1930-31.

Dyeing and Tanning Substances (Rs. 2.68 lakhs).—Imports of dyeing and tanning substances continued to advance the total value amounting in 1931-32 to Rs. 2.68 lakhs an increase of Rs. 9 lakhs in comparison with 1930-31 and of Rs. 24 lakhs in comparison with 1929-30. (Natal dyer representing the bulk of the imports under this head showed an increase from 17.6 million lbs. valued at Rs. 2.23 lakhs to 17.9 million lbs. valued at Rs. 2.33 lakhs).

Spices (Rs. 2.68 lakhs).—There was a further decline in the total imports of spices which in 1931-32 amounted to 1 270 000 cwt. valued at Rs. 2.08 lakhs as against 1 947 000 cwt. valued at Rs. 2.55 lakhs in 1930-31. The bulk of the year's decline is to be attributed to a falling off in the imports of betelnuts from

1 190 000 cwt. (Rs. 1.89 lakhs) in 1930-31 to 1 101 000 cwt. (Rs. 1.45 lakhs).

Glass and Glassware (Rs. 1.22 lakhs).—The total value of the imports of glass and glassware amounted to Rs. 1.22 lakhs as compared with Rs. 1.65 lakhs in 1930-31 and Rs. 2.52 lakhs in 1929-30. All the descriptions under this head without exception recorded decreases. Of the principal countries participating in this trade Czechoslovakia showed the greatest percentage decline with her supplies falling in value from Rs. 36 lakhs to Rs. 3 lakhs which was even less than one third of what she had realised in 1929-30. Japan retained the foremost position in the trade but the value of her supplies fell from Rs. 5.5 lakhs to Rs. 4.3 lakhs.

Tobacco (Rs. 84 lakhs).—Imports of unmanufactured tobacco almost wholly meant for consumption in the local factories amounted to 2.8 million lbs. as compared with 1.6 million lbs. in 1930-31 but they were still 1.8 million lbs. less than the quantity received in 1929-30. Foreign smokers continued to lose in public favour and imports declined from 3.1 million lbs. valued at Rs. 1.32½ lakhs to 1.4 million lbs. valued at a little below Rs. 53 lakhs.

Precious Stones and Pearls (Rs. 45 lakhs).—The value of precious stones and pearls imported declined from Rs. 1.10 lakhs in 1929-30 to Rs. 60 lakhs in 1930-31 and further to Rs. 45 lakhs in 1931-32. Of these diamonds accounted for Rs. 32 lakhs and pearls most for Rs. 10½ lakhs as compared with Rs. 46 and Rs. 11 lakhs respectively in 1930-31. The imports of other precious stones are comparatively small being valued at Rs. 2 lakhs in 1931-32 as against Rs. 3 lakhs in the three preceding years.

Cement (Rs. 41 lakhs). Imports of cement showed a further decline from 112 000 tons to 88 000 tons in quantity and from Rs. 5½ lakhs to Rs. 41 lakhs in value. The bulk of the consignments during the year came as usual from the United Kingdom, supplies from which source amounted to 40 000 tons (Rs. 20½ lakhs) as against 64 000 tons (Rs. 36 lakhs) in 1930-31. There was also a falling off in the contribution of Japan which had steadily been on the increase in recent years from 37 000 tons valued at Rs. 18 lakhs to 29 000 tons valued at Rs. 9½ lakhs. Among other countries Germany and Belgium showed noticeable decreases.

Coal (Rs. 11 lakhs). Imports of foreign coal declined by 64 per cent. in quantity from 1.6 million tons in 1930-31 to 56 000 tons in 1931-32 and by 61 per cent. in value from Rs. 28 lakhs to Rs. 11½ lakhs. The imports from Natal were considerably reduced with the result that the United Kingdom had the largest share in the total importations of the year.

The following table shows the sources of imports of foreign coal during the past five years —

	1927-28	1928-29	1929-30	1930-31	1931-32
	Tons	Tons	Tons	Tons	Tons
United Kingdom	52 000	39 000	19 000	23 000	24 000
Natal	155 000	105 000	197 000	121 000	23 000
Japan	6 000	1 000	1 000	1 000	1 000
Portuguese East Africa	36 000	21 000		5 000	
Australia	9 000	1 000	2 000	1 000	4 000

Matches (Rs. 4 lakhs).—The Indian match industry sheltered by high tariff, is now able to meet India's domestic requirements and imports of foreign matches are insignificant. Only 105,000 gross of match boxes were imported in 1931-32 as compared with 397,000 gross in 1930-31 and 13½ million gross valued at Rs. 2.04 lakhs in 1921-22 when the local industry was not developed and when lower duties prevailed.

III.—EXPORTS OF MERCHANDISE

The following table shows the comparative importance of the principal articles exported from British India.—

EXPORTS

(In thousands of Rupees)

	1927-28	1928-29	1929-30	1930-31	1931-32	Percentage on total exports of merchandise in 1931-32

Cotton (Rs 23.45 lakhs)—In Indian cotton crop of the season 1931-32 was estimated at 4,064,000 bales of 400 lbs each as compared with 5,284,000 bales in the preceding year. The American crop of 1931 was estimated at 17,086,000 bales of 500 lbs gross weight (equivalent to 21,370,000 bales of 400 lbs each) as compared with 1,932,000 bales of 500 lbs for 1930. The output of Egyptian cotton for 1931-32 was 1,536,000 bales of 400 lbs each as compared with 2,001,000 bales in 1930-31.

The increased demand from the Indian mill industry for home cotton coupled with an extraordinarily short crop left a smaller quantity of raw cotton available for export to foreign countries in the year under review as compared with the preceding year. The increase in parity as has been explained above also discouraged exports to some extent as foreign consumers tried as far as possible, to substitute American Cotton for Indian cotton. Thus according to the trade returns of Japan, import of American cotton into Japan increased from 200,000 tons in 1930-31 to 455,000 tons in 1931-32, whereas the total imports of Indian cotton declined from 246,000 tons to 208,000 tons in the same period. The Continental countries also took

less of Indian cotton for similar reasons. Exports of Indian cotton in 1931-32 amounted to 2,369,000 bales as compared with 3,926,000 bales in 1930-31. This is the lowest figure of export in the post-war period except for 1920-21. The value of the exports amounted to Rs 23.45 lakhs as compared with Rs 46.13 lakhs in the preceding year. Japan as usual was India's biggest customer but her share amounted to only 1,080,000 bales valued at Rs 11 crores as compared with 1,686,000 bales valued at Rs 21 crores in the preceding year. China the next biggest customer took 457,400 bales valued at Rs 4.52 lakhs as compared with 605,500 bales valued at Rs 7.41 lakhs. The United Kingdom took 184,400 bales valued at Rs 3.44 lakhs as compared with 280,800 bales valued at Rs 3.00 lakhs in the preceding year. Exports to Italy dwindled from 301,900 bales valued at Rs 3.77 lakhs in 1930-31 to 183,500 bales valued at Rs 1.62 lakhs in 1931-32. Exports to Belgium, France and Spain declined from 217,500, 231,00 and 106,100 bales to 120,800, 80,600 and 4,200 bales respectively. The following statement gives the monthly exports of Indian cotton during the last five years together with the pre-war average—

Exports of Indian cotton in bales of 400 lbs

(In thousands of Rupees)

	Pre war average 1909-14	1927-28	1928-29	1929-30	1930-31	1931-32
April	903 800	226 100	3-1 000	386 300	424 700	307 300
May	246 800	200 600	37-1 800	404 900	341 700	283 400
June	218 900	240 300	304 900	282 200	244 500	260 600
July	190 100	180 400	286 200	318 700	258 900	312 900

March	296 800	384 800	559 500	608 300	438 900	168 200
TOTAL	2 407 300	2 686 200	3 711 700	1 470 400	3 926 000	2 369 200

Cotton Manufactures (Rs 4.52 lakhs)—The value of yarn exported declined from Rs 1.58 lakhs in 1930-31 to Rs 1.28 lakhs, a decline of Rs 30 lakhs. Exports to Iraq, Syria and Persia showed increases whereas to Greece, European Turkey, Aden and Japan declined. Spain, China and Egypt showed declines.

The exports of Indian piecegoods slightly increased from 98 million yards to 105 million yards though the value showed a decline of Rs 8 lakhs to Rs 3.24 lakhs. The largest single customer for Indian piecegoods was Persia which took 20 million yards valued at Rs 48 lakhs as compared with 13 million yards

valued at Rs 34 lakhs in the previous year. The revival of the trade with Persia is a welcome feature of the year under review. The share of Britain though smaller in quantity than Persia's, was higher in value, her takings amounting to 17.1 million yards valued at Rs 70 lakhs as compared with 17.6 million yards valued at Rs 73 lakhs in the previous year. Exports to Iraq also showed an increase, as in the case of Persia and amounted to nearly 13 million yards valued at Rs 37 lakhs in the year under review as compared with 9 million yards valued at Rs 29 lakhs in the preceding year. Exports to the Straits Settlements declined further to 9 million yards valued at Rs 48 lakhs as compared with 11 million yards valued at Rs 62 lakhs

On the other hand the takings of Arabia the Bahrain Islands and Fungayika Territory showed increases from 4 8 2 4 and 10 1 million yards to 6 2 4 5 and 10 7 million yards respectively. The share of the other countries showed declines.

Detailed figures of exports for the past three years compared with 1913 14 are given below—

	1913 14 (pre-war year)	1929-30	1930-31	1931 32
Grey and bleached piece-goods—	Million yards	Million yards	Million yards	Million yards
Shirtings	2 2	2 5	3 9	4 1
Chaddars and durties	7 6	4 0	2 1	2 3
T cloth and domestics	21 6	2 0	1 3	6
Drills and jeans	6	3	1	1
Other sorts	12 2	7 4	2 8	1 7
TOTAL	44 2	16 2	10 2	8 8
Coloured piece-goods	45 0	117 2	87 5	95 8
TOTAL PIECE-GOODS	89 2	133 4	97 7	104 6

Jute and Jute manufactures (Rs 33.11 lakhs)—The total area under jute in 1931 was 1 582 000 acres as compared with 3 493 000 acres in 1920. The yield of the 1931 crop was estimated to be 5 6 million bales as against 11 8 million bales estimated for the preceding year. The total weight of raw and manufactured jute exported during the year amounted to 1 250 000 tons or 138 000 tons less than in the preceding year. The total value declined from nearly Rs 45 crores in 1930 31 to a little over Rs 33 crores in 1931 32, a drop of over Rs 11 crores. Raw jute accounted for 34 per cent of the value and jute manufactures 66 per cent as compared with 29 and 71 per cent respectively in the preceding year. The following statement compares the quantities exported during 1913 14 and each of the past three years—

	1913 14	1929-30	1930 31	1931 32
Jute (in thou sand tons)	784	907	620	557
Bags (in million)	360	523	434	389
Cloth (in million yards)	1 061	1 051	1 271	1 021

The quantity of raw jute exported was 1 per cent less than in the preceding year and 24 per cent less than in the pre-war year 1913 14. Exports of gunny bags declined in number from 434 millions to 389 millions and of gunny cloth from 1 271 million yards to 1 021 million yards.

The total exports of raw jute declined from 3 470 000 bales valued at a little under Rs 13 crores to 3 285 000 bales valued at a little over Rs 11 crores. Germany had yielded her position as the largest customer to the United Kingdom. Exports to Germany amounted to 733 000 bales valued at Rs 2 44 lakhs as compared with 946 000 bales valued at Rs 3 89 lakhs in the preceding year. The share of the United Kingdom

had gone up considerably from 604 000 bales valued at Rs 2 23 lakhs in 1930 31 to 862 000 bales valued at Rs 3 11 lakhs in 1931 32. Exports to France amounted to 261 000 bales valued at Rs 60 lakhs as compared with 408 000 bales valued at Rs 1 85 lakhs in the preceding year. The takings of the United States of America amounted to 274 000 bales valued at Rs 91 lakhs in the year under review as compared with 297 000 bales valued at Rs 1 04 lakhs in 1930 31. The share of Belgium also declined to 257 000 bales valued at Rs 84 lakhs in 1931 32 as compared with 268 000 bales valued at Rs 99 lakhs in 1930 31. On the other hand the shares of Spain Italy China Japan the Argentine Republic and Brazil showed slight increases. Exports to other countries generally showed declines.

Foodgrains and Flour (Rs 20.37 lakhs)—Exports under this head equalled exactly in quantity those of last year though owing to lower prices there was a considerable decrease in the total value. The total quantity of food grains and flour exported amounted to 2 614 000 tons in both the years. The value however declined from Rs 29 88 lakhs in 1930 31 to Rs 20 37 lakhs in 1931 32. Exports of rice increased from 2 279 000 tons to 2 372 000 tons. On the other hand consignments of wheat declined from 197 000 tons to 20 000 tons. Shipments of wheat flour also declined from 47 000 tons to 43 000 tons. Shipments of pulses showed an increase of 11 000 tons to 98 000 tons. Exports of barley and jowar and bajra amounted to 27 000 and 50 000 tons as compared with 1 000 and 7 000 tons respectively in the preceding year.

There were practically no exports of maize.

Tea (Rs 19.44 lakhs)—The total production of tea in India in 1931 was estimated at 394 million lbs as compared with 391 million lbs in 1930 48 million lbs in 1929 and 494 million lbs in 1928. As usual Assam contributed the largest share namely 243 million lbs or 62 per cent of the total output and Southern India 57 million lbs or 14 per cent. Production

in Assam increased by 10 million lbs whereas production in the rest of Northern India decreased by about 9 million lbs. The total area under tea in 1931 was 807 100 acres as against 802 900 acres in 1930. The total shipments of tea during the year showed a decrease of 4 per cent in quantity and 17 per cent in value. Only 608 000 lbs of green tea were exported during the year, the balance of 341 million lbs consisted of black tea. Exports to the United Kingdom totalled 291 million lbs valued at Rs 17 crores as compared with 298 million lbs valued at Rs 20 crores in the preceding year. The share of the United Kingdom was 85 per cent of India's total exports as compared with 84 per cent in the preceding year. Re-exports of Indian tea from the United Kingdom were 50 million lbs in 1931-32 as in the preceding year. Stocks in London amounted to 139 million lbs at the end of the year as compared with 157 million lbs in the preceding year. Re-exports of Indian tea from the United Kingdom to the Irish Free State amounted to 17.8 million lbs in 1931-32 as compared with 18.0 million lbs in 1930-31. Re-exports to Russia amounted to 3.8 million lbs in the year under review as compared with 4.9 million lbs in the preceding year. Direct shipments to Russia showed a

considerable decline from 6.3 million lbs in 1930-31 to 1.5 million lbs in 1931-32. Thus the total exports of Indian tea to Russia decreased from 11.1 million lbs in 1930-31 to 7.3 million lbs in 1931-32. From the London market other European countries took Indian tea to the extent of 10.8 million lbs as compared with 10.3 million lbs in 1930-31. Re-exports from the United Kingdom to the United States of America increased from 7.2 million lbs in 1930-31 to 7.9 million lbs in 1931-32. Direct shipments to the United States of America were almost the same as in the preceding year being 10.0 million lbs as against 9.9 million lbs. Thus the total exports to the United States of America increased from 17.1 million lbs to 17.9 million lbs. Re-exports from the United Kingdom to Canada and Newfoundland increased from 6.4 million lbs in 1930-31 to 6.9 million lbs in 1931-32. Direct shipments to Canada also showed an increase from 10.2 million lbs to 14.1 million lbs. Exports to China receded from 1.7 million lbs to 1.2 million lbs. Exports to Australia showed a considerable fall from 4.5 million lbs to 2.5 million lbs and to Egypt from 3.6 million lbs to 1.3 million lbs. Exports to Persia declined by more than 50 per cent from 4.3 million lbs to 2 million lbs.

Exports of tea by sea to foreign countries

	1906-07	1911-12	1926-27	1927-28	1928-29	1929-30	1930-31	1931-32
	lbs	lbs	lbs	lbs	lbs	lbs	lbs	lbs
	(1 000)	(1 000)	(1 000)	(1 000)	(1 000)	(1 000)	(1 000)	(1 000)
From Northern India (Calcutta and Chittagong)	217 931	301 403	304 937	315 109	309 845	328 363	307 147	290 204
From Southern India (Madras Ports)	13 940	25 840	42 940	45 744	49 321	49 671	48 546	45 901
From Bombay, Sind and Burma	1,743	11 227	1 472	781	476	800	117	923
TOTAL	233 654	338 470	349 264	361 614	359 602	378 634	355 230	341 518

Oilseeds (Rs. 14.59 lakhs).—The total exports of Indian oilseeds declined from 1 037 000 tons valued at Rs 17.86 lakhs in 1930-31 to 988 000 tons valued at Rs 14.59 lakhs in 1931-32 and showed a decrease of 4 per cent in quantity and of 18 per cent in value. World supplies were abundant and generally in excess of requirements. The Indian trade had therefore to withstand competition of excessive production of oil producing materials in other countries. It will be seen from the table on the margin that while exports of linseed and cotton seed were much smaller than in the preceding year there were increases under groundnuts, rapeseed, sesamum and castor seed.

The following are the quantities of oilseed exported in recent years—

	Pre-war average	1926-27	1928-29	1929-30	1930-31	1931-32
	(Thousands of tons)					
Linseed	379	249	257			120
Rapeseed	273	44	34			54
Groundnuts	212	714	601			672
Castor	714	106	91			104
Cotton	240	68	41			12
Sesamum	110	11	1			12
Copra	31					
Others	85	14	18			14
TOTAL	1 408	1 195	1 037			988

Hides and Skins (Rs. 8.92 lakhs).—The trade under this head was even smaller than in the preceding year, the total value falling from Rs. 11.74 lakhs to Rs. 8.92 lakhs or a decline of 24 per cent. The reasons for this decline are the same as in the preceding year, namely the trade depression which led to a reduction in the demand especially in the demand for raw hides and skins. The average declared value for raw hides and skins declined from Rs. 0-8-8 to Rs. 0-7-9 per lb. whereas in the case of tanned hides and skins the decline was from Rs. 1-9-3 to Rs. 1-7-10 per lb. Shipments of raw hides and skins during the year amounted to 33,600 tons valued at Rs. 3.06 lakhs as compared with 41,300 tons valued at Rs. 5.47 lakhs in the preceding year. Exports of raw hides declined from 22,900 tons valued at Rs. 1.78 lakhs in 1930-31 to 16,600 tons valued at Rs. 91 lakhs in 1931-32 and this represented 49 per cent in quantity of the total exports of raw hides and skins as against 60 per cent in the preceding year. Exports of raw skins declined both in number and weight as compared with the preceding year and amounted to 49 per cent of the total tonnage of raw hides and skins exported as compared with 49 per cent in 1930-31. Exports of raw skins amounted to 16,500 tons valued at Rs. 2.74 lakhs in the year under review as compared with 18,800 tons valued at Rs. 3.63 lakhs in the preceding year. Exports of tanned or dressed hides and skins decreased from 17,700 tons valued at Rs. 6.27 lakhs in 1930-31 to 16,800 tons valued at Rs. 5.26 lakhs in 1931-32. Exports of tanned hides declined from 11,500 tons valued at Rs. 2.60 lakhs in 1930-31 to 10,900 tons valued at Rs. 2.13 lakhs in 1931-32. There was also a decline in tanned skins from 6,200 tons to 6,600 tons, the decline in value being from Rs. 3.66 lakhs to Rs. 3.14 lakhs.

Lac (Rs. 1.84 lakhs).—A shrinkage in the demand from the consuming markets arising out of curtailed manufacturing operations and competition from synthetic materials was a feature of the lac trade. The total exports of lac declined by 15 per cent in quantity from 547,400 cwts. in 1930-31 to 464,000 cwts. in 1931-32 and by 41 per cent in value from Rs. 3.14 lakhs to Rs. 1.84 lakhs, the decrease being noticeable principally in the case of manufactured lac (i.e. shellac and button lac) which formed the bulk of the exports.

Raw Wool (Rs. 2.77 lakhs).—The trade in raw wool showed an improvement, the exports rising from 30 million lbs. to 41 million lbs. in quantity and from Rs. 2.61 lakhs to Rs. 2.77 lakhs in value. Of the total quantity shipped the United Kingdom took 35 million lbs. or 85 per cent as compared with 27 million lbs. or 90 per cent in the preceding year while the remainder went mainly to the United States of America. Besides Indian wool a fairly large quantity of foreign wool of Tibetan and Central Asian origin imported across the frontier, is re-exported from India.

Oils (Rs. 57 lakhs).—The total exports of oils were valued at Rs. 57 lakhs in 1931-32 as compared with Rs. 47 lakhs in 1930-31. As usual the trade was practically confined to essential and non-essential vegetable oils, animal and mineral oils forming a very small

proportion of the total trade. Shipments of vegetable oils advanced from 1,140,000 gallons valued at Rs. 24 lakhs to 1,900,000 gallons valued at Rs. 30 lakhs in 1931-32. Exports of castor oil more than doubled in quantity.

Metals and Ores (Rs. 5.47 lakhs).—The total exports of ores consisting largely of manganese ore fell from 624,000 tons valued at Rs. 2.43 lakhs in 1930-31 to 236,000 tons valued at Rs. 1.47 lakhs in 1931-32. The reduction in the output of world metallurgical industries seriously affected the demand for manganese. Exports from India were the lowest since 1905-06 and amounted to 215,000 tons compared with 484,000 tons in 1930-31 and the record shipments of 816,000 tons in 1929-30. To every market without exception there was a substantial decline in exports. France usually the largest purchaser reduced her takings from 184,000 tons to 20,000 tons and was followed by the United Kingdom which took only 54,000 tons as against 114,000 tons in 1930-31. Exports to Belgium similarly fell from 78,000 tons to 35,000 tons and those to the United States of America from 49,000 tons to 28,000 tons. There were also smaller shipments to Germany and the Netherlands amounting to 1,900 tons and 2,500 tons as compared with 15,300 tons and 11,500 tons respectively in 1930-31. The export trade in manganese ore was practically confined to Bengal and Bombay the former accounting for 70 per cent and the latter for 30 per cent as compared with 49 and 50 per cent respectively in the preceding year. Shipments of ferruginous manganese ore mostly to Belgium and France, declined from 5,000 tons to 3,000 tons. There were no exports of ferro-manganese during 1930-31 and 1931-32. Exports of pig iron further declined by 28 per cent in quantity from 439,000 tons in 1930-31 to 351,000 tons in 1931-32 and by 28 per cent in value from Rs. 1.70 lakhs to Rs. 1.23 lakhs. Both the United Kingdom and the United States of America considerably reduced their purchases from 98,000 tons and 108,000 tons to 69,000 tons and 51,000 tons respectively while Japan raised her requirements from 161,000 tons to 188,000 tons. Among other countries Germany took 19,000 tons or 2,000 tons more than in the preceding year while China and Hongkong together required 15,000 tons or 5,000 tons less than in 1930-31. The following table shows the production of pig iron and steel in India during the past three years—

	In thousand tons		
	1929-30	1930-31	1931-32
Production of pig iron	1,876	1,140	1,070
(Ingots) " steel	581	625	602
Production of finished steel	412	434	450

Other Exports.—Other important exports from India including paraffin wax (Rs. 222 lakhs), oilseeds (Rs. 201 lakhs), Coffee (Rs. 943 lakhs), raw rubber (Rs. 45 lakhs), spices (Rs. 24 lakhs), measures (Rs. 38 lakhs), iron (Rs. 87 lakhs), teakwood (Rs. 67 lakhs), dyestuffs and tanning substances (Rs. 87 lakhs), unmanufactured tobacco (Rs. 61 lakhs).

Index Numbers of Prices.

The Director General of Commercial Intelligence Calcutta publishes every year an addendum to the publication Index Numbers of Indian Prices 1861-1926 which brings up-to-date (1) the unweighted index numbers of 28

exported articles (2) the unweighted index numbers of 11 imported articles (3) the general unweighted index number for 39 articles and (4) the weighted index numbers of 100 articles on base 1873-100

The following table contains these index numbers since the year 1925 —

Year	Exported articles 28 (unweighted)	Imported articles 11 (unweighted)	General Index No for all (39) Articles (unweighted)	Weighted Index No (100) Articles equated to 100 for 1873.
1925	229	211	227	265
1926	235	191	216	260
1927	269	185	202	258
1928	212	171	201	261
1929	216	170	203	254
1930	177	167	171	213
1931	125	140	124	

Besides the above wholesale price index numbers the Director General of Commercial Intelligence Calcutta compiles a wholesale price index number for Calcutta while the Bombay Labour Office compiles similar statistics for Bombay and Karachi.

The following table gives these index numbers since 1925

Wholesale price index numbers for Calcutta, Bombay and Karachi

Year	Calcutta	Bombay	Karachi
1925	159	163	161
1926	148	149	140
1927	148	147	137
1928	145	146	137
1929	141	145	133
1930	116	128	108
1931	98	109	95
1932	91	109	99

About the end of the year 1929 there began a sharp decline in wholesale prices which continued during the year 1930 and 1931. During 1932 although wholesale prices were slightly lower than in 1931, the fluctuations were within narrow limits.

The various Provincial Governments publish in their respective Gazettes fortnightly and monthly statements of retail and wholesale prices of certain important commodities. In addition to these however some of the Provincial Governments also publish working class cost of living index numbers. Such index numbers are being published regularly every month for the following centres, viz. Bombay, Ahmedabad and Sholapur by the Labour Office of the Government of Bombay, for Nagpur and Jabalpur by the Department of Industries Central Provinces and Berar for seven centres in Bihar and Orissa by the Department of Industries Bihar and Orissa, and for Rangoon by the Office of the Director of Statistics and Labour Commissioner, Burma. Rangoon

The Bombay working class cost of living index number with base July 1914-100 stood at 110 in December 1932, the average for the year being 109. The Ahmedabad cost of living index number with base August 1926 to July 1927-100 stood at 76 in December 1932 while

the Sholapur cost of living index number with base February 1927 to January 1928-100 stood at 71 in December 1932. The Nagpur cost of living index number on base January 1927-100 was 60 in December 1932 while the Jabalpur index on the same base was 57. For Rangoon four different index numbers with base 1913-100 are compiled for (a) Burmese (b) Tamils Telugus and Orissas (c) Hindustanis and (d) Chittagonians. The index number in December 1932 for these were 92, 92, 93 and 89 respectively.

The catastrophic fall in prices which commenced at the end of 1929 continued also during 1931 although with less vigour than in 1930. In 1932 prices ruled at a slightly lower level than in 1931.

The inadequacy as also the general unreliability of Indian price statistics has been the subject of comment by many committees and commissions of enquiry and the majority of the Indian Economic Enquiry Committee of 1925 made many suggestions for the improvement of price statistics and advocated the passing of a Census and Statistics Act. This latter suggestion was also endorsed by the Whitley Commission on Indian Labour and the Government of India have already taken up the consideration of the subject.

Air Routes : London-Alexandria-Karachi.

TIME TABLE OF THE JOURNEY

The route and time-table of the Imperial Airways mail service between England and India has always been subject to many changes

At the time of going to press the following route and time-table hold good —

The fares from Karachi are as follows — to Baghdad, £24 to Athens £69 to London £95 The through fare from Karachi to London allows for a weight of 100 kilos (221 pounds) per passenger, and a passenger is entitled to free conveyance of luggage to the extent of the difference between his own weight and the 221 pounds mentioned above The rate for excess baggage is just over twelve shillings per kilo Children in arms are weighed with and carried under the same tickets as their mothers or nurses, and other children are charged full fare

The Tata Air Mail Service operates between Karachi Bombay and Madras as an extension of the Imperial Airways service

Africa and the Far East

Several new air services which are of considerable importance to India have been inaugurated, and of these the most notable is the England Africa service which connects with the England India service at Cairo and provides an entirely new route between Delhi and South Africa

Other important air lines recently established are the French service between Paris and Saigon and the Dutch service between Amsterdam and Batavia, both of which pass through Baghdad and Karachi

Baghdad, in particular is developing rapidly in importance and it is said not without reason that it will soon become the Clapham Junction of the air This will certainly be the case if the projected services from Persia and Russia materialise

The proposed extension of the England India air mail to Australia is expected to be brought into partial operation in July 1933

The Indian Stores Department.

Current Rules of Working.—In addition to earlier orders of the same kind, Government in 1930 under pressure from the Public Accounts Committee of the Legislative Assembly issued orders that the purchase of all classes of stores handled by the Department which may be obtainable in India in conformity with the rules for the supply of articles for the public service, by the undermentioned departments and officers should in future invariably be entrusted to the Stores Department—

Indian Posts and Telegraphs Department,
Director Geological Survey of India
Chief Inspector of Mines in India
Chief Inspector of Explosives with the Government of India
Controller of Printing and Stationery India (except Printing and Stationery stores),
Controller of Patents and Designs
Director-General of Observatories
Principal Indian School of Mines,
Director of Civil Aviation in India
P W D Delhi Province (except special articles of furniture and fittings)
Superintending Engineer P W D Sindh and
Department of Industries and Labour Secretariat

Similar orders were issued, 1931-32 issued by the Finance Department to the Auditor General and the Central Board of Revenue by the Department of Industries and Labour to the Private Secretary and Military Secretary to H L the Viceroy and by the Department of Education in Health and Lands to the officers under their control. The Imperial Council of Agricultural Research the Localities Department and the Legislative Assembly Department also agreed to obtain their requirements through the Stores Department and the Railway Department made substantial additions to the list of stores the purchase of which is entrusted to the Department.

Revised Rules to regulate the purchases of stores (other than printing and stationery stores) by all departments and officers of the Central Government and of the Provinces other than Governors Provinces came into effect on 1 January 1931 with the object of effecting the policy of Government of making purchases of stores for the public service in such manner as to encourage the development of Industries in India to the utmost possible extent consistently with economy and efficiency. They prescribe that preference in making purchases shall be given in the following order—

First to articles which are produced in India in the form of raw materials or are manufactured in India from raw materials produced in India provided that the quality is sufficiently good for the purpose,

Second to articles wholly or partially manufactured in India from imported materials provided that the quality is sufficiently good for the purpose

Third to articles of foreign manufacture held in stock in India, provided that they are of suitable type and quality requisite,

Fourth to articles manufactured abroad which need to be specially imported

The new rules were calculated materially to widen the scope of operations of the Department

The total value of orders placed by the Department during the year 1931-32, the latest period for which figures are yet available was Rs 9,50,00,000 as compared with Rs 1,76,82,000 during 1920-21. There was thus a decline of 4.4 per cent amounting to Rs 16,82,000. The current financial stringency was largely responsible for this but the figures do not represent the full extent of the fall in the level of prices nor does it reveal the full extent to which consuming departments were compelled by the need for economy to reduce their demands. The number of orders received by the Department during the year amounted to 25,210 as compared with 21,233 during the preceding year and the total number of contracts placed amounted to 34,928, against 33,311 placed during 1930-31.

The activities of the Department led to continued decrease in the value of stores purchased through the London Indian Store Department.

The number of firms registered on the books of the Department at the close of 1930-31 as approved contractors was 2,670. The efforts of the Department to resist indigenous industry were continued with remarkable success during the year and at the close of the period the number of firms registered was 3,123.

The final accounts of the Department for 1930-31 closed with a total revenue of Rs 16,00,000 and a total expenditure of Rs 25,94,105, showing a net deficit of Rs 9,93,005. This is Rs 1,18,837 more than the result of the preceding year. The Department has under taken retrenchment measures calculated to save Rs 3,00,000 a year in addition to the amount saved by the 10 per cent cut in salaries of the staff. The Department thus claims to have effected an improvement in its financial position.

The question of definitely declaring the department to be a commercial or service undertaking was under consideration of Government and they decided in January 1930 that it could not for the present be declared a commercial undertaking, as some of its activities were admittedly not of a commercial character and that it should therefore be treated as a public service department.

—of any property under the Adminis- trator General's Act, 1874, Section 31		10 0
—of any trust property without con- sideration from one trustee to another trustee or from a trustee to a benefi- ciary—Five rupees or such smaller amount as may be chargeable for transfer of shares.		
Transfer of Lease by way of assignment and not by way of under lease—The same duty as a conveyance for a con- sideration equal to the amount of the con- sideration for the transfer		
Trust, Declaration of—Same duty as a Bond for a sum equal to the amount or value of the property concerned but not exceeding		15 0
Revocation of—Ditto, but not exceed- ing		10 0
Warrant for Goods		0 8

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the Indian Year Book. The Congress was founded in 1885 by Mr. Allan Octavian Hume, a retired member of the Indian Civil Service and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be—

Firstly the fusion into one national whole of all the different and discordant elements that constitute the population of India.

Secondly the gradual regeneration, along all lines, mental, moral, social and political of the nation thus evolved and Thirdly, the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focussing the chief political grievances and in providing a training ground for Indian politicians. But in 1907 the Extremists, chiefly of the Deccan and the Central Provinces, who had for some time chafed under the control of the older generation, succeeded in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that—

The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self governing members of the British Empire and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country.

For some years following 1907 efforts were made to heal the split and these were without avail until 1910 when a re-united Congress met at Lucknow under the presidency of Babu Ambika

Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial, the difference between the Moderates and the Extremists was fundamental, the Extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi and his lieutenants.

In 1927 the Congress actually adopted independence as the goal of India. In the following two years the Congress made what the extreme leftists described as a climb-down while the Liberals moved towards the left with the result that for a time there appeared to be a commonness of purpose between the Liberals and Congressmen. At its 1928 Session the Congress while adhering to independence agreed to accept Dominion Status if granted by the end of 1929. Things were tending towards a satisfactory settlement when in the latter half of 1929 the Congress insisted on the immediate grant of Dominion Status or an assurance that Dominion Status would be the basis of discussion at the Round Table Conference to be convened in England between representatives of England and the two Indies. Here was the parting of the ways. The Liberals went their way and the Congress its own. In fulfilment of the ultimatum issued at its previous Session the Congress at its 1929 Session, declared for complete independence or Purna Swaraj. Throughout the year 1930 the Congress was engaged in a defiance of the law of the land which it was hoped would help India to attain complete independence. Nearly next year the Congress actually suspended civil disobedience by virtue of an agreement arrived at with the Government but the fulfilment of the terms of this agreement gave rise to trouble and another agreement was concluded. As a result of this Mr. Gandhi on behalf of the Congress actually went to London to take part in the Round Table Conference. While he was away things took a turn for the worse in the country and matters reached a crisis with the birth of the New Year. In 1932 the Government bent all its efforts to making it impossible for the Congress to carry on its subversive activities and succeeded fully in its object. Congress was crushed and all forms of Congress work throughout the country were successfully prevented. In fact as well as in law Congress ceased to exist. It became impossible for Congressmen even to hold their annual sessions in 1932 and in 1933.

THE NON-CO-OPERATION MOVEMENT.

It was in 1920 that Mr. Gandhi, who had only in the previous year unsuccessfully started his Passive Resistance struggles as a protest against the Rowlatt Act, conceived his idea of non-co-operation. Originally intended to be a protest against the British policy towards

Turkey the fighting of two other grievances was later on added to its first object, namely the punishment of officials in the Punjab Martial Law regime and the securing of Swaraj for India. Mr. Gandhi and Mr. Bhauktal Ali were able in 1920 to get the Calcutta Special Congress

to endorse their programme of progressive non-violent non-co-operation which was reiterated by the annual session at Nagpur which on Mr Gandhi's motion, changed its old creed into the attainment by India of Swaraj by legitimate and peaceful means. The stern measures adopted by local Governments led to the imprisonment of a large number of active Congressmen with the result that the Ahmedabad Congress in 1921 made a grim resolve to challenge the repression movement by appointing Mr Gandhi as dictator and by resolving to start a 'No Tax' campaign at Bardoli. The riots in Chauri Chaura in 1922 preceded by the Bombay riots in 1921 during the Prince of Wales visit (see 1923 and 1924 editions of this book) opened Mr Gandhi's eyes to the impossibility of maintaining a non-violent atmosphere under existing conditions. He suspended his proposed civil disobedience campaign, and replaced it by what is known as the Bardoli Programme which eschewed all the aggressive items of non-co-operation in favour of the promotion of intercommunal unity and khaddar. Soon after Mr Gandhi was arrested for sedition, tried and sentenced to undergo imprisonment for six years (See 1923 and 1924 editions).

This turn of events threw cold water on the enthusiasm of non-co-operators who got discouraged. In order, therefore to sound the country's readiness for aggressive action once more, the All India Congress Committee appointed a Committee, known as the Civil Disobedience Committee, in June 1922. The Committee toured the country and in October, 1922 produced two reports one favouring Council entry to offer obstruction to Government and the other recommending the adoption of the Bardoli Programme. A battle royal ensued between the two parties for two or three years, the Swarajists—or the Co-operators as they were derisively called by the non-co-operators—carrying the day throughout. Every little triumph of the Swarajists meant a diminution of the prestige and influence of the No Changers. This went on for some time until the Belgaum session of the Congress, presided over by Mr Gandhi himself, suspended the non-co-operation programme. Thereby the movement was practically killed and strange to say it received its death blow at the hands of the very author of its being. But the fond parent did not lose heart and bided his time. His chance came in 1928 when the Congress was split into two warring camps. One was ready to accept Dominion Status for India while the other would have nothing short of independence. At the psychological moment Mr Gandhi staged a re-entry into the political arena—he had been but a silent spectator during the five preceding years—and, professing to effect a compromise within the Congress, provided a loophole for the revival of non-co-operation. Although Dominion Status was actually declared in 1929 to be the goal of Indian political progress Mr Gandhi insisted on having it on the spot and when that was naturally refused he returned to his old love non-co-operation and boycott. He had been biding his time, and the astute politician, that he is he reintroduced in December 1929 his formula that had been dead

five years. Indeed the Congress Executive was authorised to give the signal also for a campaign of non-payment of taxes and civil disobedience. Early in 1930 the Congress executive appointed Mr Gandhi as Dictator for all India and gave him power to launch civil disobedience as and when he thought fit. This Mr Gandhi did in March and practically the whole country was set ablaze. There was open defiance of the law all over the land notwithstanding the efforts of the Government to put down illegal activities. The movement waned by the end of the year through sheer exhaustion and civil disobedience was suspended early in 1931 as a result of negotiations between the Viceroy and Mr Gandhi. The year 1931 was a year of negotiations although the discussions centred on alleged breaches of the Viceroy Gandhi understanding. The efforts for peace were carried to the point of inducing Mr Gandhi to participate in the Round Table Conference in London to formulate a constitution for India. All this, however, proved to be a lull in the storm which again broke out in fuller fury early in the New Year. On the ground that the Government had broken the understanding arrived at between the Viceroy and Mr Gandhi the Congress leader declared in favour of a revival of aggressive non-co-operation. The Government however was apparently prepared for it simultaneously with the announcement of the Congress decision the Government set in motion its powerful machinery and grappled with the renewed non-co-operation movement before it had time to take root again. Civil disobedience was scotched before it was born this time. In short the Government killed the non-co-operation movement (See Congress in 1932-33).

Congress in 1928-31

The career of the Congress between the Belgaum session, when the N C O movement was suspended, and the years 1929-30, when civil disobedience was revived, was comparatively dull. During the first half of 1925 the Congress policy was one of aimless drift. The death of Mr C. R. Das demoralised the Swarajists. Mr Gandhi promptly went to their rescue and at the end of the year the Swarajists political programme was formally adopted by the Calcutta Congress. The first session of the Congress which met in Assam during Christmas week in 1926 set its face against the acceptance of ministries or other offices in the gift of the Government—in other words disavowed Responsible Co-operation, a new creed which had sprung up within the Swarajist ranks—and approved of the policy of rejection of budget and refusal of supplies until a response to the national demand was forthcoming.

All this talk and quarrel about the internal affairs of the Congress were set at rest by the non-inclusion of Indians on the personnel of the Royal Commission on Indian Reforms. Most of the leaders fancied that it would be an insult to India if Indians were not appointed members of the Commission. Even moderates, reputed for their sobriety and reasonableness, affected extremism. The Viceroy endeavoured—but in vain—to explain the position to Indian leaders (See Year Book of 1928).

Congressmen of course met during Christmas 1927 and resolved to boycott the Simon Commission, declared independence as the goal of India and offered some solutions for the Hindu-Muslim problem. In the following year the Congress in its plenary session at Calcutta declared specifically though conditionally that Dominion status would be acceptable to India. This it will be recalled marks a return to 1908 when, soon after the Surat split, it was stated that the objects of the Congress were, among other things, the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire. This, however, proved to be a mere smoke screen raised by Congress tacticians to conceal from the world their real intention which was disclosed in December 1929. More about this presently.

The boycott of the Commission was a miserable failure and this reminded the Congressmen of the next duty which the 1927 session had imposed on them, namely the drafting of a Swaraj constitution for India. This they set out to do about the middle of 1928 when representatives of almost all political organisations met in Bombay at the invitation of the Congress Executive and appointed a Committee presided over by Pandit Motilal Nehru to undertake the task.

The Committee consulted various leaders in the country and after two or three months hard labour produced a document which however instead of being an all parties report evoked more controversy than any other proposal in recent years regarding the future of India. An All Parties Convention met at Calcutta for the purpose of receiving and considering the All Parties Committee's report. The Convention adopted the Committee's proposal that India should have the same constitutional status in the community of nations known as the British Empire as the other Dominions with a Parliament having powers to make laws for peace, order and government of India and an executive responsible to that Parliament. The Convention, however, failed to find a solution acceptable to all for the communal question. (See Year Book of 1929).

The Congress which met in Calcutta during Christmas in 1928 under the presidency of Pandit Motilal Nehru was divided into three camps, the advocates of complete independence, those who wanted Dominion status and nothing beyond that, and Pandit Motilal sandwiched between the two with one foot in either camp. This was just the opportunity for which Mr. Gandhi had apparently been waiting and he staged a come back at the psychological moment. He threw in his weight with Pandit Motilal and sponsored a compromise formula. This satisfied neither wing but eventually a resolution was adopted which approved of the Nehru Report as a great step in political advance and, whilst adhering to the Madras resolution on independence, the Congress was prepared, subject to the exigencies of the political situation, to adopt the Nehru constitution if it was accepted by the British Parliament before the expiry of 1929 and if that did not happen the Congress would revive non-violent non-co-operation, Congressmen could, in the meanwhile, carry on propaganda for independence.

The political outlook was gloomy, indeed and there was a clear call for a generous gesture from Britain. Lord Irwin the sympathetic Viceroy saw this and strove his utmost to placate legitimate Indian feeling. He undertook a trip to England on four months leave and had long conversations with the India Office Chief and the newly formed Labour Cabinet of Britain. He returned in the last week of October and within a few days of his arrival issued from Delhi a statement which has since become famous as the Viceroy's Declaration of October 31, 1929. I am authorised, he said, on behalf of His Majesty's Government, to state clearly that, in their judgment it is implicit in the Declaration of 1917 that the natural issue of India's constitutional progress as there contemplated, is the attainment of Dominion Status. His Excellency announced the British Government's intention to summon a conference of representatives of British India and Indian States to discuss British Indian and All Indian problems to seeking the greatest possible measure of agreement for the final proposals to be placed before Parliament.

The main feature of the Congress session held shortly after was the reasascendancy to power of Mr. Gandhi. The principal resolution went through successfully and in fulfilment of the Calcutta Congress ultimatum, independence was declared when the New Year was rung in and the Independence flag was hoisted.

Events moved very fast in India in 1930 which has been epochal in the country's political history. On the one hand the British Government took practical measures to devise a constitutional machinery that would place India on the highway to responsible self-government (see Round Table Conference section) on the other the Congress, the premier political organisation of the country, made a bold bid for complete independence—or Purna Swaraj.

Several factors strengthened the Congress movement in 1930. The worldwide trade crisis, of which India did not escape her share, was responsible for a general feeling of depression and discontent all over the land and the people, as usual, blamed the Government for their sufferings. The Simon Commission's report (see Simon Commission chapter) which was not acceptable to the majority of Indians, added to the prevalent want of faith in the Government's intentions. The Congress exploited this circumstance and chalked out a programme which had a wider appeal than in 1920. The N.C.O. movement ten years ago was confined to the few, the civil disobedience movement of 1930 appealed to the many. That was intellectual, this, popular. At least one of the planks of the present agitation, namely non-payment of land revenue, coincided with the ryots inability to pay owing to falling commodity prices. The breach of the Salt Act boycott of all foreign cloth and of British goods and the no-tax campaign were easier to practise than the boycott of law courts and schools. On the present occasion the Congress captain arranged his field efficiently. Mr. Gandhi, who was appointed Dictator-in-Chief of the Congress, nominated provincial dictators, who,

If arrested were to be succeeded by their respective comrades. Small committees of action known as War councils were set up throughout the land, ready to launch the campaign. The leader gave the signal in April by himself breaking the salt law and people followed his example in several places. When this went on for some time, the police had forcibly to disperse the people engaged in illicit salt manufacture, which led to numerous casualties. And as these demonstrations were staged in public places, they produced great effect on the popular mind. Thousands of arrests were made and jails all over the country were flooded over 54,000 were convicted in the year for offences connected with civil disobedience. People lost their fear for the lathi nor did they hesitate to go to jail. Youths, women and children threw themselves into the movement, thereby lending colour to it and attracting international attention. Prabhat Kheri, or religious-cum political processions, were taken out through public streets, singing Congress songs and broadcasting revolutionary doctrines. Demonstrations leading to breaches of the peace, were suppressed by the police which led to further demonstrations and clashes. Some of these as in Sholapur, Peshawar and Chitaur took a very serious turn. Unrest shattered confidence and credit, and trade and commerce were paralysed. Import and export figures and railway returns recorded a steady downward trend. Towards the end of the year a veritable deadlock ensued in which people went on breaking laws and the Government continued to suppress their activities while the British Government was striving hard with the help of right thinking and sober-minded Indian leaders, to evolve a formula on which to base the future constitution of India.

Mr Gandhi occupied the greater part of the stage in 1930. India was good copy in Europe and more so in America, where journals applauded Gandhi. This was his final struggle he declared, and he would not return to his Ashram at Sabarmati if he failed to win Swaraj for India. In his own words he had burnt his boats and set out on the famous march on foot from Ahmedabad to Dandi where he inaugurated his pet movement. He had the satisfaction of seeing a large number of people following his lead, but after his arrest at midnight on May 5 the movement ceased to be non violent.

Civil Disobedience Movement.

In pursuance of the resolution of the Lahore Congress, it was decided by the Congress leaders early in the year to test the strength and willingness of the country to undertake and carry on a programme involving loss, suffering and sacrifice, and with this end in view they organised what has since been called the 'Independence Day' demonstration. The response according to the Congress leaders, exceeded anticipations. Having thus ventilated the new revolutionary policy of the Lahore Congress and satisfied themselves that their methods would obtain general support in the country, the Working Committee appointed at Lahore met at Ahmedabad and decided to inaugurate mass civil disobedience. It appointed Mr Gandhi as the 'Dictator' of the Congress and gave him full powers to launch, conduct and carry on the movement.

Before taking what he described as his final plunge in politics Mr Gandhi wrote in first week of March his famous letter to the Viceroy announcing his determination to launch civil disobedience if his demands were not met. They were the famous Eleven Points of Mr Gandhi—total prohibition, reduction of the rupee ratio to 1s 4d, reduction of the land revenue to at least 50 per cent and making it subject to legislative control, abolition of the salt tax, reduction of the military expenditure to at least 50 per cent to begin with, reduction of the salaries of the higher grade service men to one half or less so as to suit the reduced revenue, protective tariff on foreign cloth, the passage of the Coastal Traffic Reservation Bill, discharge of all political prisoners, withdrawal of all political prosecutions, abrogation of section 124 A, of the Regulation of 1818 and the like and permission to all Indian exiles to return, the abolition of the C. I. D. or its popular control and the issue of licenses to use fire-arms for self-defence subject to popular control.

The reply sent to Mr Gandhi by the Private Secretary to the Viceroy regretted that Mr Gandhi contemplated 'a course of action which is clearly bound to involve violation of the law and danger to the public peace'.

When his impossible demands were turned down Mr Gandhi outlined a programme of civil disobedience consisting of various items calculated to subvert the Government by breaking certain laws reducing its income from excise and customs duties, inducing Government servants to resign picketing liquor shops and shops dealing in foreign, particularly British goods, mainly British cloth, and urging the masses not to pay land revenue, chowkidari tax and forest grazing fees. The salt Act was the first target.

After organising his forces in various centres in the country, Mr Gandhi inaugurated his civil disobedience movement by setting out on a march on foot from his Ashram at Sabarmati with the object of breaking the salt law and defying the Government! 'Dictator' marched through Gujarat making halts en route. This part of the country, where most men, women and children regarded him as an avenger (incarnation of Deity) thanks to the propaganda of Mr Vallabhbhai Patel, was only too ready to accept his advice. At each one of the halting places a number of Government servants announced their resignations. The people were urged to look out for his signal and carry on the fight even if he was arrested. At the end of three weeks he reached Dandi, a village on the coast near Surat, and on April 6, the fateful day on which the movement was really initiated he picked up salt on the seashore without paying duty. The police did not interfere. His followers started manufacturing salt by heating sea water and the salt so manufactured was sold in small packets all over the country. This was the signal for Congressmen to break the law all over the country simultaneously.

On the first few occasions, the Government merely looked on, but the law-breaking fever spread fast and wide. Eventually the authorities took measures to prevent the manufacture

and sale of illicit salt. They were resisted by Congress volunteers who formed a cordon round the spot where salt was made and defied the police to arrest them. The police arrested them at first, but they could not obviously arrest hundreds of spectators who though not actually engaged in salt making were encouraging the law-breakers. The police and indulging in hostile demonstrations. When these crowds began to indulge in violence against the police the latter had perforce to disperse them by means of the regulation staff known as 'lathi'. This went on for a while without bringing Purna Swami any nearer. Mr. Gandhi found a way out of the rut by declaring that he proposed to raid the salt works at Dharasana near Surat. Similar raids were planned on the salt depot at Wadala in Bombay. Shortly after this however Mr. Gandhi was arrested under the provisions of a century old Regulation and confined during the pleasure of the Government as a state prisoner whose activities were a danger to the Government established by law.

The raids on the salt works at Dharasana and Wadala were carried out repeatedly and hundreds were injured when the police repelled the raid and dispersed the raiders and sympathisers. The advent of the monsoon put an end to salt making and salt depot raids. But other illegal activities were taken up.

The anniversary of a dead leader 'Independence Day' or some such pretext was utilised to organise anti Government demonstrations. The arrest of persons who were counting arrest was also the occasion for a display of hostility against the Government. Such disturbances occurred in several places and the police had to impose a ban on meetings, processions demonstrations and the like which invariably disturbed the public peace and led to clashes. Even these prohibitory orders were disobeyed thereby compelling the police to use force. Two such instances occurred in Sholapur and Peshawar. In the former place the police were attacked constables mobbed and murdered in broad daylight and Government buildings and law courts set on fire. Martial law was introduced and quiet restored after a long time. In Peshawar also rowdy crowds defied the police and even the military. British troops were stoned. People were so much inflamed that it took a number of weeks for the return of normal conditions. It was revealed during the Peshawar disturbances that the Congress propaganda had to some extent interfered with the discipline of a few Indian sepoys.

Nor did the Congress stop here. Thanks to its persistent propaganda, the martial races inhabiting the border were taught to hate the British and to expect the establishment of 'Gandhi Raj' at an early date. A belief that the British administration was weakening spread across the border to the Afridis who carried out a series of raids on Peshawar. Yet that these were by any means successful they were easily repelled and severely punished. But it would not do to allow them to continue in the false belief that they could defy the British Government with impunity. The Government, therefore, took prompt punitive measures and put an end to the raids.

Congressmen living in inland areas stirred up villagers against the Government and persuaded them to refuse to pay dues for grazing cattle in the forests. Forest regulations were broken.

Gujarat where Mr. Gandhi's influence was greatest was the stronghold of the movement for non payment of land revenue. In all the four districts of Gujarat ryots were persuaded to withhold payment of arrears of the previous years and, later on of the instalments of the following year.

The no tax campaign and the seditious appeals calculated to disturb the loyalty of the police and the troops could not be allowed to continue. Similarly the authorities could not look on when Government servants in Gujarat who refused to resign their posts in obedience to the Congress mandate, were subjected to countless hardships in the shape not only of social boycott but also refusal of daily supplies and even of water. In several instances Government servants were coerced and prevented from doing their duty—things were made so hot for them. The activities of the Congress in other spheres also became too mischievous to be tolerated any longer and the Viceroy issued a series of Ordinances. One of these gave power to the Government to confiscate the premises of Congress offices whence baneful doctrines emanated. Refusal of normal supplies and services to Government servants was also made an offence. Later in the year all the Congress and allied bodies were declared unlawful associations under another Ordinance.

One of the main objects of the Congress was to deplete the Government treasury by attacking the excise and customs revenue. Excise was the main source of revenue to most provinces and customs to the central government. It was also intended seriously to affect British industry particularly the Lancashire textile trade. For this purpose systematic picketing of liquor and foreign (especially British) cloth shops was resorted to. This work was reserved for the large number of women who, for the first time in the history of politics in India joined the movement in response to Mr. Gandhi's appeal. This willing co-operation of the non-martial community made the task of the women pickets somewhat easy but in several cases coercion replaced peaceful persuasion and the consuming public were put to untold hardships. The Viceroy issued an Ordinance making picketing accompanied by intimidation or coercion punishable.

The strongest ally of Mr. Gandhi in the spread of the civil disobedience movement was the Indian press especially the vernacular press. The Viceroy at first revived the Press Act by means of an Ordinance but when this did not have the desired effect he promulgated the Unauthorised News-sheets Ordinance. This Ordinance helped to suppress seditious propaganda generally but in Bombay city the Congress continued to issue daily a one page bulletin, despite vigorous efforts by the police to put an end to it.

The upheaval had its own effect on impulsive and immature youths and the year witnessed a large number of revolutionary outrages, in many of which bombs and fire-

arms were used. Police officers were killed and an attempt was made to assassinate the Governor of the Punjab. An armed raid was made on the Chhisiang armoury. Many deplored these incidents, but the mischief had been done.

The year 1931, however, opened bright for before the end of January, Mr Gandhi was again a free man. His release was a magnanimous gesture on the part of the British Government intended to create a favourable atmosphere in India for the reception of the Premier's statement of 16th January and to give the Congress a fair chance to consider the offer embodied therein. On the very day on which the Premier made his famous pronouncement (See Indian Round Table Conference) leading delegates in London urged the Premier to follow up his statement with a generous gesture in the shape of general amnesty to all political prisoners. Mr MacDonald complied and within a week the principal Congress leaders were released from prison.

They soon met together and considered the Premier's statement which of course, they deemed unacceptable, although they did not say so publicly. At any rate they refused to go a step further unless the Government ceased its operations against the Congress. A deadlock was again threatened, but, thanks to the good offices of eminent Liberal leaders negotiations were set on foot between the Government and the Congress. But it was not quite easy for the Congress to switch from non-co-operation straight to co-operation. Its leaders were obsessed by considerations of prestige and a number of insignificant and artificial difficulties were raised.

After prolonged negotiations and bargaining the Congress secured the Government's assent to what has since become famous as the Irwin-Gandhi Pact or the Delhi Pact. (See last year's Indian Year Book).

This "truce" was signed on the 5th of March and was hailed all over the country as the dawn of a new era of co-operation. The past was for a time forgotten and there was a lull in political activity. All were eagerly looking forward to the Congress delegates contributing the weight of their influence and experience to the success of the second Round Table Conference. Nevertheless, a strong under current of resentment ran through the ranks of the Congress who openly complained that Mr Gandhi had weakly surrendered to the Government in agreeing to call off the struggle. This feeling which was held by the wild men of the left and impetuous youths, was enhanced by the execution of Bhagat Singh and his accomplices who had been judicially found guilty of murder and other terrorist crimes. The execution was the signal for a furore in the country, much to the chagrin of Mr Gandhi.

It was in this state of feeling that the forty-fifth session of the Congress met at Karachi under the Presidency of Mr Vallabhbhai Patel.

Mr Patel's presidential address to the Congress was more important than the usual addresses of Congress Presidents as it indicated the lines on which Mr Gandhi presented the Congress case at

the Round Table Conference later. "Independence does not exclude the possibility of equal partnership for mutual benefit and dissolvable at the will of either party" declared Mr Patel. He denounced those who urged the severance of the British connection. Britain's help would be of great value to the country. India needed her military skill for her defence and in several other spheres British help would be invaluable to the country. But, power and control, including financial control, must be in the hands of Indians. He declared that the Delhi Agreement was perfectly honourable to both parties. Under its terms, it is open for us to press for puras swaraj, to ask for complete control over our defence forces, foreign affairs, finance, fiscal policy and the like.

The outstanding feature of the Karachi session was the unprecedented outburst of revolutionary sentiment which throughout characterised its proceedings. It was always there but dormant and the execution of Bhagat Singh stirred it up. The revolutionaries particularly from Bengal asserted themselves publicly and a determined effort was made to torpedo the Delhi Pact. The intensity of feeling could be gauged by the action of a few youths who on the arrival of Mr Gandhi went to the length of presenting him with a black flower in token of Bhagat Singh's execution. Thus Mr Gandhi had to work against insuperable odds and it speaks volumes for his great personal influence that he managed to carry the day. This, however, he achieved only by subscribing to a resolution which only half heartedly condemned terrorist outrages, extolling at the same time the terrorists' motives and their "courage and self-sacrifice". In this connection it may be noted that following this resolution a number of revolutionary crimes were perpetrated during the year—the murder of the Inspector-General of Police and a District Magistrate in Bengal, the shooting dead in open court of a District Judge, and the attempt on the life of the Governor of Bombay being some of the most outstanding outrages. Mr Gandhi, of course, repented—but as is usual with him too late.

Commenting on one such outrage he expressed regret at having lent his support to the Bhagat Singh resolution at Karachi and admitted, "We are overdoing the extolling of murderers. So much had the situation got out of control that later in the year he had perforce to make an open appeal to the revolutionaries not to spoil India's cause by terrorist crimes and at least to suspend the cult of the bomb during the period that the Congress was trying his method."

To return to the Karachi Congress. Such was the charm exercised by Mr Gandhi over his followers, sober as well as terrorist, that, in the midst of cries denouncing the Delhi Pact as a surrender, the open session of the Congress almost unanimously ratified it and nominated Mr Gandhi to proceed to the R.T.O. as its representative.

The resolution ran. This Congress, having considered the provisional settlement between the Working Committee and the Government of India endorses it, but desires to make it clear that its cult of independence remains intact. The Congress delegation will work for this goal so as to give the nation control over the army, external affairs, finance and economic policy and

to have a scrutiny by an impartial tribunal on the financial transactions of the British Government in India and to examine and assess the obligations to be undertaken by India and England—with right for either party to end the partnership at will. Provided, however, that the Congress delegation will be free to accept such adjustments as may be demonstrably necessary in the interests of India, the Congress appoints Mr Gandhi as its delegate to the R T U with the addition of such representatives as the Working Committee may add later.

Another important resolution passed by the Congress defined 'Purna Swaraj'. This again was a sop to the clamant left wing and its passage gave a clear indication of the way the wind was blowing. The main idea underlying the resolution was the creation of a socialistic state as outlined by Pandit Jawaharlal Nehru in his presidential address to the previous session of the Congress at Lahore. Astute politician that Mr Gandhi is, he saw in this resolution a formula which would prevent an alternative revolutionary programme from taking the field.

'Purna Swaraj' was defined as a government which would secure certain specified fundamental rights for the people, living wage for the workers, reduction of land revenue, levy of inheritance tax, adult suffrage, free primary education, reduction in military expenditure and in civil servants' salaries, control of key industries etc.

The feeling that prevailed at Karachi char acterised the activities of the Congress throughout the rest of the year—the same restlessness at having to accept the Delhi Pact, the same lip condemnation of terrorism side by side with sympathy with terrorists. The 'War Lords' of the Congress were chafing under the enforced silence and could hardly resist the tendency to create mischief.

It was very easy for them to pick a quarrel with the Government over the implementing of the Delhi Pact. They accused Government of being slow and niggardly in releasing political prisoners. They insisted on the reinstatement of all village officials who had resigned when the Congress campaign was at its height—even in the case of those who had been replaced since. They claimed substantial, if not wholesale remissions of land revenue on the slightest pretext. They bitterly complained against alleged excesses of the police in collecting land revenue. Taking shelter under the withdrawal of the anti picketing ordinance they continued their picketing operations as they did during the civil disobedience movement. This last led to several clashes, notably in Cawnpore where aggressive picketing resulted in serious and prolonged Hindu Muslim rioting—described as a "ghastly holocaust"—involving widespread massacre.

Speaking of the Cawnpore disturbances and the communal tension that they led to, one is reminded of the growing differences between the Congress and the Muslims that were a feature of the year's politics. Ever suspicious of Congress bona fides towards Muslim rights, the Mahomedans kept aloof from the civil disobedience movement and any attempts on the part of Con-

gress leaders to rope them in resulted in a clash. Mr Gandhi however made repeated attempts to placate the Muslims making numerous offers to meet their demands from time to time. The bulk of the Muslim community was particularly angry with Mr Gandhi and the Congress for the tactics adopted by them to secure the support of the entire community to an agreed formula. Mr Gandhi and the Congress sought to make capital of the presence of a few Muslims in the Congress calling themselves Nationalist Muslims. Congress was ready, it was stated, to accept any scheme on which the entire Muslim community including the Nationalist Muslims, put forward and attempts were accordingly made in Bombay Ahmedabad, Bhopal, Delhi and Simla, in various parts of the year, to evolve a communal formula, but all fell through.

The Congress made two more attempts in July to arrive at a formula and eventually drew up a compromise between undiluted communalism and undiluted nationalism. Joint electorates were to form the basis of representation in the future constitution of India but it was agreed that there should be reservation of seats in the Federal and Provincial Legislatures on the basis of population with the right to minorities to contest additional seats in any province where they were less than 25 per cent. This was of course not acceptable to the Muslims, who, to a man, stood by the Fourteen Points.

Disappointment at the failure to solve the communal tangle rendered the political outlook gloomy and the Congress leaders began to wonder whether any good would result from their participation in the Round Table Conference. Mean while those of them who were looking for a fight had succeeded in working up in the countryside particularly in Gujarat and the U P, a situation which the Government could hardly tolerate.

In the United Provinces, particularly an agrarian dispute of a purely economic character aggravated by growing trade depression, was turned to political advantage by Congressmen. In the result, although the no-rent campaign being part of the civil disobedience movement was abandoned under the Delhi Pact, it was revived now, nominally as an economic agitation but really as a political weapon. The Government had perforce to take measures to ensure the collection of land revenue, but the Congress protested against them. This was added to the long list of sins and omissions and commission of which the Congress accused the Government. Similarly in Gujarat it was alleged that the police were using excessively coercive measures to collect Government dues.

On all these grounds, summarily, Mr Gandhi declared that the Delhi Pact had been broken by the Government and that, therefore, he was released from his obligation thereunder to participate in the Round Table Conference on behalf of the Congress. The civilians have undone the statesman's work," Mr Gandhi complained. Mr Gandhi released for publication what he described as a charge-sheet against the Government, who replied with an equally long list of instances in which the Congress agents had broken the Delhi Pact. Lengthy correspondence

passed between Mr. Gandhi and the officers of the Government of Bombay and the Government of India, the main point of which was Mr. Gandhi's demand that the Congress should be recognised as an intermediary between the people and the Government and the Government's firm repudiation of that contention. Numerous interviews took place between Congress leaders and Government officers, all of which unfortunately proved fruitless. This new deadlock again darkened the political horizon but Mr. Gandhi was induced to ask for an interview with the new Viceroy Lord Willingdon, to "clear up certain misunderstandings."

Then began what were known as the Simla talks. Mr. Gandhi asked for an impartial inquiry into the incidents at Bardoli and once again the Government of India turned it down. Nor was the Congress allowed to negotiate with the Government as a parallel body on an equal footing. Eventually, however, the Government offered to institute a departmental inquiry into the charges made by the Congress against officials in Bardoli and this provided a loophole for the Congress to get out of the awkward corner into which it had placed itself. Affecting to be satisfied with this concession, Mr. Gandhi agreed to go to London.

(The part played by Mr. Gandhi at the E. T. C. is referred to in the "Indian Round Table Conference" section.)

With Mr. Gandhi's departure continued in India and his henchmen continued their activities in defiance of both the Delhi and the Simla Pacts. Very soon an unsatisfactory situation was created in India which found its counterpart in the poor progress made in London towards reaching an agreed formula for the future constitution of India.

Congress propaganda in areas like the North-West Frontier Province, easily susceptible to subversive doctrines resulted in a flare-up. The tribes on and across the Frontier were led to believe that the British authority was on the wane, and Peshawar was actually invaded. The "Red Shirt" movement, organised by a follower of Mr. Gandhi, was assuming menacing proportions and the Government had to act. An Ordinance was promulgated with a view to checking the spread of this movement, and Khan Abdul Gaffar Khan, its author, was deported from the scene of his operations.

Similarly, an Ordinance was issued to check the aggressive no-rent campaign in the United Provinces, and Pandit Jawaharlal Nehru was arrested for disobeying certain orders passed on him under this Ordinance.

The hollowness of the Congress charges was revealed by the findings of the Inquiry Officer who went into the allegations against the police and the Government in Bardoli. He held that there had been no cases of undue coercion and found most of the Congress charges unfounded.

This gloomy situation coincided with the return of Mr. Gandhi on the 28th of December, without having achieved anything substantial at the Round Table Conference beyond re-stating the

impossible Congress demands proclaimed many a time before. The stage was thus set for another political struggle in the country, which began in the first few days of the new year with the arrest of Mr. Gandhi.

Congress in 1931-32.

The Government had planned out its programme thoroughly and was ready to meet any emergency. Within a few hours of the arrest of Mr. Gandhi the Government issued ordinances of a comprehensive character giving wide powers to the executive to deal with the civil disobedience movement with determination so that there was little scope for escape on the part of Congressmen. The ordinances enabled the executive to arrest any person on mere suspicion and keep him or her in detention up to a period of two months. At the end of this period an order was issued restricting the activities and movements of the suspected person, and when that order was broken the person was convicted for a breach of that order and sentenced to long terms of imprisonment ranging from six months to two years. In certain cases heavy fines were levied in addition. The powers of the magistracy were so revised as to alter the provisions of the Evidence Act and the Code of Criminal Procedure and summary trials became the rule. The power of appeal was much restricted. Powers of search were made wider and the sources from which the Congress movement was financed were unearthed and confiscated by means of extraordinary powers given to the executive in that behalf. The press was restrained by a special ordinance preventing it from carrying on propaganda for the Congress movement in any manner or giving publicity to its activities in any shape or form.

With such wide powers put into operation with extraordinary speed and rigidity Congressmen all over the country were hauled up within the very first week after the issue of the ordinance. In most cases they were rounded up on suspicion arising out of their past conduct. Later on option was given to them to give undertakings about their future behaviour and thereby obtain their release. In some cases the authorities succeeded in securing such undertakings, but in the majority of cases Congressmen remained firm. In the first three months of the operation of the ordinance the jails in almost every province were full to overflowing and special accommodation had to be found for the thousands of prisoners who were incarcerated under the new policy.

The wide and sweeping character of the ordinances had a remarkable effect on the politically minded sections outside the Congress. The first reaction found vent in strong protests against the provisions of the ordinances and more particularly against the indiscriminate manner in which they were put into operation. Appeals were made by the Liberals and Independents to the Government to soften the rigour and to give better treatment to political prisoners.

When the life of the ordinances was about to expire at the end of six months the Government in the centre as well as in the various provinces

acknowledged that they had almost succeeded in scotching the Congress movement but they pleaded that, although the movement had been brought under control the danger of its revival was not absent. It was therefore decided to consolidate all the ordinances into one omnibus ordinance and renew them till the end of December. Before the year closed the Government came forward with Bills both in the centre and in the provinces to put into the form of a statute the more important provisions of the council dated ordinance. The legislatures in the country had so strong Congress element on account of the boycott of councils adopted by the Congress during the last general election so that the Government did not find much difficulty in getting the ordinance bills passed into statutes. The only concession they made was to limit its duration to one or two years in the different provinces.

After the first flush of the operation of the ordinances the Congress movement gradually weakened. No doubt the Congress had its so-called Emergency Councils and Districts carrying on civil disobedience activities in a spasmodic manner but it became apparent as the year 1932 advanced that the support from the country became less and less month by month.

Early in the year 1932 an attempt was made to hold the annual session of the Congress at Delhi. Similarly another attempt was made early in 1933 also. On both occasions Pandit Madan Mohan Malaviya came forward to preside. Batches of Congressmen went from different parts of the country to Delhi and Calcutta, respectively, but they were all arrested on leaving their places or before reaching their destination and set free again after the date of the projected session. The Congress claimed that in spite of all this obstruction they held the sessions and passed resolutions reaffirming the civil disobedience movement but the whole thing was practically reduced to a farce. It is not really a game of hide and seek. It is not impossible in such large cities like Delhi or Calcutta for a handful of men to meet in spite of the determination of the police to prevent any formal meetings. Such was really the case. When the police were not within sight and before they could come a few men crowded together and held the sessions and passed resolutions. No sooner was this done and in fact, while the session was in progress the police arrived, dispersed the meeting and arrested those who participated in the proceedings.

Notwithstanding the strictest watch of the police, the Congress managed to keep up its publicity by regularly issuing Congress bulletins day after day in different parts of the country and the efforts of the authorities to trace it to its source proved unavailing in some cases. But though the general activities of the Congress were suppressed in all the provinces it kept up its life—certainly in an attenuated form—in important towns like Bombay. In this city the Indian commercial community threw in its weight on the side of the Congress and the boycott of British goods was the main channel through which the commercial community worked in Bombay and in other important centres. An attempt was also made to stop the

export of cotton by holding up the cotton market. However, by persuasion combined with coercion, the Bombay Government was able to overcome these activities after a few months.

One side effect of the movement for the boycott of British goods was the riot between Hindus and Muslims in the city of Bombay. It appears that the Muslim community was against the boycott movement and in the attempt to assert its liberty to purchase whatever goods it wanted it came into conflict with the Hindu section of the commercial public. Words led to blows and quarrels led to a riot which lasted nearly two months levying a heavy toll of nearly 400 killed and several thousands wounded.

Thus from very early in the year 1932 the country was in the grip of the civil disobedience movement and the measures which the Government adopted to suppress it. After the Government had put about 75,000 persons in jail all over the country the movement as stated before began to wane and by the end of the year it had nearly disappeared.

About this time politically minded sections in the country began to take up the question of the release of Mr. Gandhi and his fellow prisoners. Public institutions and leaders of different non-Congress political parties pressed upon the Government the desirability of adopting a policy of reconciliation so that a suitable atmosphere might be created for a favourable reception to the new constitutional reform outlined in the White Paper issued early in 1933. The question was raised in the Legislature of the country and debates were initiated, but the Government maintained a firm attitude on this question.

The Government argued that unless Mr. Gandhi and his associates gave a guarantee that the movement would not be started in the near future the authorities could not take the risk of releasing them. The Congress leaders on the other hand it seems though inwardly convinced of the futility of their efforts would not make a humiliating concession of their failure by giving such a guarantee publicly.

In the latter half of 1932 His Majesty's Government published what is known as the Communal Award laying down what it considered to be an equitable settlement of the mutual claims of the different religious sections in the country as regards seats in the legislatures and the proportion in which they should be divided among them. This award was necessitated by the failure of the representatives of different communities to arrive at a common settlement during the first two sessions of the Round Table Conference. In the course of the second R.T.O. the minorities, consisting of the Muslims, the depressed classes and the Anglo Indians, arrived at a mutual settlement known as the Minorities Pact which they claimed had the support of 46 per cent of the population of India.

When the Award was published it was strongly resented by the Hindu community and by the extreme section of the Muslim community which did not get everything that was claimed for the community. In the Punjab and Bengal, especially, it led to a strong agitation on the part of the Hindus.

A section of public men led by Pandit Malaviya on the one hand and Maulana Shaikat Ali on the other decided to make one more attempt to arrive at a mutual settlement in order to replace the Award as provided in the Award itself. They held what is known as the Unity Conference in Allahabad. For several weeks leaders of different communities met together and tried to hammer out a solution acceptable to all but in the end the whole thing collapsed owing to their failure to solve the Bengal problem. Maulana Shaikat Ali left for America and returned only recently. At the time of writing it is hoped that he with others, will take up the threads where they were left at Allahabad.

Similarly there was great dissatisfaction among the Hindu community about the separate electorates on which basic provision had been made in the Communal Award for the representation of the depressed classes. The Hindus claimed that the depressed classes being but a section of the Hindu community should not be permanently separated from the bulk of the Hindu community. Mr. Gandhi from his prison cell made it a question of conscience and suddenly declared a fast unto death unless the Communal Award was amended in respect of the representation of the depressed classes by means of separate electorates.

This sudden declaration led to a commotion in the country and several leaders gathered together in a Poona session with the help of Dr. Ambedkar and Rao Bahadur Raja, representing the two rival groups of the depressed classes and the help of representative Hindus like Pandit Malaviya arrived at a formula known as the Poona Pact which was a modification of that portion of the Communal Award which dealt with the representation of the depressed classes. As the crisis in Mr. Gandhi's life was approaching, owing to prolonged fast, the Prime Minister and the British Cabinet lost no time in effecting a modification of the Award as desired by the signatories to the Poona Pact.

It may be mentioned here that the Poona Pact substituted joint electorates with the Hindu community for separate electorates for the depressed classes. In order to ensure that the representatives of the depressed classes carried the confidence of their community with them a device for a primary election by the community itself was evolved. The electorates of the joint Hindu community has to make its choice from among the panel of four candidates for each seat selected by the voters on the list of depressed classes.

An incidental effect of this fast of Mr. Gandhi was that it served to bring him once more into the limelight after months of obscurity. As during the past two or three years the Congress stood for Mr. Gandhi and *vice versa* and as the Government had successfully suppressed the Congress movement, Mr. Gandhi's name and personality receded into the background at least temporarily. This oblivion into which Mr. Gandhi had been forcibly thrust was shattered by the fast unto death, and he became once more the dynamic influence of the previous year. It is true that his activities were confined to the uplift of the depressed classes, but the

contact that he was thereby enabled to establish with the outer world served to hasten his sympathisers. During the fast he was given the option of leaving the jail and choosing his own residence provided he undertook not to take any part in the civil disobedience movement, but Mr. Gandhi did not avail himself of this conditional offer of freedom and continued to remain in jail.

Even after he broke his fast he was permitted to continue his activities for the amelioration of the condition of the depressed classes and to work for the abolition of untouchability from within his prison cell. His agitation for a change in the age long social law among Hindus provoked a counter-agitation on the part of orthodox Hindus who went to the length of suggesting that even if it meant Mr. Gandhi's death they would not surrender an inch. The outburst of social reformist enthusiasm engendered by the fast unto death gradually waned and in certain respects even a set-back ensued. Untouchables' claim for equality with caste Hindus in the matter of entry into temples led to clashes. These circumstances induced Mr. Gandhi to undertake an unconditional fast for twenty-one days. Thus once again Congress leaders and sympathisers have the satisfaction of seeing the author of non-co-operation in the public eye, though in a non-political sphere.

Indian Princes.—During the past two or three years the Indian Princes have figured largely in discussions on the future constitutional machinery of British India. They became actively interested in British Indian Reforms with the announcement made by representative Princes at the First Round Table Conference that they would join an All India Federation provided there were adequate safeguards for them. His enthusiasm, however, waned in 1931 when some prominent Princes began to entertain doubts about the advisability of their joining the Federation. The Congress resolution which set its goal as the establishment of a socialist state and the subsequent pronouncements of Congress leaders including Mr. Gandhi on their intentions if they gained power made the Princes pause before they plunged. The Maharaja of Patiala was the first to come into the open to warn his brother Princes against the dangers to their very existence involved in the Federal Structure Committee's plan. He declared that smaller States were bound to suffer the fate of the smaller German principalities under the Constitution of 1815 and disappear from the map of India. He suggested the advisability of a Union of Indian States directly in relationship with the Crown. He was later followed by other Princes who shared his fears and the view gained in strength that unless adequate guarantees were given for the continued maintenance of their rights and privileges they should not give their consent to join the proposed Federation.

When the Maharaja of Ilkhaner accepted the idea on behalf of his brother Princes, at the first Round Table Conference, to join the All India Federation no details of the scheme for the entry of the Princes were discussed. When the question was later gone into at the Federal Structure Sub-Committee of the E.L.C. it became evident that the Princes had a number

of mental reservations and conditions precedent to their entry. On their return to India they had mutual consultations and the Maharaja of Patiala became the sponsor of a modified plan of federation namely that instead of each Ruler entering the Federation singly on his own terms the matter should be discussed by the Chamber of Princes and the terms for their entry should be so settled that the Princes as a body should form one group of their own and join the federation only for certain specific purposes and to the extent that they consented to do so.

This gave a new aspect to the whole question. For some time there was difference of opinion between one section of Princes led by the Maharaja of Bikaner and another led by the Maharaja of Patiala.

Later on they arrived at a settlement between themselves and a common plan was evolved which now holds the field. Under this plan the Princes were to settle the terms of entry of all of them. It was also proposed that unless a proportion of over fifty per cent of the States joined no State should join singly. As regards their representation in the two federal Chambers it was found that however widely the legislatures were enlarged seats could not be provided for each one of the 600 odd Indian States. Out of these 600 more than half are what may be called small or minor States. And the larger States like Hyderabad, Mysore and Baroda

naturally objected to be placed on the same level as the smaller States which are no more than mere principalities. Then an attempt was made to give representation to the smaller States on the group system. At the last meeting of the Chamber of Princes held in Delhi in March 1933 the Princes made a serious attempt to bring about a settlement of this question and the Government has now declared that, in the event of the States not arriving at an agreed settlement it would have to give an award in the matter of the allocation of seats in the two Chambers. At the time of writing the question is still pending.

The main anxiety of the States in joining the federation is that their integrity and their rights under treaties should not in any way be affected except to the extent that they voluntarily agree to accede in what are called treaties of accession. They fear that once they enter democratic chambers they will not be able to hold on against the onslaught of democracy and by a process of wearing down they will soon be reduced to the position of mere principalities. It was with this object that the late Jam Sahib of Nawanshar who was the Chancellor of the Chamber of Princes last year, proposed several safeguards for guaranteeing the position of the States against the danger foreshadowed above. The States have now reduced their safeguards into specific proposals to be dealt with by the Joint Parliamentary Committee.

The National Liberal Federation.

The definite breach between the moderate and extremist elements in the Congress at its special session in Bombay in August 1918 (vide 1919 edition of this book) witnessed the birth of the National Liberal Federation which has since then been the platform of Indian moderate leaders. It held its first session in Bombay in 1918 Sir Surendranath Banerjee presiding. The Federation adopted for its creed the old Congress formula which was set aside by the Nagpur Congress.

Those who had held the Federation in high esteem for its moderation, sobriety and balanced judgment suffered a rude shock in 1927 when the Liberal body and its leading lights proved the saying, 'If you scratch a Liberal you will find an extremist.' Liberal leaders bade good bye to their avowed principle of co-operation with the Government when they expressed themselves in favour of a boycott of the Royal Commission on Indian Reforms on the ground that there was no Indian on it.

Thenceforward Liberal politics became negative and barren, and leaders who had enjoyed a reputation for sane thinking came to be regarded as the "wild men" of the Congress. Boycott was the breath of their nostrils, although

they were declaring now and then that the door was still open for Government to 'make a gesture of co-operation.' Their monotonous stagnation was, however slightly relieved by the efforts at constitution making undertaken at the instance of the Congress. Liberals heartily co-operated in this endeavour and attended the All Parties Conference summoned by the Congress in the middle of the year. Sir Tej Bahadur Sapru, President of the Liberal Federation, consented to serve on the Committee appointed by the Conference to draft a constitution for India. After months of toil the Committee produced a constitution according to which India would enjoy the status of the Dominions of the British Empire. The report also offered a solution for the communal divisions and a formula to govern the relations between British India and the Indian States. It was in a sense a Liberal document for the Liberals were the only group of men in the country who unanimously and unreservedly accepted the entire report.

The plea for the grant of Dominion Status was very strongly urged by Sir Chimanlal Betsalvad, President of the 1928 Session of the Liberal Federation who said that the trusteeship of

England was coming, to an end. British had to deal with a people who had attained majority and were demanding, from the so-called trustees their property and also asking for accounts. The British must change their mentality and must realise the feeling that was growing in the country which if not guided properly would swallow everything. This firm attitude on the part of the Liberals whom Government were not slow to recognise as their allies served to hasten the advent of a new era. The changing political situation was exhaustively reviewed at personal interviews between the British Cabinet and the India Office and Lord Irwin who had gone home on four months' leave. As a result of these conversations the Viceroy made soon after his return from leave what is now famous as the Proclamation of October 31, 1929. (For details see Congress section.)

By the time the Liberals foregathered at Madras, things had moved pretty rapidly in Congress circles. Congress talk of severance of British connection led Liberals to break away from the extremists. Once again the Liberals expressed disapproval of Congress methods. Sir Phiroze Sethna who presided denounced the movement which aimed at the severance of India's connection with the Empire and opposed the campaign of civil disobedience.

The Liberal Party's leaders had a busy time of it throughout the year 1930. They had on the one hand to set their faces against the civil disobedience movement conducted by the Congress and on the other to prepare a strong case for Indian Reforms such as would withstand the attack of diehards in Britain.

Among the British Indian Delegation to the Round Table Conference the Liberal Party had a large representation consisting of twelve members out of 57. These members played a very important part on the various committees of the Conference in London. Two among them, namely, Sir Tej Bahadur Sapru and the Rt Hon V. S. Sastri were mainly responsible for guiding and directing the proposals of the Indian Delegation which ultimately formed the basis of agreement at the Conference. On the communal question also the Liberal Delegation strove hard to conciliate the claims of the different minorities and all but succeeded in solving that difficult problem.

The annual session of the Liberal Federation during Christmas had to be postponed owing to the absence of many of its leaders in London and owing to the fact that the discussions at the Round Table Conference had not concluded by then.

The session met in July 1931 under the presidency of Mr O. Y. Chittamani and several resolutions embodying the Liberals considered views on various aspects of the proposed constitutional reforms were adopted. The President delivered a lengthy but powerful speech in which he strongly criticised the recommendations of the various committees of the Round Table Conference, 'Federation or no federation?' he declared, "we must have responsible government, not less at the centre than in the provinces, and we must have it without

any more delay. He voiced dissatisfaction with the findings of the Defence Sub-Committee of the Round Table Conference and opposed the provision of safeguards in the realm of finance commerce etc as recommended by the respective Committees.

The principal resolutions passed by the Federation demanded that the Federal Executive should be made responsible to the popular Chamber of the Legislature, the residuary powers must be vested with the Central Government, a definite scheme for the Indianisation of the Defence Forces including officers and men within a specified time should be immediately propounded and provision of facilities for the training of Indians for service in all arms of defence so as to complete the process within a specified period should be in charge of a Minister responsible to the Legislature, the future Government of India must have complete freedom to adopt measures for the promotion of basic trades and industries, no special powers must be given to the Governor General and the Governors except in extreme cases of emergency, separate electorates should be done away with and there should be joint electorates with reservation of seats for minorities, there should be no statutory fixation of a majority and the position of all important minorities should be equitably considered in the determination of weightage.

This firm attitude was further stiffened when details of the Round Table Conference scheme began to be worked out both in England and in India in the latter half of 1931.

Early in the year 1932 the personnel of the three committees (envisaged by the second R.T.C.) was announced. The Indian States Committee presided over by the Rt Hon J. C. Davidson dealt with the Indian States only and considered the problems arising out of the federation of the Indian States with British India. Similarly the L.C.S. Committee considered itself with the financial aspects arising out of the All India federation from the Indian point of view. Neither of these committees included any Indian public men from British India. The most important of the three committees was the Franchise Committee presided over by Lord Lothian. It contained a good number of Indians. The recommendations of the Franchise Committee were practically endorsed by the third R.T.C. But the White Paper containing the proposals of His Majesty's Government for the constitutional reform of India has gone back on these recommendations in important particulars.

While the committees were drafting their reports Sir Samuel Hoare the Secretary of State for India took up the question of constituting the third Round Table Conference. In doing so the British Cabinet at first adopted a plan and procedure radically different from that of the two previous Conferences. The proceedings were to be in camera, the agenda was to be fixed, the number of delegates was considerably cut down, in short the conference method according to political opinion in India, was materially whittled down.

This led to angry protests from the progressive Indian section of the R.T.C. They held meetings and leading members like Sir T. B. Sapru threatened non-co-operation. The Council of the Liberal Party met simultaneously and announced the conditions on which it would co-operate with the Cabinet in the matter of the R.T.C. and called upon the Government to make a public announcement accepting these conditions.

In response to these protests and appeals a slightly more liberal scheme was announced. The Liberal Party complained that the Cabinet had paid no heed to the conditions published by it and the party as such refused to co-operate with the R.T.C. Sir T. B. Sapru and the progressive section which worked with him, however, accepted the modified plan and consented to work in the third R.T.C.

The third R.T.C. met in London about the middle of November and worked at high pressure for nearly a month. Special committees were appointed on two or three important questions. Owing to the shortness of time the whole work was expedited and the session closed just before Christmas with a pronouncement by the Secretary of State on behalf of the Cabinet. In this statement Sir Samuel Hoare foreshadowed the main lines of advance towards the fulfilment of the objective as settled at the first R.T.C.

When the results of the third R.T.C. were known in India they led to protests on the part of the Liberals and other politically minded sections. A manifesto signed by about one hundred leading and influential public men was issued pointing out many defects in the scheme of the Secretary of State. Meetings were organised by a combination of advanced political parties in prominent towns like Bombay, Calcutta, Lahore, Poona, Allahabad and Lucknow for protesting against the proposals of the Secretary of State.

When the White Paper embodying the proposals of His Majesty's Government were actually issued the Liberals began to complain even more bitterly and affirmed that the White Paper proposals were to some extent even more retrograde than the announcement at the Round Table Conference. Even communal parties were not satisfied with it.

The main point of criticism was that the White Paper was based on entire mistrust of the capacity of Indians to bear the burden of responsible government. Consequently, it was argued, it was overweighed with so many checks and safeguards that, in their desire to keep the control of affairs in the hands of Parliament and the Secretary of State by means of the special

powers of the Governor General and the Governor, no real responsibility was almost blotted out both in the federal centre and the provinces. Similarly some Liberal leaders contended the reservations in the Central Government in respect of defence, foreign relations, etc. and important deductions from the control of the legislatures, had placed a bar sinister against the evolution towards Dominion Status. As regards finance nearly eighty per cent of the budget was earmarked so that the financial responsibility of the legislature was circumscribed to one-fifth portion of the budget. 'Questions like tariffs, currency exchange and the development of indigenous trade and commerce' some complained, will practically be controlled from Whitehall through the agency of the Governor General in the exercise of his special powers. The scheme does not lay down any time limit for bringing to an end the period of transition, nor does it provide any constitutional powers for the democratic growth of the constitution with out reference to Parliament.

According to the plan of the British Cabinet, the White Paper was submitted to the two Houses of Parliament for a general debate resulting in the appointment of a Joint Select Committee to report to Parliament on the proposals of the Government. Certain selected Indians were associated with this committee in the matter of examination of the various questions but not in the drafting of the report to Parliament.

Owing to the absence of representatives of the Liberal Party as such in the third R.T.C. the party had no voice in the proceedings of that Conference. When the results of the Conference were known in India the Liberal Party took up the cudgels and besides drawing up a condensed manifesto signed by one hundred leading politicians the Party organised public meetings at various centres.

Similarly when the White Paper was published the Party issued another manifesto and later called a session of the Liberal Federation at Calcutta during the Easter of 1935. Dewan Bahadur Ramachandra Rao, a member of the first two R.T.Cs, presided. Leading Liberals like the Rt. Hon. V. S. Sastri took prominent part in the deliberations. The Federation, after two days' full discussion in committee passed a comprehensive resolution pointing out what in its opinion are defects in the White Paper scheme and suggesting modifications therein so as to render it acceptable to moderate sections in the country. The Liberal Party as such is not represented in the body of Indians chosen to be associated with the Joint Select Committee, nor will the Party as such send any witnesses to give evidence before the Joint Committee.

The Moslem League.

The All India Moslem League came into being in 1906 out of the universal desire among leading Mussalmans at that time for an effective organisation to protect their communal interests. With a view to secure separate Muslim representation in the legislative bodies of the land under the Minto Morley scheme of constitutional reforms then under discussion Indian Moslems who had been hitherto keeping aloof from politics organised the League. Its original objects were the promotion of loyalty to British Government, the protection of political and other rights of Mussalmans and to place their needs and aspirations before Government in temperate language and to promote inter communal unity without prejudice to the other objects of the League. Muslim opinion slowly advanced and in 1918 the securing of self government within the British Empire was included in the objects. The League was a powerful and influential body in 1916 and 1917, and what is known as the Lucknow pact of communal representation arrived at between the League and the Congress in 1916 was bodily incorporated in the Government of India Act 1919. The birth of the Khilafat Committee however overshadowed the League which from 1919 had almost disappeared till April 1923 when it met for a brief period under the presidency of the late Mr Bhargava but had to be adjourned for want of a quorum. In 1924 however, some influential Moslem leaders like Mr M. A. Jinnah thought that the Khilafat Committee's functions having ceased in view of the Turkish deposition of the Khalifa decided to revive the League which met under Mr Jinnah's chairmanship at Lahore in May 1924. The Lahore session practically did nothing else save to reorganise the scattered branches of the League. The reconstructed League commanded comparatively less influence. And what little authority it exercised disappeared with the formation in 1928 of the All Parties Muslim Conference. This latter body was representative of the Muslim masses as well as classes in the sense that the Muslim League was not.

The League in 1923-29.—The 1926 and 1928 sessions of the League were noted for their virility. The Muslims displayed greater allegiance to their communal organisation in proportion to the loyalty of the Hindus to their Mahatma. Suspicion and distrust, enmity and open hostility began to prevail between the two communities. Proportionate distribution of the leaves and fishes of office, on the political side, and the questions of the Hindus playing music before mosques and the Mahomedans killing cows, on the religious side, constituted the points of difference which frequently led to inter communal riots. The situation was regarded with grave concern by serious minded leaders, some of whom under the leadership of Mr Jinnah, met at Delhi early in 1927 and offered, in the name of the Muslims, to surrender their right to communal electorates, provided, among other things, Hind was constituted into a separate province and reforms were introduced in the N. W. Frontier Provinces and Baluchistan. This offer, however, was acceptable neither to

the Hindus nor the Muslim masses who insisted on the continuance of the separate electorates. A schism set in the Muslim League which was accentuated by the announcement of the personnel of the Statutory Commission on Indian Reforms. The non inclusion of Indians on the Commission was construed by a certain section of the Muslims as an insult to India, and those who held this view decided to boycott the Commission. The majority of the community, however, thought otherwise. The gulf between the two sections widened during 1928. 1929 Session served to strengthen the new organisation, the All Parties Muslim Conference. Refusing to walk into Mr Jinnah's parlour the supporters of the All Parties Muslim Conference were angrier in their constructive work. They were joined by the members of the Shafi section of the League who had come to Delhi in the hope of making up their differences with the Jinnah group but who were sadly disillusioned.

The All Parties Muslim Conference.—The publication of the Nehru Report hastened the advent of the All-Parties Muslim Conference. The Conference was called in 1928 to counteract the effect of the Nehru Report and to formulate the Muslim community's demand in regard to the future constitution of India. Notwithstanding the refusal of the Jinnah Leaguers to participate in the proceedings, the Conference was attended by almost all the prominent Muslim leaders of the country, including a very large number of the members of the Councils and the Assembly. There was ready agreement on the unsuitability of the Nehru Report, but difference of opinion prevailed with regard to the goal of India. Persons like Mr Mahomed Ali stood for complete independence and, of course, for the boycott of the Commission, while Sir Mahomed Shafi, who had a very large following favoured co-operation with the Commission in the framing of a constitution within the Empire. Things wore a gloomy aspect for a while, but thanks mainly to the tact of the President, the Aga Khan, a compromise was reached whereby the mention either of Dominion status or 'Independence' was omitted from the resolution put before the Conference which demanded merely a federal constitution. Similarly it referred neither to the Simon Commission nor to the Nehru Report, but insisted on compliance with the demands of the Conference by any agency which devised a constitution.

Muslim Activities in 1931-32.—Unlike the Congress, the Muslim political organisations used to be known for their lethargy except during the week when their annual meetings are held. During the past three or four years however, they displayed unusual activity. This is no doubt due to the summoning of the Round Table Conference to settle the basis of India's future constitution. Unattracted by the negative but spectacular programme of the Congress, the majority of the Muslims appreciated the danger of allowing their case to go by default at the momentous London Conference and took a lively interest in its work before and during its proceed-

ings Repeated attempts were made throughout 1930, particularly during the latter half, to bring Indian Muslim leaders together for ventilating the community's demands. The credit for this useful activity goes to the All India Muslim Conference, the Muslim League remaining practically inert. In July the Executive Board of the All Parties Muslim Conference met at Simla and formulated the community's demands. The Simon Report was examined and rejected, but the Round Table Conference was welcomed. Those Muslims who had formerly shouted the slogan 'Swaraaj if possible with British connection and without it if necessary' found in the Round Table Conference offer the British hand of friendship. Shortly after the opening of the Round Table Conference, the All Parties Muslim Conference met at Lucknow and reiterated what have come to be known as Mr. Jinnah's Fourteen Points which demand a series of provisions calculated to protect the community against possible Hindu aggression. The more important of the Fourteen Points are: federal constitution with residuary powers vested in the provinces, uniform provincial autonomy, effective representation for minorities in all provincial legislatures, one-third representation for Muslims in the Central Legislature, guarantee against a disturbance of the Muslim majority in the Punjab, Bengal, the N.W. Frontier Province, full religious liberty, no prejudicial communal legislation except under certain conditions, share for Muslims in the cabinet and the services reforms for the N.W.F.P. and Baluchistan, separation of Sind, protection of Muslim culture and insistence on separate electorates unless the above points are conceded. The Hindus seemed in no mood to concede their demands. The Congress persisted in its civil disobedience campaign, paying little heed to the Muslim desire to settle the communal problem before fighting the Government. The Hindu delegates in London did not allay Muslim fears—these factors produced among the Muslims a frame of mind which found expression in the presidential address delivered by Sir Muhammad Iqbal at Allahabad towards the tag end of the year. Typifying the prevalent Muslim exasperation, Sir Muhammad demanded the formation of a Muslim State in the North West, comprising Sind, the Punjab and the N.W. Frontier Province, within the State of India. Such a state would afford a permanent solution of the communal problem, he said, and averred that the cultural development of the community demanded it. The session of the League made a firm declaration that no constitution devised for the future of India would be acceptable to the Muslims unless their rights were adequately safeguarded.

Unlike previous years, a determined effort was made in 1931 to effect a Congress-Muslim agreement. Similar efforts had, of course, been made in the past but they were only of academic interest. This year communal agreement became a necessity in view of the important deliberations in London concerning the future constitution of India. The ratification of the Delhi Pact by the Congress and its resolve to participate in the London Conference brought the communal issue to the forefront. The first Round Table Conference had ended with an assurance by the Premier that no legislation would be undertaken without satisfaction being

afforded to the minorities. And if the Congress wished to have its scheme accepted by the Conference it was up to it to carry the Muslims with it. Faced with the task of making constructive proposals the Congress seriously set about making provisions satisfactory to the Muslims and other minorities.

The leaders of the community, who had not much faith in promises made by the Hindu-ridden Congress, refused to be satisfied with anything less than statutory guarantees for the protection of their rights and privileges. Their suspicions were increased by the manner in which a few members of their community stilled themselves as Nationalist Muslims, were playing into the hands of the Congress leaders. The task of carrying on negotiations was thus rendered more complex. A series of conversations was held in the summer between Mr. Gandhi the Muslim leaders and the Nationalist Muslims, but no useful scheme emerged.

The Muslim leaders on the other hand strove to consolidate the position of the community and to present a united front at the Round Table Conference. A special session of the All-India Muslim Conference reiterated the Muslims' Fourteen Points and passed some outspoken resolutions. One of these expressed the opinion that the so-called non-violence of the Satyagrahis, consisting in many cases of students of colleges and schools in a mere sham, little short of an unclean political stratagem adopted in the face of the superior organised forces of the State and cast off in dealings between the communities. The resolution affirmed that the continuance of the majority community in its present state of mind would produce civil war. It accused the British authorities of spineless handling of the position and warned them that their pendering to the Congress would ruin the country. Mr. Shaikat Ali in his presidential address to the Conference appealed to the Hindus to accept the Muslim demands. A good deal, he said, depended on the good sense, reasonableness and wisdom of the Hindu community. Let India accept the hand of peace offered by Britain in the same way as Muslims will grasp the hand of Hindus if the latter show a change of heart, he concluded.

The Conference was so strong on the question of guarantees for the continued enjoyment of their rights that a proposal was seriously discussed that if their demands were not conceded the Muslim delegates should refuse to co-operate with the Round Table Conference and oppose Dominion Status or responsibility at the centre. The discussion however was adjourned sine die.

As time passed on it became increasingly evident to the Muslim leaders that Mr. Gandhi was trying to play off the Nationalist Muslims against the whole community and Mr. Shaikat Ali gave a stern and timely warning to Mr. Gandhi and the Congress. 'Mr. Gandhi is a danger in Indian politics. I am afraid he wants not only Hindus and Muslims to quarrel but desires Muslims and Muslims to cut one another's throats. Muslims could never be expected to give up separate electorates. If Mr. Gandhi started any campaign against Muslims, I would through the assistance of a handful of Muslim supporters, he would be the cause of serious trouble in the country. Later Mr. Shaikat Ali asked Mr. Gandhi to "leave the Muslims alone."

Shortly after the All India Conference had held its special session the Nationalist Muslims met in conference and passed a resolution which favoured the introduction of a federal constitution reserving powers vesting in the federating units. Representation in the Legislatures was to be on the basis of (a) universal adult franchise (b) joint electorates (c) reservation of seats in the Federal and Provincial Legislatures on a population basis for minorities less than 30 per cent with the right to contest additional seats. The resolution added that Nationalist Muslims were prepared to negotiate for a settlement of the outstanding questions on the basis of joint electorates and adult franchise.

In pursuance of this offer negotiations were opened between the two wings of the Muslim community but it came to nothing.

Muslim activities in 1932-33—The failure of this move for unity among Muslims themselves had its repercussions. In the first place Mr. Gandhi made much of the Hindu atmosphere which was said to have been responsible for the lack of unity among Muslims and for the stifling of progressive opinion in the community. This attitude of the Congress leader in its turn served to open the eyes of the Muslims to the insincerity of the promises made by the Congress and Hindus. It stiffened the backs of such of the Muslims who were otherwise inclined to give and take.

The latter half of 1932 and the early months of 1933 were marked by countless attempts not only to consolidate the ranks of the Muslims but also as between the Muslims and the other communities. Real activity started only with the publication of the Communal Award. The Council of the All India Muslim League met in September and resolved that although the Award fell short of the minimum demands of the Muslims it represented a method which removed a great obstacle from the path of constitutional advance. This represented the bulk of Muslim opinion on the Award, although Nationalist Muslims and the conciliatory section of Muslim opinion thought it would be advisable to evolve a compromise scheme satisfactory to other communities also which might replace the Award. In that particular even as Mr. Gandhi's feet had led to the conclusion of the Poona Pact in replacement of the Award in so far as it affected the depressed classes.

The unity move took various shapes and engaged the attention of numerous conferences. Paradoxically enough it led to unity and discord at the same time. While it brought together those Muslims who wished to consolidate what they had achieved for the community in recent years by securing for it the seal of approval of the other communities and carry these latter with them through the remainder of the constitutional discussions, it alienated the leftist Muslims who would be party to no compromise with Hindus and others who they argued had denied them their due until the British Government

came to their rescue. The latter section was led by Sir M. Iqbal, Dr. S. Ahmed, Moulvie Sahif Dawoodi and others.

The first of these important conversations were held in Lucknow in October when Muslims of almost all shades of opinion except the Iqbal school accepted thirteen of the famous Fourteen Points. As for the 14th namely the nature of the electorates, the leaders gathered agreed to start negotiations on the basis of what is known as the Mahomed Ali Formula which makes it obligatory upon a successful candidate to the councils to secure ten per cent votes of the other communities and 40 per cent minimum of the recorded votes of his own community. For this method it was claimed that it was better than either joint or separate electorates as it would enable the right type of Hindu and Muslim to be returned.

This was definitely opposed by the Muslim Conference group led by Sir M. Iqbal while the Council of the Muslim League adopted a non-committal attitude. It was ready to consider better alternatives to the Communal Award only if the alternatives improved the position of the Muslims and enabled them to have a more effective voice in the affairs of the country.

Then followed what were called Unity Conferences in November and December—the latter to ratify the conclusions reached at the former. In connection with both of these progressive Muslims including Maulana Maududi A.H. but excluding the Iqbal group held their own communal meetings and drew up a formula embodying the maximum they were prepared to concede for the sake of unity and peace and their formula was later discussed at the regular Unity Conference. The two sessions of the Unity Conference dragged on for a number of days and after numerous deadlocks reached an understanding on most of the points in dispute such as Sind, Baluchistan, Punjab residuary powers, etc. But when the efforts had all but succeeded the conversations ended abruptly owing to the uncompromising attitude adopted by the Bengal Hindus who refused to yield even an inch.

Meanwhile the leaders of the All India Muslim Conference, the Muslim League and the Jamiat ul Ulama, Calcutta met and heard a joint statement condemning such measure of unity as was achieved mainly on the ground that large sections of Muslim opinion including themselves were not represented at the conversations.

Thus after months of negotiations the position was as it had been before the publication of the Communal Award. Indeed it became slightly worse to the extent that it definitely isolated the Iqbal group and the Punjab Muslims. This unfortunate development found expression in the way in which a provisional settlement arrived at on the Punjab communal question with the aid of Sir Fazl-i-Ru-saini was rejected by the Punjab Muslims in the first few months of 1933.

The Khilafat Committee.

The origin of the Central Khilafat Committee is to be found in the closing days of the Great War when Turkey was feeling the consequences of defeat at the hands of the Allies. Muslims in India naturally sympathised with their co-religionists in Turkey and carried on ceaseless agitation against the division of Turkey into small bits among the Allies. Being anxious for the safety of the holy places of Islam and opposed to the dismemberment of Turkey, they felt a considerable amount of bitterness against the British, who as the principal Allied Power were dictating their own terms to vanquished Turkey. Formed thus for the protection of the Khilafat as a temporal as well as a religious Power, the Central Khilafat Committee was exploited to good purpose by the leaders of the Congress movement in India which had found in the Punjab Wrongs an effective means of propaganda against the British rule in India. Communion of ill feeling towards the British brought the two closer. While it gave impetus to the Congress by securing for the Congress support from the Muslims, it also received support from the Congress in agitating for the 'righting of the Khilafat wrongs'. Thus the two worked side by side, mutually helpful.

Madras Khilafat Conference under the chairmanship of Mr. Shaukat Ali unfolded a programme of progressive non-co-operation and appealed to the country for support. The Khilafat Committee, with the huge funds at its disposal, was able to draft in a large number of delegates to the Calcutta special Congress in 1920 when the non-co-operation programme was accepted by that body with two more objects added to it, namely the obtaining of Swaraj and the righting of the Punjab wrongs.

With the deposition of the Khilafat by the Kemalists and the revival of the Moslem League, the Committee's activities have been considerably restricted. Recently the Committee sent a deputation to Nefz to intervene and settle the dispute between the warring elements. Though the Government of India were willing to permit a deputation of the Committee to Turkey, the Turkish Government did not quite like the idea which had consequently to be abandoned.

The 1925 session of the Khilafat Conference was rendered lively by Mr. Hasrat Mohani whose speech strongly criticising Sultan Ibn Saud was subsequently expurgated. The resolution adopted by the conference under the presidency of Mr. Abul Kalam Azad condemned the British policy in Iraq and the League's decision on Mosul and declared that if the Turks went to war on the latter issue the Conference would deem it its duty to help them.

For some years since, then one heard little about the public activities of this Committee, although many of its domestic quarrels engaged the attention of the public. Funds, however, continued to be collected for the 'activities' of the Committee which could hardly be specified. Things

dragged on until the latter half of 1927, when the leaders found the Khilafat organisation a useful tool for purposes of their propaganda for boycotting the Statutory Commission on Indian Reforms. This was successfully achieved by the extremist wire-pullers at Madras in 1927.

In the next year, however, a peculiar situation arose as the result of the publication of the Nehru Report. This document raised many controversial issues. Its two main recommendations, namely, Dominion Status for India and joint electorates with temporary reservation of seats, were not acceptable to the Khilafatists whose ideal was an extreme type of nationalism coupled with rank communalism. They wanted complete independence for India but insisted on the continuance of separate electorates. This state of mind found expression at the annual session of the Khilafat Conference which met in 1928 at Calcutta.

In the years following the publication of the Nehru Report, the Khilafat Committee re-appeared on the Indian political stage and vigorously strove to repudiate that document. This it succeeded in doing, as the Muslims with one voice condemned it as pro-Hindu. As months passed by, it became increasingly clear to the Muslims that the Congress was getting more and more Hindu ridden and that they could not expect due protection for their communal rights from the Congress or its leaders. The appreciation of this situation by the Muslim masses was mainly due to the activities of the Khilafat Committee and its leaders. Thus when the Khilafat Conference met in Lahore in 1929 it was resolved that the Khilafatists should participate in the Round Table Conference convened by the British Government to settle the future constitution of India, although in the same breath the Conference declared itself in favour of independence. This latter, however, was but a worthy sop to the extremists, as the main body of Khilafat workers started in 1929 and continued since then a regular fight against the Congress.

In the past two or three years in addition to the effective prevention of the Muslims from joining the Congress as unless the communal question was satisfactorily settled the Khilafat Committee did a considerable work abroad. The All brothers who were the soul of the Khilafat movement worked for the Arab federation and the Tanzim of Muslims all over the world. During this time the movement lost Maulana Mahomed Ali, who passed away in London in the midst of his strenuous work for his country and his co-religionists, and the work of carrying on the increasing activities of the Khilafat Committee fell on the shoulders of his brother Maulana Shaukat Ali. The invitation to bury the departed leader in the mosque of Omar in Jerusalem brought the Indian Muslims closer to the Arabs. This fellow feeling among Muslims in different parts of the globe found expression in a huge conference held in Jerusalem which served to create a new spirit of internationalism among the followers of Islam—one of the cherished objects of the Indian Khilafatists.

As the representatives of Indian Muslims in the London Conference the All brothers effectively safeguarded their interests. In addition Maulana Shaukat Ali repeatedly impressed on British audiences and leaders the advisability of keeping the Indian Muslims contented as it would please Muslims in other parts of the world.

The history of the Khilafat movement followed a peculiar course on the North-Western Frontier Province of India. There the Khilafat organisation conducted a ceaseless agitation over the local grievances of the Muslim population and the disaffection towards the Government thus created was promptly exploited by the Congress for furthering its own lawless activities. Being sturdy people accustomed to fighting, they often found it impossible to observe the Congress creed of non violence. A number of clashes ensued, with attendant casualties.

The Khilafat Committee also did a lot of constructive work during the past two or three years. It inculcated a spirit of swadeshim among the Muslim masses, worked for their educational and social upliftment and organised an efficient volunteer corps for maintaining order at public meetings, processions, demonstrations, etc., and in restoring peace in areas where communal tension had prevailed. The volunteers did much useful work in Bombay, Calcutta, Bangalore and Delhi. The Committee approached the Government for the appointment of the Maj Inquiry Committee. It rendered great services to the pilgrims by

giving facilities for their journey, supplying them with information and literature concerning the holy places and attending to their comforts in countless other ways. A number of night schools were established in Rangoon, Delhi, Bombay and other places for the education of the adults of the community. The committee also organised a volunteer corps with 5,000 regulars. They made themselves useful in maintaining order at public meetings, processions, demonstrations etc., and also in restoring peace in areas where communal tension had prevailed.

The fourteenth session of the Khilafat Conference met at Ajmer in September 1932 under the presidency of Sheikh Abdul Majid. He condemned the caste system among Hindus which according to him was responsible for the demand of separate electorates by the depressed classes. As for separate electorates for Mussalmans he held there was no choice left to them except to ask for such a safeguard. He reiterated the fourteen points but was none the less in favour of a compromise if it was possible on honourable lines. He suggested the voluntary dissolution of all the existing political organisations of Mussalmans and the formation of one comprehensive body. At the open session of the conference a resolution was passed characterising the communal award as absolutely unsatisfactory in that only three out of the fourteen points had been conceded by it.

The Round Table Conference.

The first session of the Indian Round Table Conference, which was held in London during the autumn of 1930 and January 1931, was remarkable for the spirit of unity. At the first sitting Sir Tej Bahadur Sapru on behalf of the British Indian Delegates, extended an invitation to the Princes and States to consider entering an All Indian Federation which would establish a federal government and a federal executive embracing both the British Provinces and the Indian States in one whole associated for common purposes but each securing control of their own affairs, the Provinces autonomous, and the States sovereign and autonomous. This though it struck an unexpected note at the Conference, was no more than the fruition of an old idea. The authors of the Montagu-Chelmsford Report, which the foundations of the great Reform Act of 1919, visualised the steady progression of the federal idea, but the notable passage in which they indicated this purpose slipped into the background in the confused and difficult days that followed. Sir John Simon and his colleagues, who conducted the parliamentary inquiry into the working of this Act, declared their adhesion to the federal idea, and proposed as a contribution to it the establishment of a Council of Greater India in which the representatives of British India and the Indian States should sit for the discussion of matters of common concern. The Govern-

ment of India, in a lengthy despatch on the Simon Report also adhered to the federal principle though they expressed the view that it was a distant ideal. Many Indian publicists had declared the faith that without the adoption of the federal principle no substantial growth of the Indian constitution was practicable. But although federalism had always been in the background none had possessed sufficient courage to bring it into the forefront until Sir Tej Bahadur Sapru invited the Princes to consider it. The invitation was promptly accepted. His Highness the Maharaja of Bikaner speaking for the general body at once took up the gauntlet, and declared that subject to the incorporation in the statute of certain defined conditions—they were in substance the guaranteeing of the sovereignty and treaty rights of the States, and the protection of their essential interests the Princes and States would favourably consider any such proposal, later he avowed his belief that provided the completed picture was satisfactory seventy five per cent. of the States would join a federation.

Real Progress—By common consent, this patriotic offer by the Princes and States transformed the situation. The goal of the British-Indian publicist was the establishment of responsible government in India, with safeguards during the transitional period, and ultimate

Dominion status for that responsible government. With the assurance of the participation of the Princes and States bringing a powerful element of stability into the governing machine Lord Reading, speaking for the Liberals accepted the crucial proposition of a responsible government at the centre. Later the spokesmen for the Conservative Party took up the same position though perhaps in more cautious terms. On this guiding principle substantial progress was made in sketching the outline of a federal constitution. True the Minorities Question that is to say the adequate protection of the minorities in the Indian population especially the great Moslem community, remained unsettled and Moslem acceptance of responsibility at the centre was conditional on the solution of this very thorny issue. But the measure of progress was so satisfactory before the Conference separated in January 1931 that speaking for His Majesty's Government the Prime Minister Mr. Ramsay MacDonald, was in a position to make the following announcement:

'The view of His Majesty's Government is that responsibility for the Government of India should be placed upon Legislatures, Central and Provincial with such provisions as may be necessary to guarantee during a period of transition the observance of certain obligations and to meet other special circumstances and also with such guarantees as are required by minorities to protect their political liberties and rights.

'In such statutory safeguards as may be made for meeting the needs of the transitional period it will be a primary concern of His Majesty's Government to see that the reserved powers are so framed and exercised as not to prejudice the advance of India through the new constitution to full responsibility for her own Government.'

Participation of Congress—But representative as it was in all other respects the first session of the Congress embraced no representative of The Indian National Congress. For various reasons that stood aloof. During the interval between the rising of the first session and the convening of the second, negotiations were carried on with a view to the Congress suspending the Civil Disobedience Movement on which it had embarked and joining in the task of framing the new constitution. These discussions ended in what was called "The Gandhi Irwin Pact", which embodied a settlement covering the whole field in dispute, and in an undertaking on the part of the Congress to participate in The Round Table discussions and to suspend civil disobedience. After many hesitations Mr. Gandhi, who was appointed sole representative of the Congress, sailed for England and others who had remained aloof from the earlier proceedings joined the Delegation. At first Mr. Gandhi's contribution to the work of the Conference was helpful. Though he was perhaps more anxious to justify Congress and to maintain its right to speak for India, he accepted the principle of federation, and the task of making it easy for the Princes and States to enter therein. But afterwards his contribution was less helpful. Specially was this the case in relation to the Minorities.

The Communal Award

The decision of the British Government in regard to the representation of the various communities in British India in the Provincial Legislatures on which the communities themselves were unable to agree was published in August 1932. The award followed a thorough and comprehensive inquiry into the proportions and position of the various communities in the Provinces. The decision was not given on strictly mathematical lines, thus the Sikhs with 32 seats out of a total of 175 in the Punjab Legislature secured a larger representation than they would on a population basis. The table of distribution avoided the term Hindu. Its place was taken by the heading "General", but it was clear that those under that heading would be overwhelmingly if not entirely Hindu, for Muslims, Sikhs, Indian Christians (with some exceptions), Anglo-Indians and Europeans would vote in separate communal constituencies. The seats were distributed as follows: General 705, Depressed Classes, 61, Backward areas 20, Sikhs 35, Muslim 459, Indian Christians 21, Anglo Indians 12, Europeans 25, Commerce and Industry 54, Landholders 35, Universities 8 and Labour, 98.

With regard to the Depressed Classes, it was explained that they would vote in the general constituencies but in order to ensure adequate representation to them special seats were also allotted. It was contemplated that this arrangement, which gave the members of these classes two votes should be limited to 20 years. As to women voters His Majesty's Government came to the decision to limit the electorate for each special woman's seat to voters from one community.

Accompanying the award was an explanatory statement by the Prime Minister in the course of which he observed as follows:

'Our duty was plain. As the failure of the communities to agree amongst themselves had placed an almost insurmountable obstacle in the way of any constitutional development, it was incumbent upon the Government to take action in accordance therewith with the pledges that I gave on behalf of the Government at the Round Table Conference in response to the repeated appeals from representative Indians and in accordance with the statement approved by the British Parliament. The Government are to day publishing a scheme of representation in the provincial assemblies that they intend, in due course to lay before Parliament unless in the meanwhile the communities themselves agree upon a better plan.

We should be only too glad if at any stage before the proposed Bill becomes law the communities can reach an agreement amongst themselves. But guided by the past experience the Government are convinced that no further negotiations will be of any advantage and they can be no party to them. They will however be ready and willing to substitute for their scheme any scheme whether in respect of any one or more of the Governors' Provinces or in respect of the whole of British India that is generally agreed to and accepted by all the parties affected.

THE THIRD CONFERENCE

Following the publication of the communal award, the third session of the Round Table Conference was summoned in London. The Congress did not participate in it. Most of the leaders including Mr. Gandhi were in prison for reviving the civil disobedience movement. Profiting by past experience Government refused to consider the question of releasing them unless and until the lawless movement which they had initiated was unconditionally called off. The Conference was nevertheless attended by representatives of all other parties in India and lasted from 17th November 1932 to 24th December 1932. Its achievements were summed up by Sir Samuel Hoare, the Secretary of State for India, in his concluding speech at the final plenary session. He said

I would venture to sum up the results in two sentences. I would say first of all we have clearly delimited the field upon which the future constitution is going to be built. In a much more detailed manner than in the last two years we have delimited the spheres of activity of the various parts of the constitution. Secondly and I regard this result as much more important than even that important first result, we have I believe created an *esprit de corps* amongst all of us that is determined to see the building that is going to be reared upon the field that we marked out both complete in itself and completed at the earliest possible date. Lord Chancellor, I said that we had marked out the ground. Let me explain by a few examples what I mean by that assertion. I take the various parts of the constitutional structure in order.

I begin with the part that Indian India, the India of the States, is to play in the Federation. There we have made it quite clear that there is no risk in any respect to the Treaties or to the obligations into which they and we have entered. I hope that I have made it quite clear that all questions governed by that general term paramountcy do not enter into the Federal scheme at all. I think also I may say that we made some progress in the enquiry over which Lord Irwin presided one day this week into the methods by which the States will accede to the Federation.

Let me say in passing—for I think it may help our future discussions both here and in India—that we have always regarded an effective Federation as meaning the accession of a reasonable number of States and, as at present advised, we should regard something like not less than half the States seats and not less than half the population as the kind of definition that we have in mind.

Next I come to the Federation and the Units. Here again, I think we have made great progress in delimiting the field between the Centre on the one hand and the Provincial and States Units on the other. We have been very carefully through the lists of Federal and non-Federal activities and we have got much nearer to agreement than we have ever reached before.

It is now quite clear that there will be a definite delimitation of the activities of each of these three parts of the federal structure. To-day I need not go into detail for the Report of the Disputes and Powers Committee will show both to you and to the world outside the progress that we have made in that direction.

Next there is the very difficult question of Federal Finance, one of the most vital questions in the whole field of Federal activities. Unfortunately we were discussing that question at a time of great difficulty. We have been discussing it at a time when no Government in the world has sufficient money for its needs. But I think I can claim that there again we have made some substantial progress. I fully admit that there are differences still to be recognised and to be reconciled. I do not think it could be otherwise in any question of this kind but I should like to say to Lord Peel who, as far as the Conference is concerned is the father of Federal Finance—at present it is a rather difficult off spring but I think as it grows up it will become easier to manage—how much indebted we are both to him and his Committee for having made the progress that they have achieved. I think I can say that the work that they have done will very materially help the Government in coming to a decision in consultation with the Central Government and the Provincial Governments in India, at an early date.

Then, Lord Chancellor there are those difficult questions that we have always had with us in connection with the federal institutions: the questions about the size of the Chambers and about the allocation of seats. I say quite frankly that as regards the size of the Chambers I had hoped that we should have reached a greater measure of agreement than we have found possible during these last weeks. It has been made clear that there still are differences to be reconciled, not only differences between British India and the States, but differences between the bigger States and the smaller States, differences even between some members of the Chamber of Princes and other members of the Chamber of Princes.

I wish that we could have reached further agreement upon this difficult question. I am quite sure that we have got to come to a decision upon it in the early future. To day I would venture to say that, so far as the Government is concerned, we have come to the view that whatever may be the number of the Second Chamber, some system of grouping will have to be adopted. I would say further that we must await further discussions that are going to take place in India in, I hope, the comparatively near future, about the size of the Chambers. I hope they will succeed, but I would like to emphasise the fact that whether by the parties directly concerned, or whether, if they prefer it, by the British Government, a decision must be reached upon this point in the comparatively near future unless a great part of our future discussions is to be gravely impeded.

Then there was the question of the representation of the communities in the Centre particularly of the Muslim Community. There I think I can say definitely—I think I have said it indirectly very often before—that the Government consider that the Muslim Community should have a representation of 33 1/3 per cent of the British Indian seats in the Federal Chambers. So far as Indian India is concerned that must be a matter for arrangement between the communities affected and the India of the Princes. But so far as the British Government has any part in the question we will at any time give our good offices to making it as easy as possible for an arrangement between those parties in regard to future allocation of seats. There again I venture to say that definite to-day because I am anxious that that factor in the problem should not in any way impede the future progress in elaborating the further stages of the Constitution.

Now with all these Federal questions I can see that there is a grave anxiety in the minds of many members of the Conference—and I can sympathise with that anxiety—lest the various complications of which I have just given you certain instances should take too long to settle and that the Federation itself will drift into the dim distance and will cease to be a reality in practical politics.

Feeling that anxiety, Sir Tej Bahadur Sapru asked last night that a definite date should be placed in the Bill at which time the Federation should come into being. He qualified his request—and qualified it no doubt quite rightly—with the reservation that if the conditions were not fulfilled Parliament must have some means at its disposal for postponing the date of the Federation.

Now I agree with him that the last thing in the world that we wish to see the Federation drift into is being simply an idea and not an integral part of the Indian Constitution. But I think I ought to say that I do find a difficulty in agreeing, if indeed this is the time to agree or disagree—to anything in the nature of a definite date in the provision of the Act. The difficulties that are in my mind are twofold. I am not quite sure—and here I am speaking very candidly in the presence of representatives of the States—what reaction something that might appear to be rather in the nature of an ultimatum might have on the Indian States themselves.

Again, I find this difficulty, I feel the machinery of the Constitution will be of an extremely complicated nature, and I think that Parliament if it were confronted with a definite date might demand a longer interval and more cautious provisions than it would require if there were no fixed date. After all the machinery for bringing the Act into operation is going to be of a very complicated nature. I have always contemplated that some such method as a Parliamentary Resolution of both Houses would be adopted for bringing the Federation into operation and that that method would be adopted at the earliest possible opportunity.

What I can say to Sir Tej Bahadur Sapru is that we are going to do our utmost to remove every obstacle in the way of Federation and to remove it at the earliest possible date. Let me also say to him we do not intend to inaugurate any kind of provincial autonomy under conditions which might leave Federation to follow on as a mere contingency in the future. We shall as I say between now and the passage of the Bill do everything in our power—here I am speaking I think not only for the British Government but for the British delegation as a whole—to remove any obstacle that may at present stand in the way of the Federation coming into being at as early a date as possible.

Lastly let me say a word upon another side of this part of our discussions. For the last two years we have discussed the question of certain new Provinces. We have discussed the question of Sind from the very opening of our deliberations two years ago. Last year we discussed in detail for the first time the question of Orissa. Since those discussions we have had a great number of inquiries into both questions.

Based on your views upon the Reports of those enquiries based on your views still more on what appears to be a very general agreement both in India and in Great Britain we have come definitely to the conclusion that Sind and Orissa should both be separate Provinces. No doubt there will be details of machinery to settle and some of them of a rather complicated kind. For instance there are questions connected with the boundary of Orissa that have not yet been fully considered. But it is the definite intention of the Government that in any all India Federation both those great territories should enter as distinct Provinces.

Lord Chancellor: I have now dealt with the more prominent of the features of our discussions that emerge upon the more directly constitutional side of the Federation itself. Let me now turn to the other series of problems that in some cases affect more directly Great Britain and in other cases affect certain communities and certain interests in India itself. I mean by this all that chapter of questions that by a rough and ready phrase we have described as safeguards. Lord Chancellor let me say at the outset of my observations that I regard the safeguards not as a stone wall that blocks a road but as the hedges on each side that no good driver ever touches but that prevent people on a dark night falling into the ditch. They are not intended to obstruct a real transfer of responsible power. They are not intended to impede the day to day administration of any Indian Minister. They are rather ultimate controls that we hope will never need to be exercised for the greater reassurance of the world outside both in India and in Great Britain. Let me take the two instances that have been most prominent in this part of our discussions. Let me take the most difficult question of all the difficulty of a transfer of financial responsibility. There Lord Chancellor I am not disclosing any secret when I say that during the last twelve months the British Government have fully accepted the fact that there can be no effective transfer of responsibility unless there

is an effective transfer of financial responsibility. We have fully accepted that fact and we have done our best in the very difficult circumstances that have faced us to respond to the legitimate demand of every Indian politician for financial control with the legitimate demand of every one who is interested in finance not only for stability but for a situation in which there would not even be a suggestion that stability could be questioned. For in the field of finance it is not only the fact itself that matters but it is what people say about that fact.

Now our difficulties have arisen from two sources. In the first place there is the fact that as things are at present a large part of the Indian revenue has to be devoted to meeting the obligations that have grown up during these years of partnership between India and Great Britain. That in itself—and I am sure no one would question the justice of the point of view—makes people here, investors who invested their money in Indian securities, men and women whose families are interested in the meeting of the old obligations extremely nervous of any change. Secondly, there is the fact that we are passing through I suppose the most difficult financial crisis that has faced Asia and Europe for many generations. In the case of India there is a peculiar difficulty, namely that a large body of short-term loans raised under the name of the Secretary of State in London fall due for payment in the next six years. That means that if the Federation is to start with a good name, if its solvency is to be assured some means must be found for meeting these short-term maturities without impairing the future of Indian credit.

Lord Chancellor those are the hard facts that have faced the Government during the last twelve months. Those are the hard facts that we discussed in great detail and with great goodwill at the Financial Safeguards Committee. The British Government, the British delegation and sections of the Conference came to the view that in those conditions certain safeguards were absolutely necessary if we were to keep the confidence of the world outside and if we were to make it possible in the future for a Federal Government to raise money upon reasonable terms. That, gentlemen in a few sentences is the history of the safeguards. That, in particular, is the history of the safeguards that has loomed very largely in our discussions this year. The history of the Reserve Bank. We feel that if confidence is to be maintained in the financial stability and credit of India, a Reserve Bank must be in effective operation. Now our trouble has been—and it has been just as much a trouble for us as it has been for those members of the Conference who have been doubtful about this safeguard—that it is impossible to say exactly when a Reserve Bank of the kind that we all agree should be set up can come into effective operation.

What I can say—and I said it to the Committee and I say it again to this Conference—is that we will take every step within our control to make the setting up of a Reserve Bank of this kind and its successful operation effective as early as possible. We will devote all our energies to that end. If events over

which we have no control—namely, events connected with the world economic depression—are too strong for us, then I gave a pledge to the Committee and I give it again to the Conference, that we will meet representative Indians and will discuss with them what is the best step to meet that situation. I hope the situation will not arise. If it does arise we will take Indian opinion freely into our confidence and we will discuss with them what is the best step to be taken.

I come now to the question of Defence, a question that again has loomed very large and rightly so in our discussions. We had first of all as you all remember a debate in full Conference—a debate in which I think I may claim that there was complete unanimity that Defence until it can be transferred to Indian hands remains the sole responsibility of the Crown. It was however clear to me in the course of the discussions, and afterwards in an informal talk that I was able to have with certain leading members of the Conference, that there were differences of opinion as to the methods by which Indian political opinion might be consulted in the administration of the Reserved subject.

Sir Tej Sapru reverted to these questions in his speech last night. Well, gentlemen, I think that I can say that the British Government can go at any rate some way—I myself believe a considerable way—towards removing some of the anxieties that he and his friends feel.

Let me take in order two or three of the principal points to which he and his friends attached importance in these discussions. First of all there was the question of the discussion of the Defence Budget. We were all agreed that it should be non-votable. In the nature of things I think that was inevitable, but we are quite prepared to take the necessary steps to see that the Budget should be put, as he and his friends wish, in blocks, not in a perfunctory manner simply to be discussed as a whole.

Next he was anxious about the employment of Indian troops outside India without the approval of the Federal Government or the Federal Legislature. There I think he and his friends were agreed that where it was, actually a case of the defence of India, in which no Imperial considerations entered at all, the defence say, of the Frontier of India itself, where the responsibility—the sole responsibility—of the Crown should remain undivided. More difficult questions arose in cases where Indian troops might be employed for purposes other than directly Indian purposes. Now in those cases I can say to him I would prefer not to be precise as to the exact method. I myself feel sure that a means will be found to leave the decision in some manner to the Federal Ministry and to the Federal Legislature.

Next there was an important series of questions connected, first of all with the Indianisation of the Army that is to say, the greater participation of Indians themselves in the

defence of India and, secondly as to the bringing into consideration as much as possible the two sides of the Government. He and his friends were anxious that statutory provision should be made in some way for both these objects. The Lord Chancellor and the British Government still take the view, and we feel we must maintain it, that statutory provision is too inflexible, if you define statutory provision in the narrow sense. But I think I can meet him and his friends effectively by including directions to the Governor General in both these respects in the Instructions.

Now he said, quite rightly that his attitude towards that proposal would depend very much upon the Instructions themselves. As regards the Instructions we intend first of all to allude to them in the body of the Statute. And then we intend to ask Parliament to agree to a novel procedure but a procedure that I believe is well fitted to the conditions with which we are faced namely that before certain of them are submitted to His Majesty, both Houses of Parliament should have the opportunity of expressing their views upon them. The effect of that would be to give the Instructions a Statutory framework by the allusion in the Act itself, and to give them a Parliamentary framework by the Resolutions that would be passed approving of them before they are submitted for His Majesty's approval.

As to the other proposals that Sir Tej made in the matter of Defence, we still feel that the Governor General should have an unfettered power in selecting his Defence Minister, but we will make it quite clear in the Instructions that we wish the two sides of the Government to work in the close co-operation and that we do definitely contemplate—I would ask his attention to this point, and we will make an allusion to it in the Instructions—that, before the Estimates are actually put to the Federal Assembly the Finance Minister and no

doubt the Prime Minister should have an opportunity of seeing them and giving to the Governor General their views upon them.

I hope that I have said enough to show that if I have not been able to meet in the exact letter the wishes of Sir Tej and his friends we have been able to go some way and I believe myself that in actual practice we shall find the result will be very much the result that he and his friends desire, namely, that although the question of Defence is a reserved question with the sole responsibility for it imposed upon the Governor General as the representative of the Crown in actual practice there will be the closest co-operation between the two sides of the Government.

I am afraid that I have taken up a very long time at our last meeting, but I hope I have said enough to show not only to the Conference but to the world outside, the general outlines of the scheme that we intend to propose to the Joint Select Committee. But it is something more than a scheme upon which we have been engaged.

We have been planning a scheme and a very complicated scheme but we have also been trying to create a spirit of co-operation. Several members of the Conference were very kind to me last night when they said that I had played some small part in helping to foster this spirit of co-operation during the last few weeks. I thank them for what they said but I say that their kind words were really undeserved. The spirit of co-operation is due to much greater events and to much greater people than any with whom I am connected or any that I could ever hope to emulate.

Immediately after the conclusion of the Conference, His Majesty's Government, in pursuance of their pledges, proceeded to draft the White Paper incorporating their tentative conclusions.

The White Paper.

The proposals of His Majesty's Government for Indian constitutional reforms which are now under examination by a Joint Committee of Parliament were issued in March this year in the form of a White Paper. Though the intention is to speed up the necessary legislation no date is suggested in the White Paper for the actual change in the Indian system of Government. The Royal Proclamation inaugurating the new system shall not be issued until both Houses of Parliament have agreed on the date.

By the proposals put forward, the Provinces are given autonomy and to a Federal Government is conceded responsible government over the whole field of administration allotted to the Federation except in regard to certain reserved subjects. The Federation will consist of the autonomous provinces of British India, 11 in number, including the new Provinces of Sind and Orissa, and the Indian States. It will be brought about by the Princes surrendering a defined corpus of their present sovereign

rights to the Federation but retaining internal autonomy in respect of rights not so surrendered, unaffected by any other consideration than the existing suzerainty of the Crown.

It is a condition of the setting up the Federation—(1) That rulers of States representing not less than half the aggregate population of the Indian States and entitled to not less than half the State's seats in the Upper House of the Legislature shall have executed the necessary Instrument of Accession and (2) That a Reserve Bank free from political influence, will have been set up and already successfully operating. These conditions fulfilled it will rest with both Houses of Parliament to move the Crown by an address to issue a Royal Proclamation inaugurating the Federation.

Reserved Subjects.

The Governor-General and Viceroy will have a dual capacity Governor-General as head of the Federation, and Viceroy as conducting

relations with States outside the federal sphere. As Governor General he will be aided and advised by a Council of Ministers responsible to the Legislature in all matters save those concerned with the three Departments to be reserved to his personal administration namely Defence, External Affairs, and Ecclesiastical Affairs.

The Governor-General is also given a special responsibility for certain purposes—(1) The prevention of grave menace to the peace or tranquillity of India or any part thereof (2) The safeguarding of the legitimate interests of minorities (3) The safeguarding of the financial stability and credit of the Federation (4) The securing to the members of the Public Services of any rights provided for them by the Constitution and the safeguarding of their legitimate interests (5) The protection of the rights of any Indian State (6) The prevention of commercial discrimination (7) Any matter which affects the administration of the reserved departments.

In fulfilment of these special responsibilities the Governor General is empowered to act either without or contrary to the advice of his Ministers and can himself pass a Governor General's Act to secure any of these purposes and is given all powers to secure the necessary finance.

Apart from the reserved departments and these special responsibilities there is another category of prerogatives or powers the majority of them usually associated with the head of a Constitutional State the others to meet the particular conditions of India—

(a) The power to summon prorogue and dissolve the Legislature (b) The power to assent to or withhold assent from Bills or to reserve them for His Majesty's pleasure (c) The power to summon joint sessions of the two Houses of the Legislature in cases of urgency (d) The grant of previous sanction to the introduction of legislation—(1) Repealing amending or repugnant to any Act of Parliament extending to British India or any Governor-General's or Governor's Act or Ordinance (2) affecting any department reserved to the control of the Governor General (3) affecting coinage and currency of the Reserve Bank (4) affecting religion (5) affecting the procedure regulating criminal proceedings against European British subjects.

In case of emergency the Governor General also has certain Ordinance-making powers. In the event of a breakdown of the machinery of government he is empowered to assume full control. The system is continued under which expenditure connected with the reserved subjects is not subject to the vote of the Assembly. In regard to other finance he has power to restore any cut interfering with the carrying out of any of his special responsibilities. Various heads of expenditure will not be subject to the vote of the Legislature although they may be discussed. These include the loans service, the expenditure of the reserved departments and the salaries and pensions of the Indian Civil Service.

The special and wide powers thus conferred on the Governor General are by command conveyed in the Instrument of Instructions

given him by the King Emperor on assuming office, to be exercised only in special circumstances and not in everyday routine and normal circumstances except in the case of the reserved departments.

Federal Legislature

The Federal Legislature resembles the existing Central Legislature in composition and will consist of two Chambers—the Upper Chamber or Council of State consisting of 280 members, 100 appointed by the Princes, 150 elected by members of the Provincial Legislatures of British India and 10 nominated members the other the Lower Chamber or House of Assembly, consisting of 375 members of whom 125 will be appointed by the Princes and the others elected directly according to the seats allocated to each Province and to the several communities and interests in each Province. In the present British India Legislatures Chambers only a proportion of the members is elected.

The Legislature will be debarred from passing laws of a discriminatory character. In particular it will be unable to pass laws subjecting any British subject or company domiciled in the United Kingdom to any disability or discrimination in the exercise of certain specified rights if a British Indian subject or company would not be subjected in the United Kingdom to a disability or discrimination of a similar character.

The Provinces

In the Provinces certain subjects (Reserved subjects) have hitherto been administered by the Governor in Council and others (Transferred subjects) by the Governor and Ministers in the Legislature. But Governor like the Governor General, are given special responsibilities, with corresponding powers to discharge these responsibilities confined in scope of course to the Province.

The Provincial Legislatures are enlarged and the allocation of seats and method of election are in accordance with the provisions of His Majesty's Government's Communal Award of August 4 last. The present nominated members and official bloc disappear in favour of wholly elected Legislatures so far as the Lower Houses in the Provinces are concerned. In Bengal, the United Provinces, and Bihar the Legislatures will be bicameral with a small proportion of nominated members (not officials) in the Upper Chambers, in the other eight Provinces unicameral.

For the franchise for the Lower Chamber of the Federal Legislature the proposals lay down qualifications the effects of which should be to enfranchise between 2 and 3 per cent. of the population of British India and similar but lower qualifications for the franchise for the Provincial Legislatures should produce a Provincial electorate in the neighbourhood of 14 per cent. of the total population of British India or some 37 per cent. of the adult population. Women can vote for and will have seats reserved for them in both the Federal Assembly and Provincial Legislatures.

Public Services

The proposals confirm existing rights of the Public Services. The Secretary of State will continue to make appointments to the Indian Civil Service the Indian Police, and the Ecclesiastical Department, and the conditions of service of persons so appointed will be regulated by rules made by the Secretary of State. He will determine the number and character of such appointments and may prohibit the filling of any post declared to be a reserved post otherwise than by the appointment of a person appointed by the Crown the Secretary of State or the Secretary of State in Council.

At the expiry of five years from the commencement of the Constitution Act a statutory inquiry will be held into the question of future recruitment for the Indian Civil Service Indian Police and the Medical and Railway services and the Governments in India will be associated with the inquiry. The decision on the results of the inquiry will rest with His Majesty's Government and will be subject to the approval of both Houses of Parliament. Pending the decision on

this inquiry, the present ratio of British to Indian recruitment will remain unaltered. The administration of the Railways is by a Statutory Railway Board so composed as not to be subject to political interference.

The Secretary of State's Council for India is abolished and its place is taken by not less than three and not more than six advisers to be consulted as the Secretary of State may think fit, except that their concurrence is required in relation to certain service matters.

A Federal Court with both an Original and Appellate jurisdiction in cases raising constitutional issues such as the spheres of the Federal, Provincial and States authorities is set up and power is given to establish a Supreme Court to act as a Court of Appeal in British India.

It has not been possible to include Burma in the proposals as Burma has delayed a decision as to whether it wishes to be separated from India in accordance with the constitution outlined for it at the close of the Burma Round Table Conference or to remain a Province of India.

The Indian Legislature.

The annual winter session of the Indian Legislature in New Delhi commenced on 25th January and was inaugurated by H.E. the Viceroy. His Excellency in the course of his address announced that it would not be necessary on the annual Budget Day (1 March) to introduce proposals increasing the taxation provisions made in the 18-months Budget laid before the Legislature in September 1931. He emphasized that the financial situation was sound and healthy and compared most favourably with that of any other country and that there were grounds for hope and optimism in regard to the future.

His Excellency dwelt at length with the current controversy over the continued Export of Gold Bullion, saying India is able to tap a portion of her own vast resources and by parting with a very small fraction of her immeasurable stores of gold to realise a favourable balance of international payments. The good results of this are already apparent—a strengthening of our exchange—an easing of our bank rate—and the accumulation of sterling resources which have already enabled us to pay off £ 16 millions sterling without borrowing and thus relieve the country of a capital charge of Rs. 20 crores and a recurrent charge of 110 lakhs per annum. These are only a few of the public advantages and they are combined

with private profit. Why should the country not be left free to reap this advantage? A time has indeed come when India's huge investments in gold which have for many years been barren and unproductive—are proving profitable to the private holders and to the State alike. I would further remind you that the export of gold is no new feature in India's commercial life.

The Viceroy dealt at length also with the general political situation. He spoke of the Delhi Pact between Lord Irwin and Mr. Gandhi and said: "It was soon clear to myself and my colleagues that the attitude assumed by Congress throughout the country was to regard the Settlement not as a settlement at all, but as a means for consolidating their position and for making preparations for a further attack on constitutional authority." On the other side, said His Excellency, "There has been no lack of good will on my part or on that of my Government. I have appealed for co-operation personally from the leader of the Congress Party and many of his followers. I begged them to join in a common effort to secure as rapidly as possible responsibility for Indians to administer their affairs. I am conscious of no deviation by myself or my Government from the path of conciliation until Congress had themselves wantonly torn up the path."

The Viceroy spoke of the repressive measures which were taken when Congress thus made them essential and said, "Once those measures were taken, it is clear that they could not be suspended or withdrawn unless the activities that had made them necessary were definitely abandoned. The reply of Congress was a declaration of their purpose to extend their activities throughout the length and breadth of India and by a revival of civil disobedience to cripple the administration. No Government worth the name could hesitate to accept the challenge. Failure to do so would indeed make all Government in this country impossible. There must be no room for misander standing either on the part of the public or of those who choose to disobey the law. There can be no compromise in this matter. I and my Government are determined to use to the full the resources of the State in fighting and defeating a movement which would otherwise remain a perpetual menace to orderly government and individual liberty."

His Excellency appealed to the Legislature and to the public for their support, and passed on to discuss the various committees and other activities proceeding in connection with constitutional reform especially with the early institutions of representative government in the North West Frontier Province.

The first general business debated during the session was a motion by the deputy leader of the party on the Left of the House for an adjournment, to censure Government for their recent arrest and internment of Mr. Gandhi. The motion was not moved because Government promised a special day for the discussion of the subject. Accordingly a few days later Sir Hari Singh Gour as leader of the Nationalist party and of the Indian non-official benches, moved a long resolution drastically criticising Government for their action against Mr. Gandhi and in related matters.

The Home Member (the Hon. Sir James Craik) speaking immediately after the making of the motion, said "The policy of Government in the first instance, is to take up the challenge which has been quite unnecessarily quite unwarrantably thrown down, a challenge to all forms of ordered Government and to any ordered form of society. This must be the continuous and consistent policy of any Government, but it is more than a policy, it represents a primary and most important reason for the existence of any government at all. In taking up that challenge and in dealing with it all the powers at our command in the performance of our responsibility we are, I say discharging not only a duty which primarily rests upon us as a Government to the people and the public of India at the present time, but we are equally discharging a trust for the future, whatever Government may hereafter subsist in this land. The second part of the policy of Government is to prosecute the advancement of political and constitutional advance and in order to carry on that policy to secure the widest measure of agreement and the greatest measure of co-operation from every interest, from every organisation from every individual in India

who is prepared to contribute constructively to that end."

Sir James showed that the leaders of the Congress Party have always been perfectly plain in the exposition of their position namely that their programme, their campaign, is directed to subvert the existing system of government. In illustration of the point he quoted the following extract from a Congress publication now appearing surreptitiously in Bombay city, the date in this case being 20th January. The programme of the Congress is the complete overthrow of the British power in India and capturing the power for the toiling masses of India. It is a fight to the finish and no quarter will be given to our foes or their allies viz. those Princes, aristocrats, zamindars, capitalists and others who have joined hands with the British Imperialism with a view to exploit the Indian peasants and workers. We the Congress, stand for complete independence and the war shall end when we get it. Till the fight goes on we shall fight on with non-violence as our only shield and we shall expect the country to stand with us through that war. We shall not confer with the British Imperialism until it bends its knees and sees the Congress for peace. It was said the Home Member in face of threats of that kind in face of action adopted to carry out threats of that kind, that Government had felt compelled to resort to the extraordinary legislation represented by the Ordinances—And I desire to say this that in proportion as those powers are drastic so we recognise the necessity that they shall be administered with the strictest discipline and with the strictest moderation and restraint.

A remarkable speech during the debate was one by Sir Hugh Cooke leader of the non-official European Group, in which he briefly reviewed the policy of "friendly discussion and of government by conference and discussion" by which Government had hitherto been sought to deal with the Congress party and said "But looking back, I have no doubt in my own mind that these efforts at friendliness have not been successful and that Government have now got to govern with a firmer hand bearing in mind as the Home Member has said this morning that they are trustees to hand over India to a new form of government within a comparatively short time and if that India is handed over with a great lack of respect for Government I am afraid the new constitution will start with great difficulty and will fall on evil days."

The debate continued throughout two days. Elected Indian members were divided in their attitude. The speeches were sometimes heated. The final division went in favour of Government by 62 votes to 44 figures which show an unusually large attendance in the House.

Two months later, on 1st April, a Sikh elected member moved the adjournment of the House in order to censure Government for a reply given by the leader of the House, showing that the constitutional reforms were being expedited with Mr. Gandhi and other Congress leaders.

still in jail. The burden of the mover's speech was that Mahatma Gandhi is the only person who can deliver the goods and Government will be well advised to do nothing of a decisive nature without first settling about the question of reforms with him as the representative of that great organisation the Congress. The supporters of the censure finding that the general sense of the House was against them eventually tried to talk it out, but a division was precipitated by a censure motion which with the help of the Government vote, was carried by 48 to 84. The Sikh member who moved the adjournment did not reply to the debate when called upon to do so and the motion was thereupon rejected without division.

The policy of Government towards Congress and its leader Mr. Gandhi in relation to its policy of civil disobedience, again arose on various occasions during the autumn session of the Legislature in Simla. It was first mentioned by H. E. the Viceroy in an address with which he opened the sittings of the Assembly. Over the greater part of India (said His Excellency) the mass of the population is no longer concerned with civil disobedience and so far as they reflect on the matter at all there is a feeling of relief that measures have been taken which have restored a sense of security and peace. The number of those in jail in connection with the movement was, the Viceroy showed, rapidly diminishing. His Excellency continued, I do not wish to suggest for a moment that the civil disobedience movement is finished or that it does not still remain a very definite menace against which we cannot afford to relax our precautions. The Congress is an extensive organisation which commands even outside its own ranks a certain degree of sympathy among many of the educated classes. It is still pledged to the policy of civil disobedience and is doing what it can to maintain the struggle. It would be rash to prophesy how long it will be before the Congress leaders realise or at any rate bring themselves to acknowledge openly that they have failed. But to us it is by this time abundantly clear that the movement cannot succeed so long as Government maintain its existing policy.

The Viceroy reminded the House that the consolidated Ordinance with which Government had been dealing with civil disobedience, was due to expire at the end of the year and His Excellency announced that Government would present to the Legislature a measure to strengthen the general law by the inclusion in it of a considerable number of the provisions of the Ordinance. We regard this measure as essential not only for the purpose of bringing to an end the present civil disobedience movement but as an insurance against the revival of any similar activities in the future. The Provincial Governments, he said, would bring in similar legislation, which would reproduce other provisions of the Ordinance.

The general question was raised in the Assembly on 15th September by a motion by Mr. Banga Iyer, Deputy Leader of the Nationalist Party, for the adjournment of the House

in order to condemn the action of the Secretary of State in rejecting Mr. Gandhi's application for sanction of his release in order that he might better prosecute his anti-untouchability campaign. It was argued against the motion that Mr. Gandhi's intention, if he was released, was to apply direct action to secure from Government and the public the application of his own prescription for dealing with the depressed classes under the forthcoming Constitutional Reforms. The motion was talked out.

The Home Member (Sir Harry Haig) two days later made a brief statement in reference to a statement made by Mr. Gandhi, in a letter to the Prime Minister, that he was proposing to starve himself to death not as a protest against his detention in prison or with the object of securing his release but on a point of principle not connected with the civil disobedience movement. Sir Harry Haig added:

It has been decided that as soon as Mr. Gandhi actually begins his fast he should be removed from the jail to a suitable place of private residence and the only restriction that will be imposed on him there as at present contemplated is that he should be served with an order directing him to remain there. We hope it will prove unnecessary to impose any further restrictions on Mr. Gandhi but this is a matter that will depend primarily on whether liberty accorded to him is found to lead itself to the promotion of the civil disobedience movement or any similar agitation directed against the Government or to affect the maintenance of law and order.

The Home Member on 15th September introduced in the Assembly a Criminal Law Amendment Bill to place upon the Statute Book the measure foreshadowed by the Viceroy for converting provisions of the emergency ordinances into permanent law. Throughout a considerable part of the remainder of the session there continued prolonged debates on his subsequent motion to refer the Bill to Select Committee. Government emphasised that the aim of the Bill was to restrain the civil disobedience movement, a movement not only fraught with troubles to the existing administration but calculated if unchecked gravely to hamper the successful introduction in the near future of the reforms intended to transfer power from the existing government to one more dependent on the elected representatives of the people. We are not playing a game with artificial rules (said the Home Member), the question is whether the Congress is going to impose its will on the whole country and dictate the Constitution. On that issue so far as Government is concerned there is no time limit.

Sir Harry Haig quoted from Mr. Gandhi's recent letter to the Secretary of State a sentence in which he wrote that the way to arrest the embitterment of the relations between the British and Indian peoples was 'Not by stopping civil disobedience for now it is an article of faith.' The Home Member went on, 'Well, sir, it is possible that that gives the clue to the action that has been pursued in the last two

years. Where faith comes in, reason goes out and it may be that Mr. Gandhi has been hypnotised by the previous success of a particular method. But sir in my judgment we must prove to the people that civil disobedience is not a panacea for political problems. We must show them that it is a discredited political weapon and we must endeavour to break that faith.

In the end various dilatory motions get forward by the benches on the Left, to stave off a critical vote on the principle of the Bill which they feared would go in favour of Government. were defeated by majorities of approximately two to one and the reference to Select Committee was carried by 64 to 32. The Select Committee being instructed to report by 1st November.

The Budget.
